CONGRESS JUST CUT DOCTORS' RETIREMENT SECURITY BY $34,000 A YEAR– AND WANTS $2,700 MORE IN TAXES NOW.

Harry R. Tyler, Principal

Last year, Congress cut 36% from your retirement plan[1]. That means higher income taxes now[2], less money in your retirement fund to grow–and $34,000 less annual income when you retire[3].

The impact on your retirement will be dramatic–unless you act now. To have $100,000 a year of retirement income you will need at least $1.3 million in retirement assets[4].

Find out how you can protect your retirement security and increase your own plan contributions–without increasing contributions or costs for other employees.

Call 1-800-79-TYLER for a free copy of the Tyler Consulting Physician Retirement Security Checkup–including a 20-page booklet entitled, "Building a Secure Future." Call today.

TYLER Consulting Incorporated

GOSHEN EXECUTIVE CENTER • SUITE 200C • 1450 EAST BOOT ROAD • WEST CHESTER, PA 19380
1-800-79-TYLER
(610) 344-0900 FAX: (610) 344-7656

The following assumptions are based on a physician age 45; earning between $140-250,000 per year; retiring at age 65; annual investment growth of 10%; and a 20 year payout (8%) at retirement.

1. Beginning 1/1/94, maximum compensation eligible for contribution to a profit-sharing plan is $150,000–36% less than $235,840 before. Instead of a $30,000 contribution, only $22,500 can be contributed–7,500 less annually.
2. $7,500 additional income is taxed at 36% (marginal tax bracket based on $140-250K of taxable income.) The annual increase in your tax is $2,700.
3. $7,500 less is invested for 20 years. Assuming 10% annual return, your retirement fund is reduced by $429,000– cutting retirement security by $34,000 every year.
4. To maintain a $100,000 income (inflation-adjusted at 4%) for 20 years requires $1,348,674 in retirement assets.

What Has the Federation of Medicine Done for You Lately?
See page 22 for a recap of the "victories" recently won by your State Society and the Federation of Medicine.

SOMETIMES THE BEST DEAL IS THE ONE YOU HAVEN'T HEARD ABOUT.

Maybe you haven't heard about the Medical Inter-Insurance Exchange (MIIX). After all, we're a relatively new player in Pennsylvania's medical professional liability insurance marketplace.

But ask your counterparts in New Jersey, and you'll find we've been getting rave reviews since we wrote our first policy there in 1977. We're proud that 98 percent of our 9,000 insured physicians renew their policies each and every year. With such an outstanding track record, we must be doing something right.

Perhaps it's our **innovative products**, such as our new **$500,000** HIV benefit that provides income protection — at no additional charge — for physicians who become HIV positive. We were the first professional liability insurer in the state of Pennsylvania to offer this coverage.

Or maybe it's our **commitment to service**, which includes 24-hour customer assistance and a claims staff that's the best in the industry. Our insureds know that MIIX makes sense financially, too, considering our outstanding discounts for new and part-time practitioners. We also offer flexible premium payment plans that help you manage your money.

Because MIIX is a **physician-owned company**, you can be assured that everything we do is designed with your best interests in mind. Call us today so you can join your peers who are already benefiting from the MIIX difference.

Women in Medicine: A Brighter Future for All

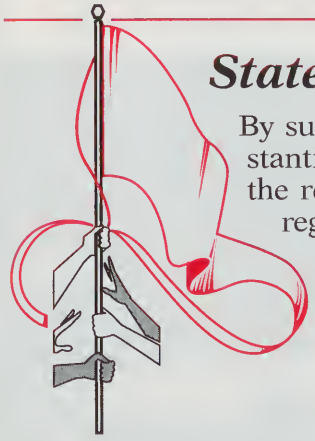
The American Medical Association designates each September as Women in Medicine Month—a time to celebrate the achievements of women physicians and to promote the increasing opportunities for women in organized medicine and the profession. Coverage includes:

12 Things Are Looking Up
Interviews with three Pennsylvania women in medicine

16 Women Physicians on the Move
A look at AMA statistics

18 Women's Health and Medical Education: Seeking Balance
An overview of a pioneering program in Pennsylvania to improve health care to women

52 Commentary: A Call for Change
The role of women in organized medicine



State Society Scores Wins

By summer's end, the Society had tallied substantial savings for Pennsylvania physicians as the result of several hard-fought judicial and regulatory battles. For a recap, see page 22; for commentary, see page 6.

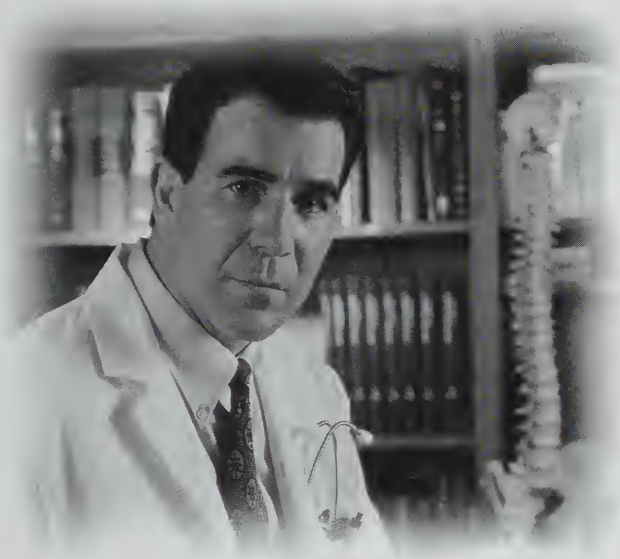
"Promises.

Every company makes them. Few keep them. Pennsylvania physicians



are lucky to have a resource like PMSLIC. I know. Early in my career I practiced in the Midwest. I saw colleagues get burned by a company promising the same medical liability protection for less money. I was pretty young, but luckily I didn't go with them. Unfortunately, my best friend, Phil, did. When his carrier went under, it looked as though a lot of good people would go down with it. Phil just got out by the skin of his teeth. A couple of our friends weren't so lucky. When I came to Pennsylvania, I checked out all my options. Know what? No company can match PMSLIC's record, or offer the same value-added services. Through the years, we've all heard many new carriers guarantee us big savings. But I can't see the value of saving a few dollars in the short run, if it means risking my future. Hey, if you don't believe me, give Phil a call." ❞

NEW LAW REQUIRES MEDICAL EVALUATION OF SOME MA RECIPIENTS: Physicians who treat Medical Assistance (MA) patients should be aware of a new state law adopted in June that will cut benefits for about 29,000 people—45 to 65 years old—unless they can prove they have a serious mental or physical handicap that prevents them from working. To be eligible for assistance, a patient and his or her physician must fill out a "Medical Assessment Form," stating limits to the kind of work recipients can perform. Specific instructions are included on the form; direct further questions to the MA provider hotline, (800) 537-8862.

SUPPORT FOR PATIENT PROTECTION ACT REITERATED: The Society on August 29 agreed to participate in a coalition letter to U.S. senators reiterating support for Senate Bill 2196, the Patient Protection Act. State medical societies were asked to join more than 60 patient advocacy groups strongly urging support of the bill, which addresses issues of patient choice, physician selection, and utilization review. The Senate is expected to resume reform discussions mid-month.

SOCIETY PRESIDENT TESTIFIES ON ANY WILLING PROVIDER ISSUE: Society President Martin A. Murcek, MD, testified on the "any willing provider" issue at a joint hearing of the House Insurance Committee and the Senate Public Health and Welfare Committee on August 23 in Pittsburgh. "At the heart of this issue is the question of the fundamental right of patients to have a voice in choosing who keeps them well and who treats their illnesses," he said. "At the same time, efforts to reduce costs to the health care bottom line are coming more and more into conflict with patient interests." He added, "Instead of extreme solutions, we should build on the points upon which everyone can agree"—access, quality, and freedom of choice. Dr. Murcek offered the Society's assistance to work to reach a compromise.

COMMENTS ON WORKERS' COMP REGS REFLECT MEMBER CONCERNS: The majority of Society comments sent in August to the Department of Labor and Industry on regulations proposed to implement the medical cost containment provisions of the Workers' Compensation Act of 1993 reflect physician reports of actions by insurers to delay, reduce, or deny payment for services already provided to injured workers covered under the act. Generally, the Society supports the draft regulations, which are the result of ongoing dialogue between the Society, other provider groups, and the department. However, it will continue to work with other provider groups as the department reviews comments received and determines whether to incorporate them into the regulations.

FORUM AT ANNUAL MEETING TO FOCUS ON MANAGED CARE ISSUES: In conjunction with the 1994 annual meeting of its House of Delegates, the State Society will present a special forum on the movement to managed care, capitation, and risk sharing. The annual meeting will be held October 21-23 at the Hershey Lodge and Convention Center. The forum, scheduled from 4:30 to 5:30 p.m. on October 21, will include a short program, followed by a question-and-answer session.

HMSS TO HOLD TWENTY-FIRST ASSEMBLY: The Society's Hospital Medical Staff Section will hold its Twenty-First Assembly Meeting from 9:00 a.m. to 12:30 p.m. on October 20 in Hershey. The morning session will include section business and an open forum; an optional seminar on building effective coalitions is scheduled in the afternoon. For information or to register, call (800) 228-7823, ext. 457 or 461.

AMA OFFERS TOLL-FREE HOTLINE ON REFORM: The AMA has created a toll-free hotline offering physicians daily updates on the status of health system reform in Congress. Callers will hear a message describing floor activity and its impact on organized medicine. Also, physicians will be encouraged to contact their senators and representatives to seek support for organized medicine. To access the hotline, call (800) 833-6354.

The Tangibles of Membership

John W. Mills, MD
Medical Editor

By now you've probably read about the string of major league victories for Pennsylvania physicians which our State Society and the AMA recently won. In the aggregate, they amount to a savings to Pennsylvania physicians of more than $30 million.

They are:

• *The clinical laboratory overpayment issue,* argued successfully by the AMA/State Society legal counsel: The ruling agrees with our contention that federal law requires that if an error is made by the carrier (Pennsylvania Blue Shield in this case) and physicians are not "at fault," the physicians need not repay overpayments. To Pennsylvania physicians, **victory is worth $1.3 million, in addition to $3 million** the Health Care Financing Administration (HCFA) had already agreed to forego in earlier discussions.

• *State Society v. Snider, secretary of the Department of Public Welfare (DPW):* Compels DPW and HCFA to pay coinsurance deductibles for low-income elderly who are eligible for both Medicare and Medicaid. This decision overturns a November opinion in Federal District Court, and is similar to a federal appellate court ruling in a New York state case. **Victory is worth $25-$45 million annually** to Pennsylvania physicians.

• *Boettcher v. King:* The state Supreme Court ruled that the Catastrophe Loss Fund (CAT Fund) must pay post-judgment interest on its portion of judments not paid promptly. The State Society had argued in an *amicus* brief that physicians should not be responsible for the interest. **Victory is protection of physicians' assets.**

Thus, after a long "dry spell," Pennsylvania physicians have reason to rejoice in their membership in the AMA and the State Society. There *is* strength in numbers. Consolidating our front is sure to make an impact in health system reform and other issues facing our profession.

Couple these victories with your Board of Trustees' decision at its recent retreat, and we should have an even more effective organization. The board approved a plan to begin changing the Society from a "member-driven" organization into a "member*ship*-driven" organization (see page 38).

The single most important factor in a successful organization of any type is the input of the members, followed closely by how that input is used by the organizational hierarchy. Obviously, output from the organization has to be effectively disseminated to the members. This is, then, in simple terms, a real two-way informational highway.

While the board unanimously supports the "membership-driven process" concept, we are studying ways to get members—YOU—to become a more effective force on the two-way informational highway.

Look at the basics: You assimilate the information we send to you by mail, fax, phone, or computer—either read it or hear it. Then, after your integrated thought process, you must communicate your opinions, reactions, evaluations, concerns, and critiques to us, via mail, phone, fax, or computer. We in turn respond to you, and the process goes on.

We accept the responsibility for building this highway—a lot of work on our part. But work is also involved on *your* part, and unless you are willing to do that work, we will not have a successful membership-driven Society.

The other major outcome of our retreat was to seriously consider the makeup of our organization—councils, commissions, task forces, departments, etc.—and our House of Delegates' representation in relation to geographic concerns and physician numbers. We need to address these issues with sincerity and careful thought in order to make our whole Society more effective for the twenty-first century.

You will be hearing about all of this very soon—and I ask your indulgence *and input* as we try to assemble a more effective—more tangible—state medical society. Remember, the membership-driven process yields benefits; but we need all of you to help keep us focused and working in concert. Let's avoid "self" and personal agendas.

The List Is Long Indeed

Martin A. Murcek, MD

One of the things that Representative Fortney "Pete" Stark (D-CA), the most physician-friendly member of Congress, likes to say is that the AMA doesn't represent the majority of physicians in America. Unfortunately, by a slim margin, he's right. Only 42 percent of the nation's physicians are AMA members.

Of course, those who are not members benefit from much of the work the AMA does. Though they may disagree with some of the AMA's positions on particular matters, make no mistake, they have benefited from initiatives and lobbying funded by the AMA membership.

Around the state, I've heard from some physicians who are opposed to what is commonly called "unification," or—I prefer this designation—the Federation. The Federation is the combination of your county medical society, the Pennsylvania Medical Society, and the AMA all working in concert to represent the interests of physicians locally, across the state, and across the nation.

There is a faction in some areas of the commonwealth that opposes unification. A variety of reasons are given—some valid, some not.

Many physicians say that the combined county, state, and AMA dues are simply too much, especially for a young physician just starting out with perhaps a huge amount of debt related to tuition loans. I can't dismiss that argument out of hand, but I urge you to look at it as more than just a "money matter."

Those who believe deunification would help bring back lost members for their county societies are simply mistaken. At the State Society board's retreat in July, guest speaker Henry L. Ernstthal noted that the percentage of "joiners" in society as a whole is down. The fact is, fewer people join organizations nowadays. Trying to recarve the pie won't change the fact that it is a smaller pie today.

Nonetheless, those who have joined and supported the AMA have played a key role in keeping the physician's voice heard in the health system reform debate. Despite the Clintons' wishes that if ignored, the AMA would go away, the biggest force in organized medicine continued to make sure that American physicians' interests were not swept aside by Hillary Rodham Clinton's "secret council."

"Those who believe deunification would help bring back lost members for their county societies are simply mistaken."

When a physician asks me, "What does the AMA do for me?" I have to respond, "How much time do you have?" There's a big risk I might overlook something important, because the list of things the AMA is doing for physicians is long indeed.

As to the assertion that the AMA is "too distant," I can only respond, "How much clout does your county society have with the California congressional delegation?"

In truth, the AMA is only as distant as your nearest state delegate, and there are 24 delegates and 24 alternates in Pennsylvania.

I've devoted most of my time in organized medicine to the State Society and to my specialty societies, but during my year as president, I've gotten a better understanding of what the AMA is doing for *all* doctors across the state.

I can't urge you enough to support the Federation. You do get a lot of value for all those dues.

ou're on solid ground with the Dodson Plan.

More than 75 years ago, Bruce Dodson, Sr. pioneered the concept of the dividend plan for workers' compensation insurance. Dodson Group has been helping businesses like yours save on premium costs ever since.

The Dodson Plan gives you the opportunity to earn a dividend each year, depending on the claim experience of all insured members. We carefully select those who participate, creating the greatest potential for you to save.

Pennsylvania Medical Society endorsed the Dodson Plan in 1973. Since then, participating members have earned a total of **$2,309,240** in dividends. Share in the savings!

You're on solid ground with Dodson.

LETTERS TO THE EDITOR

DISPUTE SPARKS FINAL COMMENTS

In their exchange of letters regarding the HCFA "Single Statewide Charge Class" conflict [PENNSYLVANIA MEDICINE, June 1994], Drs. William Frankl and John Mills probed how best to unify the Society. As painful—and, some would say, unnecessary—as was this process, it provided lessons to be re-learned by *all* physicians (and not just Society leaders):

1) *Motivated* people can act effectively from their own perspectives.

2) It's folly to adopt a position which overtly benefits one subset of the membership at the *expense* of another.

3) It's unwise to adopt a policy which clearly has financial underpinnings; sometimes, it's best *not* to act.

4) It's risky to allow the House to shout-down a delegate (myself) who (correctly) notes a deviation from proper parliamentary procedure, and then not to rectify the error (here, the need to *vote* whether to hold a secret ballot).

5) One aspect of the Society's structure requires restudy: To Dr. Mills, "The House of Delegates is responsible only to their county constituencies." This consideration must be *relegated* below the need to "continually reflect on its responsibility to...all Pennsylvania physicians."

Dr. Frankl's letter was unanimously endorsed by the Philadelphia County Medical Society board (at my behest) because (in my judgment) we feel that this event (and its causes) must be put behind us, ASAP. There are already *enough* external threats to our medical professionalism which require ongoing diagnostic/therapeutic "management." There mustn't be divisiveness within the House of Medicine!

Robert B. Sklaroff, MD
Member, State Society House of Delegates
Member, PCMS Board of Directors

SEN. DOLE'S REFORM BILL SUPPORTED IN PHILADELPHIA

Editor's Note: This letter was delivered via telegram to Senator Robert Dole (R-KS) on July 31, 1994. The author forwarded a copy to PENNSYLVANIA MEDICINE in an effort to share his thoughts with his colleagues statewide.

Dear Senator Dole:

I've been a long-time supporter of yours. Now, you have assumed the role of savior of the American medical structure.

The bill you have introduced on health care change is excellent! The Clinton, Gephardt, and related approaches are disastrous. There can be no compromise between your approach and theirs. They advocate employer mandates, so-called universal coverage, massive tax increases, massive federal intervention and penalties, decline in quality of medical care, and rationing, among other undesirable features. There can be no compromise with these. The American people and the health professions are hoping and praying you will give leadership to your health program and will defeat the Clinton, Gephardt, and related bills as they should be.

Respectfully and with admiration,
Paul S. Friedman, MD
Past President
Philadelphia County Medical Society

The editors of PENNSYLVANIA MEDICINE encourage comments about the magazine and its contents, as well as viewpoints on current medical issues. Remember—comments do not have to be negative! What has your county or State Society, or the AMA, done for you lately that you *approve* of? **See this issue's editorial on page 6 for more reasons why we need to hear from you.** Please send letters to:

Managing Editor

Pennsylvania Medical Society

500 FISHING CREEK VALLEY ROAD

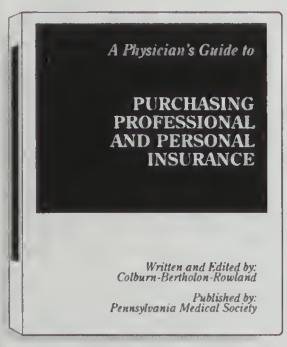
Located across from the Country Club of Harrisburg on 4 private, secluded acres of towering trees, mature landscaping & lush gardens. Never before offered for sale, this classic 2-story manor home can best be described as elegant and stately. Offering 5 spacious bedrooms and 3 full baths on the second floor, there is also a huge attic. Spacious living room with FP, library with FP, very formal dining room, lovely country kitchen & powder room complete the first floor. Lower level offers walk-out private entrance from nanny quarters or office complete with full bath.

If privacy & seclusion are important to you, yet you need a convenient location to your office or business, this home may be the home for you.
Offered at $675,000.

For additional information call
William T. Bitner, G.R.I., C.R.B.,
at 717-652-1400 or 717-939-1650.

The Homestead Group

If you're looking for the right group practice coverage, why not ask the people who wrote the book on it?



When they needed to know about insuring you and your group practice, the Pennsylvania Medical Society didn't just want us to act as a guide.

They asked us to write it.

We're Colburn-Bertholon-Rowland (CBR). The endorsed broker for the Pennsylvania Medical Society. And while "A Physician's Guide to Purchasing Professional and Personal Insurance" isn't the catchiest title, if you're up against the complex issues of insuring a group practice, you'll want it on your bookshelf. It deals with everything from life insurance to disability coverage to professional liability insurance. Oh, and health coverage. Homeowner's insurance. Even long-term care. And there's a lot more to it.

Endorsed by the PA Med. Society

And with CBR, there's a lot behind it. We've spent the last 65 years giving doctors our expertise on all forms of insurance and group benefits.

When it comes to individual and group practice insurance, we're the people to call on.

If this sounds like the kind of help you can use, call us at 800-551-4504 (Media) or 800-327-1550 (Pittsburgh). Your CBR rep will do more than give you a hand. The first time you meet you'll receive our book – a $30 value – *free*. And if you want more answers, just ask.

Things Are Looking Up

Maria T. Montesano
Assistant Managing Editor

This month, the State Society along with the AMA is celebrating Women in Medicine Month and the theme, "Women Physicians on the Move," which recognizes the increasing number of women physicians in leadership positions. In this article, we talk with three of those women, who agree that "things are looking up" for them, their female colleagues, and future women in medicine.

No one really wants to admit that "women in medicine" is an issue; yet, women physicians from across the commonwealth can't seem to deny it either. Statistics and experience show inequities for women physicians in pay, advancement, family responsibilities, and most importantly, respect from colleagues. But the good news is that change is being noticed by many, and the future is sure to be brighter for all.

Women physicians now comprise close to 20 percent of all U.S. physicians and nearly 40 percent of all medical students, according to the AMA. Those numbers are consistent in Pennsylvania, and, in fact, the Medical College of Pennsylvania, Philadelphia, is one of only 10 medical schools nationwide with more than 50 percent women already. That trend is not expected nationwide until well into the next century.

Yet, while the numbers increase (see chart, next page), a 1993 study shows that more than 50 percent of women physicians still experience regular gender discrimination.[1] So, we ask, Is 'women in medicine' an issue or not?

Experience is key

Carol E. Rose, MD, a Pittsburgh anesthesiologist and member of the State Society's Board of Trustees, says she never used to think "women in medicine" was an issue. "I don't act or say things because I'm a woman, or at least I don't think I do. In return, I like to think that my colleagues and patients respond to me as a physician and not a woman...I've always thought of myself as a physician who happens to be a woman."

Dr. Rose says it's only recently that she's become aware of being treated or responded to differently because of being a woman. She relays two specific experiences.

"With the first case, I wanted to discuss a situation with a surgeon regarding his treatment of a patient," Dr. Rose says. "I was quite upset, and he responded by walking away from me, saying 'I can see that you're upset; we'll finish this conversation when you've calmed down.' But I insisted that we talk about the issue; and we also talked about he fact that he walked away from me. He said that was what he does when his wife gets upset—he just walks away from her. In other words, he was reacting to me as a woman and not as a physician colleague. Boy, did that hit me right between the eyes."

The second experience occurred in the operating room, she says. "I asked a surgeon not to approach the patient until I had taken care of certain monitoring equipment, and he ignored my request. I said, 'Doctor, I asked you not to do that, and I really meant it.' After the case was over, he came over, put his hands on his hips, and said, 'Sweetie, nobody's ever spoken to me like that before...especially not somebody who is as junior as you are.' Since my hair was covered, he

didn't see my gray hair. So I turned to him and put my hands on my hips and said, 'To start out with, I'm not your sweetie.' I then went on to discuss the rest of it with him. He seemed shocked."

One step forward

Dr. Rose says she was quite distressed by those events. "It occurred to me that I have been ignoring this for years—ignoring the woman in me as far as being a physician, and I decided it was time to do something about it." The mentoring program for women medical students of the University of Pittsburgh, with which she was already involved, has now taken on even greater importance for her.

"The program is intentionally unstructured." She explains, "We agree to be there when the students need us; and occasionally, the women faculty in my department will get together with our medical students and have group talk sessions where we all share our experiences." More importantly, she adds, they also share solutions.

"I thought it would be nice to have an association with medical students, and medical students who happen to be women was perhaps a second issue," she says. "I've gotten very, very positive feedback from the women medical students who really seem to feel that there is a need for this program, so obviously 'women in medicine' is an issue to them, even if it hasn't been an issue for me until recently."

The status achieved by male versus female physicians has remained an issue throughout the years. The AMA has said part of the reason women physicians do not achieve the same status as men physicians is because women lack mentors and peer networks,[2] but Dr. Rose says it's obvious that programs such as the one at the Pitt are a step forward.

Medicine's effort

Another step is that being made by organized medicine. "When I first became active in the State Society and attended my first House of Delegates meeting," Dr. Rose says, "there was no question in my mind that it was an 'old boys' club,' as many have asserted, especially in the handling of issues. I must say, however, that I never was treated as being a women first and then a member of the delegation. I always received full respect and consideration. So, I do believe that there was an element of 'the old boys club' back then, but I think it's very different now."

Robin Scheiner, MD, a 33-year-old dermatologist from Drexel Hill and West Grove, agrees, admitting that the perception of organized medicine as an "old boys' club" still exists, although maybe not as much as when she first joined.

"The first year I got out in practice," she says, "I tried to pursue a position on the board of the Delaware County Medical Society, and for the longest time, nobody ever got back to me." At that time it was an all-male board. But, Dr. Scheiner remained "persistant without being obnoxious," and eventually her efforts paid off—she currently serves as one of two female board members of the county society.

"I try to encourage other women physicians to get involved in organized medicine as well, although time committment is always a factor," she adds. "At this point in time, with all the political changes that are going on, *all* physicians should be involved in organized medicine. One of the best ways to influence current legislation is to be in an organized group speaking with one voice."

With that in mind, Dr. Scheiner says she doesn't like to see women in medicine made into an issue. "As I said, I really think it is important for doctors to act as one unit, and I don't like groups that try to section themselves off among physicians either."

Dr. Scheiner considers herself "lucky," having come into medicine, she says, at a time when there are more women physicians, and a lot less discrimination and harassment. "I can think of one episode of sexual harassment in my entire training...Considering all the training I've had, one episode isn't really that bad."

As for women who choose her as a physician because she is a woman, Dr. Scheiner says, "I believe that is human nature, not a form of reverse discrimination." She explains, "Some female patients seek out female physicians for certain problems. The corollary, of course, is some men with certain problems may feel uncomfortable with a woman physician."

"I don't feel badly about that," Dr. Scheiner adds. "I certainly don't want a patient to feel embarrassed or uncomfortable. Patients should see whatever doctor they feel most comfortable with. I mean, there are Italian patients who seek out Italian doctors because they speak the language...."

For Dr. Scheiner, the gender difference comes more in her private life—balancing child care and her personal life with her profession, she says. But, that too seems to be changing, according to Dr. Rose. "I think women are still handling the traditional mothering aspects of family life, although I do see more of my male colleagues concerned with child care and other parenting issues."

The importance of diversity

Dr. Rose attributes many of the changes—especially within organized medicine—not to the greater number of women physicians, but more to "the young people who have been taught the importance of diversity."

In fact, recognizing the importance of a diversified workplace and diversified population is the key to change,

Percentage of U.S. Physicians Who Are Women

1970	7.6
1980	11.6
1990	16.9
1993	19
2010	29.4*

** AMA projection*

The Numbers Are Growing

According to the Association of American Medical Colleges, 17,957 women applied to medical school in 1993, compared with 10,411 in 1987.

according to Roberta L. Schneider, MD, a Doylestown resident and vice president of Novo Nordisk Pharmaceuticals of Princeton, New Jersey.

Dr. Schneider says, "There is this piece of me that would like to say that 'women in medicine' is not an issue, but I still believe that it is." She talks of instances in her training where women "had to be very aggressive" to get an opportunity to perform certain procedures and certain types of examinations. Now, she believes women physicians need to be more aggressive in facilitating change. "I don't think the discrimination is mean spirited," she says. "It's just that a lot of women are not calling attention to episodes of sexism or genderism, so men don't even see if they're doing it [and] they don't have a chance to make progress."

"The culture of industry has changed a lot faster...not because the people wanted it to, but because the government told them it had to change. Government told businesses they had to put people in certain positions and implement certain training programs...So they were forced into doing it. Once the force came, and once people started to recognize the value to having a diversified workplace and diversified population, then it was self-perpetuating. That hasn't happened in medicine yet; it's going to take some time, but it's desperately needed."

A brighter future for all

As for the future, these women agree that a change for the better has begun. Dr. Rose summarizes, "If anything, the future will be brighter for women physicians. In managed care, we're going to see a closer approximation of the 40-hour work week. Once we're there, it doesn't matter whether you're male or female, whether you're a physician or a secretary or a nurse. When you have a more reasonable lifestyle, it's easier to handle whatever it is you've chosen to do, easier to schedule your life. In that regard, it will be easier for all physicians to lead a more 'normal' life."

It might also be easier if women physicians use their experiences to prepare themselves for the possibility of experiences like that, Dr. Rose says. "Any person in any kind of a minority situation needs to be prepared for some kind of bigoted remarks made towards them. And they have to decide in advance how they're going to handle it. Are they going to be strong, or are they going to be angry? Are they going to be vindictive, or just handle the situations with dignity?"

"Time may not heal the wrongs that were done in the past," she concludes, "but perhaps it will prepare women for handling them better and keep them from happening again. The effort needs to come from everyone."

NIH Program Addresses Women's Health Issues

The National Institutes of Health (NIH) in 1991 established the Women's Health Initiative to study many of the important issues surrounding women's health. NIH anticipates 163,000 post-menopausal women between the ages of 50 and 79 will participate nationwide over 15 years of the study.

"Years ago, there was a great deal of concern about doing research on women because of their ability to bear children," says Loretta P. Finnegan, MD, a Pennsylvania native and director of the initiative. "I don't think it was done purposely to exclude women; it was more a safety issue. If women were in these studies and they got pregnant, there was concern that the fetus would be damaged. Then, after they had children, it was thought it would be difficult for the women to enter the study, from a practical standpoint."

The problem is that women are different physically, with different hormones and different reactions. "Fortunately," Dr. Finnegan says, "NIH has initiated the type of studies in women that have been traditionally done only with men."

Approximately 40 centers—16 already established, including one at the University of Pittsburgh, and about 24 more throughout the U.S. to be announced later this month—will study "the benefits and risks of preventive approaches and the means of achieving successful adoption of these behaviors," NIH says.

The clinical trial component enrolling 63,000 women has three interventions, and women can enroll in one or more of the intervention components. The first will evaluate the effect of a low-fat dietary pattern on prevention of breast and colon cancer and coronary heart disease. The second will examine the effect of hormonal replacement therapy on prevention of coronary heart disease and osteoporotic fractures. The third will evaluate the effect of calcium and vitamin D supplementation on prevention of osteoporotic fractures and cancer.

A concurrent long-term observational study of 100,000 women will delineate new risk factors and biological markers for disease in women. NIH expects the initiative to be completed in 2005, with results due in 2007. Its investment is expected to reach almost $628 million.

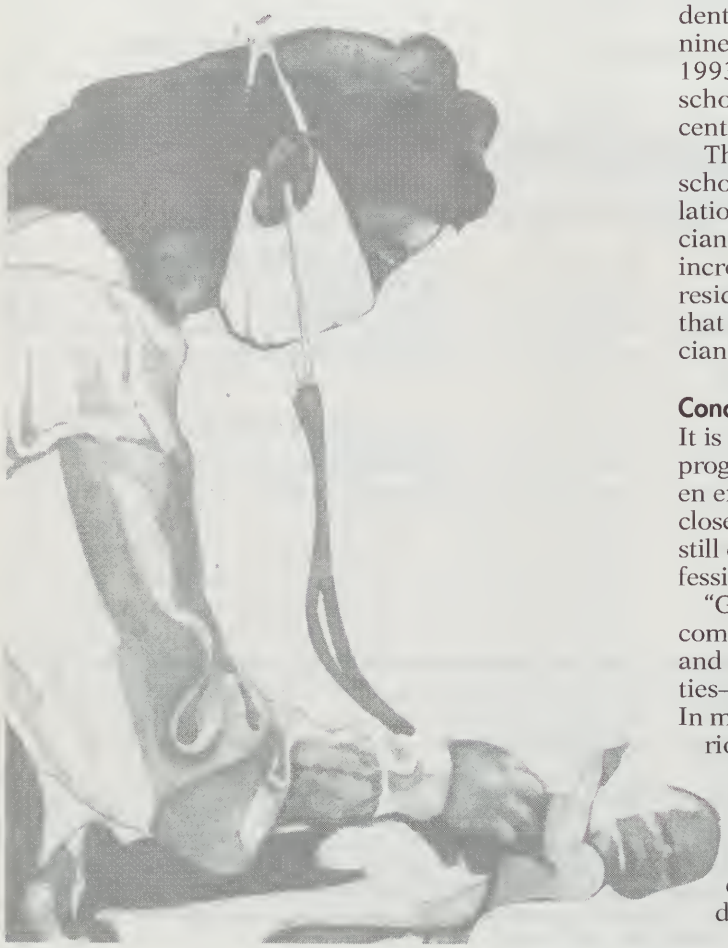
As an organization accredited by the Pennsylvania Medical Society for its continuing medical education program, Geisinger designates these activities as meeting the criteria for Category I credit for the American Medical Association's Physician's Recognition Award and the Pennsylvania Medical Society membership requirement. Please refer to each individual program flyer for registration fees, starting times, and number of credit hours. For further information or for copies of individual programs, call Sharon Hanley, RMP, at 1-800-272-6692. There is a 24-hour answering service available. You may also write to her at 100 North Academy Avenue, Danville, PA 17822-1350.

Women Physicians on the Move

Phyllis Kopriva



The American Medical Association designates each September as Women in Medicine Month—a time to celebrate the achievements of women physicians and to promote the increasing opportunities for women in organized medicine and the profession. This year, the theme of the campaign is, "Women Physicians On the Move," reflecting the dramatic growth of women physicians in both number and influence. Today, 20 percent of all U.S. physicians are female—4.5 times more than in 1970.

There is a good chance now that the physician with whom you are working—in your practice, hospital, and medical society—is a woman. But it's not just their numbers that are impressive. Women physicians have taken on important leadership roles in the profession and in their medical organizations. Women now are represented in all medical specialties and practice settings, and they have made significant contributions in government, medical research, health policy, and public health.

But it has been a long, slow road for women who wanted to become physicians. Despite some initial success at the end of the last century—when the Victorian principles of the day were influencing women to look for women physicians—by the turn of the century, women represented only six percent of the physician population. In 1910, more than half of U.S. medical schools refused to accept women. Even in the 1960s women still faced some quotas in admission criteria.

The largest increase in the number of female medical students occurred in the 1970s, when women increased from nine percent to 28 percent of total applicants. For the 1992-1993 year, the number of women applying to medical schools grew to 42 percent of the total, representing a 63 percent increase since 1979.

This growth in the number of women entering medical school has carried over, of course, into the physician population. Between 1970 and 1980, the number of total physicians more than doubled; between 1980-1990, the number increased nearly 92 percent. The proportion of women in residency programs is now more than 30 percent, a figure that the AMA projects will apply to the total female physician population by the year 2010.

Concerns remain

It is obvious that women physicians have made tremendous progress in the profession, and the future is bright for women entering medicine now and in the future. Nevertheless, a closer look at women in medicine today reveals that barriers still exist that may prevent them from following certain professional paths or from moving totally into the mainstream.

"Glass ceilings," an institutional lack of flexibility in accommodating family responsibilities, sexual discrimination and harassment, inequities in pay and career opportunities—these are issues of concern to all women professionals. In medicine, however, with its long and intense training periods that usually occur during a woman's primary childbearing years, maternity leave and child care issues take on particular significance.

It is also noted that the practice characteristics of women physicians continue to differ from their male colleagues in several key areas that may be related to gender bias. Women are over-represented in the primary

care specialties. For example, women are about three times as likely as men to be pediatricians and less than half as likely to be surgeons. Lack of mentors and role models have discouraged some women from entering the non-primary care fields.

Specialty diversification among women is beginning to occur, however. In 1970, only seven specialties had more than 1,000 women physicians, representing over half of all female physicians. But by 1992, fifteen specialties had more than 1,000 women, almost 68 percent of women physicians.

Women physicians are younger on the average and, therefore, newer in practice. Statistics imply they work fewer hours and see fewer patients; however, it is unclear of the significance of that data. Some have speculated that women spend more time with their patients, thus seeing fewer in number. Women physicians are less likely than male physicians to be self-employed and twice as likely to be employees. These factors are part of the reason that incomes of women physicians average about 63 percent of male physicians' annual net income—although the income growth rate for females is higher than for men. Not all of the pay gap can be explained this way, however. Even when specialty choice and practice characteristics are factored in, the gap remains, indicating that some degree of gender-based discrimination plays a role in the generally lower incomes of women physicians.

Other inequities also exist. Academia has few women at the top. Only two of the nation's 126 medical school deans are women, and few women faculty members are full professors or department heads. Women students and physicians still complain of sexual harassment and sexist behavior. An AMA opinion poll last year brought in responses from 2,500 women in medicine, 75 percent of whom said that they had experienced sexual harassment. AMA surveys also show that, while having children during medical training practice is now commonplace, it is not made easier by murky and often inflexible organizational policies and pressures from colleagues or supervisors.

As the number of women physicians grows, and as women continue to move into the mainstream of medical practice, these gender-based practice differences will continue to diminish. And there is other good news. Women physicians have taken control of their careers and are successfully combining childbearing and childrearing, medical practice, and their professional responsibilities.

Their influence on the profession, organized medicine, and health care delivery will continue to expand. Professional benefits will probably evolve to more innovative work options, a more creative approach to maternity leave and child care issues, and perhaps a turn toward a less stressful professional environment, offering male and female opportunities to achieve a greater personal and professional balance.

Women physicians are also greatly involved in the national debate on health system reform. As medical society leaders, they are participating in the local, state, and national debate. Women appear to place a strong emphasis on public health and access issues which may shape their contributions to the debate to the benefit of their patients. Also, their primary care orientation may work to their advantage under reform.

Gender disparity

At the 1993 AMA Annual Meeting, the House of Delegates adopted a report on "Gender Discrimination in the Medical Profession," which states that "although there has been progress in recent years, women in medicine are not generally advancing to the highest levels of the profession, and are continuing to encounter subtle and overt forms of discrimination during their training and careers." The report addressed a number of gender-disparity issues, including the gap in income levels, lack of advancement in academic medicine, inadequate representation in medical research, insufficient accommodation of pregnancy and family, sexual discrimination and harassment, the lack of mentorship from women, and the ongoing exclusion of women from peer networks.

The report's 10 recommendations suggested ways to address these issues to benefit women in medicine and the profession as a whole, concluding the "profession of medicine needs talented and committed physicians and researchers, and cannot afford to discourage valuable members. Medicine's future will be greatly influenced by the presence of women, and its future success may depend on a fair inclusion and accommodation of both genders in the medical workplace."

The same can be said of organized medicine. Women traditionally have joined organized medicine in proportionately lower numbers then have male physicians. Their stated reasons include financial considerations, the "good old boy" image of the medical society, and lack of time during the years when family responsibilities are of prime importance.

Organized medicine has become more sensitive to these issues, working to better represent the interests and address the needs of its women members. The AMA's policies on sexual harassment, maternity and paternity leave, child care, and gender-neutral language demonstrate a commitment and responsiveness to women in medicine issues. More women are participating, and more are moving into important leadership positions.

The AMA Advisory Panel on Women Physician Issues serves as an advocate for women physicians and medical students. Two women hold elected positions on the AMA Board of Trustees, and many more serve open AMA councils and committees. The percent of women in the AMA House of Delegates has increased from 2.7 percent 10 years ago to over 10 percent in 1994.

The key to synergy among all physicians is to create an environment where gender differences not only strengthen the profession and organized medicine, but also enhance the art and science of medicine.

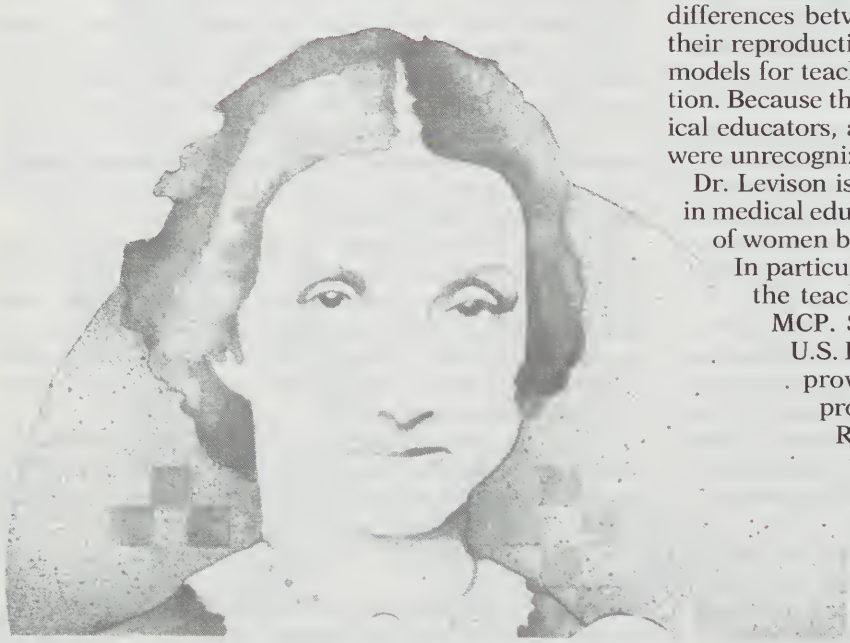
"Their influence on the profession, organized medicine, and health care delivery will continue to expand."

Ms. Kopriva is the American Medical Association's director of women and minority services.

Women's Health and Medical Education: Seeking Balance

The Medical College of Pennsylvania—founded in 1850 as the first medical school for women—is carrying out a pioneering program to improve health care to women by integrating women's health into medical education.

Eryn Dobeck



Leaf through a typical medical textbook, and look at the illustrations. How many depict men, how many depict women? For generations, male anatomy has been the norm, with females seen only in chapters on reproduction.

Last year, Kat Mendelsohn, from the Medical College of Pennsylvania's (MCP's) class of '96, noticed this bias toward using men, in both anatomy text illustrations and as the subjects of medical cases used in their problem-based learning groups. Her concern led her to participate in a research project, under the guidance of two faculty members, Sandra P. Levison, MD, and Linda Z. Nieman, PhD.

The researchers examined over 4,000 illustrations in 12 anatomy and physical diagnosis textbooks currently used at the college and other Philadelphia medical schools. They found that, for the anatomy texts, virtually all the illustrations of women were in sections on female reproductive systems. Most of the illustrations of other body parts were of males.

The textbook bias is a symptom of a broader problem, according to Dr. Levison, a professor of medicine, who says that medicine reflects society, and women have been valued historically for their sexual and reproductive role as mothers. They have only recently been given the right to vote and work outside the home. Our culture has valued white men, and medical education in general has been unwittingly slanted toward male models. Important areas of clinical research and pharmacology, on which treatments are based, have been conducted predominantly on male subjects, and the results do not always apply to women.

"Even laboratory animals are usually male," says Dr. Levison, who adds, "There is a lack of medical knowledge of the differences between men and women that extend beyond their reproductive systems. Women tend to be invisible as models for teaching in much of traditional medical education. Because there have been few female researchers, medical educators, and practitioners, many of these inequities were unrecognized or ignored."

Dr. Levison is the principal investigator of a new project in medical education that seeks to improve the health care of women by bringing more balance to the curriculum. In particular, women's health is being integrated into the teaching of first- and second-year students at MCP. Supported by a three-year grant from the U.S. Department of Education's Fund for the Improvement of Post-Secondary Education, the project is unique in American medical schools. Reviewers of the grant proposal called it "potentially groundbreaking" and rated it highly, expressing confidence that the program could serve as an educational model for other medical schools.

The women's health curriculum is part of a broader commitment to women's health by the college and the hospital. The

Center for Women's Health provides an array of preventive, diagnostic, and therapeutic health services, and the Institute for Women's Health is a multidisciplinary effort that encompasses educational, clinical, and research programs in women's health.

MCP is the first medical school in the U.S. to integrate women's health education into its curriculum. "'When medical schools offer any training in women's health, it's usually elective courses or occasional lectures, or nothing beyond training in obstetrics and gynecology," says Dr. Levison.

The new curriculum aims for understanding of diseases and conditions that are unique to, more prevalent among, or more serious in women. It does so by stressing an interdisciplinary approach to women's health, rather than a fragmented and specialized one. Students learn about medical conditions in which there are gender differences in symptoms, risk factors, and treatments. There also is a strong orientation toward community medicine and maintaining good health.

The first students to encounter the new curriculum are the 46 students in the Program for Integrated Learning (PIL), the college's alternative curriculum track for first- and second-year students. In that program, students work in small groups with a faculty facilitator to analyze patient cases and identify areas where learning is needed.

Faculty members—directed by Drs. Levison and Nieman, as well as Barbara A. Caruso, RN, PhD, of the Office of Medical Education—are authoring and rewriting teaching cases to provide more gender balance in the types of problems presented. Guided by faculty members, students learn what questions to ask female patients so they can recognize problems more common in women, such as physical or sexual abuse and eating disorders. Students learn how medical problems in a woman may have different symptoms from a man with the same condition. For instance, a woman with a heart condition may complain of dizziness or gastrointestinal distress, while a man more typically has chest pain.

"Because PIL is an integrated, collaborative program," says Charles D. Puglia, PhD, PIL director, "it means that when an area like women's health is identified, we have enough faculty, with diverse expertise, to enable us to incorporate new information into cases and provide appropriate levels of learning resource support. The PIL curriculum track is designed to be flexible, so we can revise material as new learning needs arise."

"There is a lack of medical knowledge of the differences between men and women that extend beyond their reproductive systems. Women tend to be invisible as models for teaching in much of traditional medical education."

–Sandra P. Levison, MD

The women's health curriculum sometimes asks students to analyze unexamined assumptions in their education. One tool the program has developed is a guide to gender-free bias in communication. In addition, says Dr. Levison, "We'll teach students to be sensitive to communication skills they'll need as physicians, such as in taking medical histories from a patient of the opposite sex. Improved communication between physicians and patients helps empower patients to participate in their own diagnosis, treatment, and health maintenance."

Lucia Weiss, women's health program manager, adds, "We are not teaching women's health at the expense of men. The recognition of gender differences in communication, diagnosis, and treatment will improve health care for all patients. In addition, issues of diversity account for different needs in women from various ethnic, racial, and economic backgrounds."

All PIL students participate in a primary care practicum, in which they spend nine weeks with faculty preceptors, seeing selected patients in a community setting. Some of the students may choose to do their practice in women's health projects.

Faculty development is an important aspect of the curriculum, according to Dr. Nieman, assistant dean for medical education and a co-investigator of the curriculum grant: "We're holding workshops for faculty members and developing resources on women's health, for both students and faculty. In the process, we're finding gaps in our own knowledge and learning how we can fill those gaps." Many of the same faculty members teach both PIL groups and traditional lectures, so the expectation is that PIL teachers will transfer some of the information presented during PIL groups into their lectures for students in the traditional curriculum.

"We expect this program will be a catalyst for eventually introducing formal women's health education into third- and fourth-year clinical training and residency training," says Dr. Levison. "We have already started introducing women's health teaching into the internal medicine residency, and we also are developing a catalog of women's health cases that can be used in other medical schools. Ultimately, we want our program to be a model that will help diffuse responsibility for care for women to all physicians, not just a few specialists."

Ms. Dobeck is a public relations representative, Medical College of Pennsylvania, Philadelphia.

Are YOU Ready for the Coming Revolution?

David Woods

Editor's Note: Realizing that an estimated half of all malpractice suits, and most of the questions on "report cards" on physicians, have to do with communications issues, we are launching this month a column on these issues by author David Woods, an occasional contributor to this publication. Future articles will deal with such topics as the art of listening, reading to keep up-to-date, and avoiding "medispeak."

While the term "information explosion" has already been relegated to the ranks of cliché, the issue it describes is still very much with us—there are twice as many biomedical journals as there were 15 years ago, and the clamor of other messages aimed at physicians has reached a crescendo.

With this in mind, I asked Philadelphia internist Roger Daniels, MD, to collect 10-days' worth of the printed matter that he receives in the mail. It filled a box roughly the size of a suitcase designed for far-flung travel. The trove included journals, product literature, marketing pitches, invitations, exhortations. Irresistible offers of this and that.

To be specific, there were 18 pharmaceutical product pitches, 15 journals, 12 continuing education course announcements, and a miscellany of financial, travel, software, and institutional information. It was overwhelming, and most of it was destined for transfer to another container—the trash can.

Dr. Daniels believes that three-quarters of this material is a complete waste of time. He views the pharmaceutical pitches, he says, with much the same skepticism as he would those of a used car salesman. "They have little impact" he says, noting that he gets his drug information mainly from colleagues or from *The Medical Letter*.

As for journals he actually reads? Well, the *New England Journal of Medicine* and the *Annals of Internal Medicine* rate pretty high; but, says Dr. Daniels, "I look more and more for abbreviated material...and I spend an equal amount of time these days reading about the business aspects of practice—health care reform, managed care, HMOs, etc.—whereas 20 years ago, I wouldn't have spent a minute on that topic."

Now, admittedly, this is a sample of one. Dr. Daniels' experience and attitudes may not be typical. I feel certain, therefore, that the editors of this journal would be intrigued to hear readers' accounts of *their* receivables, so far as reading matter is concerned. In any event, physicians may soon find that the cascade of communications is about to dwindle, if not to a trickle, then at least to a manageable stream.

"Physicians may soon find that the cascade of communications is about to dwindle, if not to a trickle, then at least to a manageable stream."

Consider: Pharmaceutical companies, concerned about health system reforms that emphasize cost effectiveness and "the bottom line," are slashing their promotional and advertising budgets. In 1992, they bought 62,000 medical journal advertising pages; the projected figure for 1994 is 37,000 pages. Since most publications operate on a fixed editorial/advertising ratio, it's estimated that there will be 33,000 fewer medical journal editorial pages in 1994 than there were in 1992. It also means a longer lead time for publishing new knowledge; the information will be older when it reaches you.

And the pharmaceutical sales rep—the detail person—soon won't reach you at all, except perhaps on videotape. Among 32 major companies, there's been a seven percent decline in the number of reps in the past two years—with Bristol-Myers

Squibb showing a 30 percent drop, Upjohn 20 percent, and Syntex 18 percent. Moreover, the drug companies will be increasingly more likely to take their prescription message direct to the consumer or the pharmacist than to the physician. Think about the ads for Proscar and Prozac.

Finally, those same companies are going to divert more resources into promoting themselves—a long overdue exercise since, as the *Economist* put it in a recent article on what it called the drug industry's first serious attempt to get into the health care business, that industry is "not well thought of by consumers."

And those same consumers—your patients—will be getting more information, some of it from the pharmaceutical companies, some from a growing array of health care education sources in a variety of media. According to *Harper's Index* (June 1994) the ratio of Americans citing the source of their medical information is two to one in favor of television over physicians. So be prepared to answer increasingly sophisticated questions.

And, above all, be a communicator, because another aspect of the revolution in medical communication is the "report card" that patients will fill out on their doctors. If you've seen one of these, you'll have noted that most of the questions have to do with how the doctor is perceived as a communicator rather than as a clinician.

In sum, then: Fewer pharmaceutical ad pages, therefore fewer medical journals, therefore a longer lead time in getting information to you; fewer detail folk; more 'abbreviated' reading matter, especially on management issues; a more knowledgeable and questioning health care consumer; and a greater variety of media.

As Mary K. Cowell, president of the American Medical Publishers Association, puts it: "Our association used to be all print companies; now, more and more member organizations are in purely electronic media, such as CD-ROM." She says the present cutbacks in advertising may merely be a pause while pharmaceutical companies—and other medical entities—retrench and seek out different ways of getting their message across. Perhaps physicians should be keenly aware as new styles of communications emerge around them. ⬡

YOCON®
YOHIMBINE HCl

Description: Yohimbine is a 3a-15a-20B-17a-hydroxy Yohimbine-16a-carboxylic acid methyl ester. The alkaloid is found in Rubaceae and related trees. Also in Rauwolfia Serpentina (L) Benth. Yohimbine is an indolalkylamine alkaloid with chemical similarity to reserpine. It is a crystalline powder, odorless. Each compressed tablet contains (1/12 gr.) 5.4 mg of Yohimbine Hydrochloride.

Action: Yohimbine blocks presynaptic alpha-2 adrenergic receptors. Its action on peripheral blood vessels resembles that of reserpine, though it is weaker and of short duration. Yohimbine's peripheral autonomic nervous system effect is to increase parasympathetic (cholinergic) and decrease sympathetic (adrenergic) activity. It is to be noted that in male sexual performance, erection is linked to cholinergic activity and to alpha-2 adrenergic blockade which may theoretically result in increased penile inflow, decreased penile outflow or both.

Yohimbine exerts a stimulating action on the mood and may increase anxiety. Such actions have not been adequately studied or related to dosage although they appear to require high doses of the drug. Yohimbine has a mild anti-diuretic action, probably via stimulation of hypothalmic centers and release of posterior pituitary hormone.

Reportedly, Yohimbine exerts no significant influence on cardiac stimulation and other effects mediated by B-adrenergic receptors, its effect on blood pressure, if any, would be to lower it; however no adequate studies are at hand to quantitate this effect in terms of Yohimbine dosage.

Indications: Yocon® is indicated as a sympathicolytic and mydriatric. It may have activity as an aphrodisiac.

Contraindications: Renal diseases, and patient's sensitive to the drug. In view of the limited and inadequate information at hand, no precise tabulation can be offered of additional contraindications.

Warning: Generally, this drug is not proposed for use in females and certainly must not be used during pregnancy. Neither is this drug proposed for use in pediatric, geriatric or cardio-renal patients with gastric or duodenal ulcer history. Nor should it be used in conjunction with mood-modifying drugs such as antidepressants, or in psychiatric patients in general.

Adverse Reactions: Yohimbine readily penetrates the (CNS) and produces a complex pattern of responses in lower doses than required to produce peripheral a-adrenergic blockade. These include, anti-diuresis, a general picture of central excitation including elevation of blood pressure and heart rate, increased motor activity, irritability and tremor. Sweating, nausea and vomiting are common after parenteral administration of the drug.[1,2] Also dizziness, headache, skin flushing reported when used orally.[1,3]

Dosage and Administration: Experimental dosage reported in treatment of erectile impotence.[1,3,4] 1 tablet (5.4 mg) 3 times a day, to adult males taken orally. Occasional side effects reported with this dosage are nausea, dizziness or nervousness. In the event of side effects dosage to be reduced to ½ tablet 3 times a day, followed by gradual increases to 1 tablet 3 times a day. Reported therapy not more than 10 weeks.[3]

How Supplied: Oral tablets of Yocon® 1/12 gr. 5.4 mg in bottles of 100's NDC 53159-001-01 and 1000's NDC 53159-001-10.

State Society Scores Wins for Members

By summer's end, the State Society had tallied substantial savings for Pennsylvania physicians as the result of several hard-fought judicial and regulatory battles.

Medicaid rules

The string of victories began in early July, when the Society convinced the state Department of Public Welfare (DPW) to delay implementation of the new Medicaid preauthorization program by two weeks to allow physicians time to receive and review instructions from DPW. The information—which explained new rules for how physicians are to obtain preauthorization for brand-name drugs that have a USDA "A"-rated generic substitute, and how to request exceptions—arrived in physicians' mailboxes about the same time the program was scheduled to start. The Society voiced a number of concerns about the program to DPW.

Overpayment error

A second victory came on July 19, when a Medicare fair hearing examiner in Maryland agreed with the AMA and the State Society that physicians should not be responsible for Pennsylvania Blue Shield's error in over-reimbursing for certain Medicare clinical lab procedures. The ruling and prior efforts of the AMA and Society will save Pennsylvania physicians more than $4 million.

Through intense earlier discussions by the AMA, the State Society, and other groups, the Health Care Financing (HCFA) had already agreed to forego $3 million in overpayments. The ruling—which resulted in additional savings of $1.3 million—agreed with our contention that federal law requires that if an error is made by the carrier and the physicians are not "at fault," the physicians need not repay overpayments.

The AMA had offered to represent all of the 730 affected physicians who were members of the AMA or their state medical society. Physicians from New Jersey, Delaware, Virginia, the District of Columbia, and Maryland were also represented in the appeal.

"Physicians are overwhelmed with third-party payers' myriad requirements. When physicians comply with those requirements and, after the fact, third-party payers determine the payment was in error, it undermines the credibility of the entire reimbursement process," commented James S. Todd, MD, AMA executive vice president. Blue Shield cannot repeal this ruling and was to send refunds within 30 days to physicians who joined the State Society's appeal.

Dual eligibility

Perhaps the biggest financial victory—estimated at between $25-45 million or more per year in higher payments to physicians—came with the Society's win in the federal Third Circuit Court of Appeals in late July.

The Society won its appeal in the case of *Pennsylvania Medical Society v. Snider.* The ruling compels DPW and HCFA to pay coinsurance and deductibles for low-income elderly who are eligible for both Medicare and Medicaid. The Society argued on behalf of physicians in the commonwealth that federal statues require the Medicaid program to pay these amounts, which otherwise are paid by enrollees. HCFA and DPW declined to do so, except in limited numbers of cases where the Medicaid payment would exceed the Medicare reimbursement.

The ruling overturned a November opinion by President Judge Sylvia Rambo of the Federal District Court for the Middle District of Pennsylvania who denied our motion for summary judgment. The Appeals Court ruled that the Pennsylvania limitations on payment violated both the Medicare Act and the Medicaid Act, and reversed the judgment of the District Court.

The three-judge Appeals Court panel said in its opinion "...because [low-income elderly] are poor and cannot financially shoulder the burden of paying the Medicare Part B cost-sharing...Congress required the states to stand in [their] shoes... Accordingly, Medicare Part B service providers who supply service to [low-income elderly] are entitled to recover 100 percent of the [Medicare-allowable] costs and charges."

This decision is similar to a federal appeals court ruling in a New York case, and several more cases are pending in other appeals courts. The federal government has at least 90 days, and possibly up to 150 days, in which to file a Petition for Certiorari to the U.S. Supreme Court.

CAT Fund controversy

Also in late July, in *Boettcher v. King*, the state Supreme Court ruled the Catastrophe Loss Fund (CAT Fund) is not immune from paying post-judgment interest. The case involved a plaintiff's attempt to wrest an interest payment from a physician, the Pennsylvania Medical Society Liability Insurance Company (PMSLIC), and the CAT Fund for a portion of a judgment that was not paid immediately. PMSLIC had already paid its portion of the verdict, but the CAT Fund withheld payment of its share of the judgment, claiming state law requires it to delay payments until the December 31 following the August 31 by which the judgment became final.

The fund also claimed to be statutorily exempt from paying post-judgment interest. The plaintiff appealed to Commonwealth Court, which held that the CAT Fund is not immune from paying interest on its share and that it, not the physician or insurer, is liable for the payment.

Both the plaintiff and the CAT Fund appealed to the state Supreme Court. The Society argued in an amicus brief that physicians should *not* be responsible for the interest. The court agreed that state law does not exempt the CAT Fund from paying post-judgment interest, also noting that the law calls for judgments to be paid on or before December 31.

SURGICAL PATHOLOGY CODES CHANGED

Pennsylvania Blue Shield has reduced the total charge and professional component allowances for surgical pathology procedures by 20 percent for private business plans. Blue Shield has indicated the change, which became effective on May 30,

1994, was necessitated by a modification in reporting requirements for codes 88300, 88302, 88304, 88305, 88307, and 88309.

Based on a recent decision by Blue Shield's board of directors, one surgical pathology code can now be reported for each separately identifiable specimen that requires individual examination and pathologic diagnosis. Blue Shield recommends the following guidelines for reporting surgical pathology studies:

- A specimen is defined as tissue or tissues that is (are) submitted for separate attention, requiring individual examination and pathologic diagnosis.
- Report code 88300 for any specimen that can be accurately diagnosed without microscopic examination.
- Report code 88302 when gross and microscopic examination is performed on a specimen to confirm identification and the absence of disease.
- Codes 88304-88309 represent additional ascending levels of physician work and are specifically defined by the assigned specimen. Report codes 88304-88309 for all other specimens requiring gross and microscopic examination.
- Assign any unlisted specimen to the code which most closely reflects the physician work involved when compared to other specimens assigned to that code.

As a result of this change, Private Business Blue Shield and Medicare are consistent in reporting guidelines.

Direct any questions about billing for surgical pathology services to the Society's Department of Medical Economics at (800) 228-7823 or (717) 558-7750.

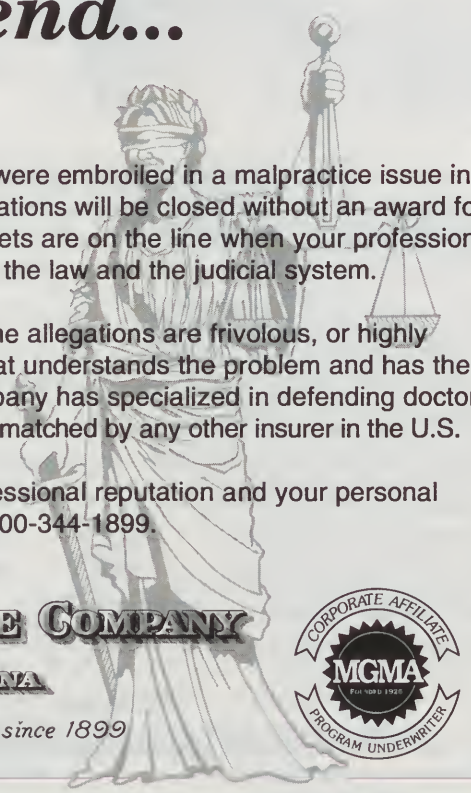
...a promise to defend...



HERE ARE THE FACTS: Over 25% of America's Physicians were embroiled in a malpractice issue in the last 12 months. More than 80% of those malpractice allegations will be closed without an award for damages. Your professional reputation and your personal assets are on the line when your professional liability carrier is not both financially sound *and* experienced in the law and the judicial system.

WHEN THE ISSUES ARE LEGAL, NOT MEDICAL — when the allegations are frivolous, or highly emotional — you need a company and legal representation that understands the problem and has the experience to resolve the issue. The Medical Protective Company has specialized in defending doctors since 1899. Our legal and claims management experience is unmatched by any other insurer in the U.S.

FOR MORE INFORMATION on how we can protect your professional reputation and your personal assets, call your local Medical Protective General Agent at 1-800-344-1899.

AMA VOTES TO SUPPORT BI-PARTISAN BILL

As the health system reform debate turned vicious in Congress toward the end of summer, the AMA stepped forward in support of the House Bipartisan Plan, dubbed the Rowland-Bilirakis bill. Early newspaper reports expected the plan to shun both tax increases and employer mandates.

Only days after the U.S. Senate opened debate on reform, the AMA board called a special meeting in Chicago to analyze the bipartisan legislation. The board had already taken a position of "non-support" for the House Democratic Leadership bill. On August 10, the AMA announced its endorsement of the "bipartisan bill," pending final review of legislative language. The AMA also expressed willingness to explore all options in the U.S. Senate to find a suitable comprehensive bill meeting the AMA's health reform goals.

According to the AMA, the bipartisan bill offers all Americans and their families the most realistic hope in the House of Representatives for significant health system reform of all the bills currently under consideration. The AMA believes that the bill:

- provides health care security—allowing portability and eliminating pre-existing conditions and exclusions—almost immediately through significant insurance reforms;
- offers a substantial first step toward the goal of coverage for all Americans;
- protects and preserves the patient-physician relationship;
- avoids and protects against unnecessary and burdensome bureaucracy;
- ensures patients' choice of physicians and offers options for health insurance to patients;
- protects patients and physicians from arbitrary decision-making that puts profits before quality patient care;
- would preserve the world's finest medical education system; and
- provides significant professional liability reforms.

The board also expressed concern that the bill does not contain adequate tobacco taxes and would institute Medicare cuts that might reduce access to physician services for seniors and the disabled.

Details of the plan were sketchy at press time. Reported as "lightening rods" for any potential bipartisan compromise were Representatives J. Roy Rowland, MD (D-GA), a former family doctor; Jim Cooper (D-TN); Fred Grandy (R-IA); and Michael Bilirakis (R-FL).

Representative Rowland and nine representatives unveiled the plan on August 12, saying the plan would cover 90 percent of Americans by the year 2004. The White House denounced the bill, saying it would not control costs or help middle-class or older Americans or small business. The bill was supported by a coalition of five big insurers: Aetna, Cigna, Metropolitan Life, Prudential, and the Travelers Corporation.

As the bipartisan plan was being unveiled, debate on reform was postponed while the House Democratic leaders concentrated on passing President Clinton's hotly debated Crime Bill.

EVERYPLACE YOU WANT TO BE
IS EITHER DOWNSTAIRS OR DOWN THE BLOCK.

Conveniently located, the beautifully appointed Sheraton University City features reasonable rates, outstanding meeting facilities and Smart Alex, our lively restaurant that's a local favorite. Just down the block are the University of Pennsylvania and Drexel University, as well as the Hospital of the University of Pennsylvania, the Children's Hospital of Philadelphia and Presbyterian Hospital. But every bit as important as our great location is our great service. You'll find our staff to be friendly, competent and quick to take care of your needs. Please call 215-387-8000 or call toll free 800-325-3535 for ITT Sheraton Worldwide Reservations.

REGISTRATION INFORMATION

- *Call for Reservation materials (717) 290-4500*
- *No Program Fee*
- *5 Category I CME Credits*

Accreditation Statement

Temple University School of Medicine is accredited by the Accreditation Council for Continuing Medical Education (ACCME) to sponsor Continuing Medical Education for physicians.

Certification Statement

* Temple University School of Medicine designates this CME activity for one credit hour specified in Category I of the Physicians Recognition Award of the AMA.

Credit will be awarded to those physicians who sign and return the program evaluation form

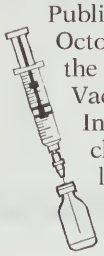
Disclosure Policy Statement

It is the policy of Temple University School of Medicine, Office for Continuing Medical Education to insure balance, independence, objectivity and scientific rigor in all its sponsored or jointly sponsored educational programs. All faculty participating in sponsored or jointly sponsored programs by Temple University School of Medicine are expected to disclose to the program audiences any real or apparent conflict(s) of interest related to the content of their presentation(s).

LANCASTER GENERAL

Jointly sponsored by:

PHYSICIANS SOUGHT FOR STATE VACCINE PROGRAM



The Pennsylvania Departments of Public Welfare and Health on October 1 will begin operating the new, federally funded, Vaccines for Children program. Intended to help raise childhood immunization levels in the U.S., the program supplies—at no cost to participating providers—federally purchased vaccines for children in certain groups. Approximately 60 percent of U.S. children are expected to benefit from the program.

During 1993, the national Childhood Immunization Initiative of the U.S. Department of Health and Human Services set national goals for immunization coverage levels. Foremost is to adequately immunize at least 90 percent of the nation's two-year-olds by 1996. In support of the initiative, the Vaccines for Children program was developed.

Vaccines and combination vaccines to be offered initially will protect against nine diseases, including diphtheria, *Haemophilus influenzae* type b, hepatitis B, measles, mumps, pertussis, poliomyelitis, rubella, and tetanus. As new vaccines or additional vaccine combinations are approved by the Food and Drug Administration, and recommended by the Advisory Committee on Immunization Practices (ACIP), they will be added to the program.

The commonwealth is seeking physicians to participate in the program. To enroll, you must file a provider profile and an enrollment form with the state Department of Health stating that you agree to:

1) screen the parent or guardian to determine the child's eligibility;

2) maintain a record of the screening with the eligible child's record;

3) comply with the recommended immunization schedule as established by ACIP and state law;

4) not charge for the program-supplied vaccine (an administration fee may be charged as long as service is not denied because the fee cannot be paid); and

5) provide vaccine information materials as prescribed by law for all providers.

For more information, or to receive profile and enrollment forms, contact the immunization program office, Pennsylvania Department of Health, (717) 787-5681.

MALNUTRITION WIDESPREAD AMONG RURAL ELDERLY

Research conducted by commonwealth physicians and nutritionists has found widespread malnutrition among elderly people in rural central and northeastern Pennsylvania. The findings are the product of the four-year-old Geriatric Nutrition Research Alliance, in which physicians at Geisinger Medical Center, Danville, and academic researchers at Penn State are working together to study nutritional problems among the elderly.

Using Geisinger's resources, researchers have examined nutrition knowledge among 180 women over 65 years of age in small Pennsylvania towns. Many have limited nutrition knowledge and suffer from medical conditions, like heart disease, that have well-defined nutritional causes. Geisinger's studies also show that malnutrition is common among older people who are ill and come to the hospitals.

For more information, call Gordon Jensen, MD, PhD, at Geisinger Medical Center, (717) 271-6439.

Excerpted with permission from "Pennsylvania Rural Health News" of the Pennsylvania Office of Rural Health, Colleges of Agricultural Sciences & Health & Human Development, The Pennsylvania State University, Spring 1994.

COUNCIL UNVEILS NATIONAL ORGAN DONOR CAMPAIGN

The nationally recognized Advertising Council, the creator of "Friends Don't Let Friends Drive Drunk" and other important public awareness campaigns, has taken on the organ donor shortage through a new national campaign, "Share Your Life. Share Your Decision."

The purpose of the campaign, unveiled at Penn State's Milton S. Hershey Medical Center in July, is "to drive home the message that good intentions don't save lives; actions do," says Howard Nathan, executive director of the Delaware Valley Transplant Program.

The new campaign was produced on behalf of the Coalition on Donation, a nonprofit alliance of more than 40 hospitals, organ and tissue donor programs, eye banks, patient groups, and affiliated health organizations serving the eastern half of Pennsylvania, south New Jersey, and Delaware.

For more information, call the Coalition on Donation at (804) 330-8620 or the Advertising Council at (212) 922-1500, extension 222.

PRACTICE PARAMETERS NEWS

U.S. AGENCY RELEASES HEART FAILURE GUIDELINES

Millions of Americans now suffering from heart failure could lead longer, more active lives under new guidelines released in late June by the U.S. Public Health Service's Agency for Health Care Policy and Research.

The guidelines, which are based on the results of the latest clinical trials and outcomes research, call for wider use of medications proven capable of preventing heart failure in some high-risk patients, and improving comfort and longevity in patients with established heart failure.

Targetting left-ventricular systolic dysfunction, the most common type of heart failure, the guidelines recommend use of sophisticated imaging technologies for making initial diagnoses, while generally relying on observation of patients' symptoms and physical signs to monitor treatment progress. They also urge better patient education and compliance, and call for the use of bypass surgery or angioplasty in selected instances.

Free copies of "Heart Failure: Management of Patients with Left-Ventricular Systolic Dysfunction," the guidelines' quick reference guide for clinicians, and the patient guide, "Living with Heart Disease: Is It Heart Failure?" (available in English and Spanish), may be obtained by calling (800) 358-9295 or writing: AHCPR Publications Clearinghouse, P.O. Box 8547, Silver Spring, MD 20907.

Single free copies of the clinical practice guideline, "Heart Failure: Evaluation and Care of Patients with Left-Ventricular Systolic Dysfunction," also are available from the clearinghouse on a limited basis.

TOPICS TO BE COVERED

PERIPHERAL VASCULAR DISEASE
- Pathophysiology of Atherosclerosis: Medical Treatment of Peripheral Vascular Disease
- Non-Surgical Intervention in Peripheral Vascular Disease: Role of Thrombolysis, Angioplasty, and Stents

SELECTED ISSUES IN VASCULAR MEDICINE
- Carotid Artery Disease: When to Consider Endarterectomy
- Assessing Cardiac Risk in Patients Undergoing Vascular Surger

VENOUS THROMBOEMBOLIC DISEASES
- Deep Vein Thrombosis Prophylaxis in the Surgical Patient
- Diagnosis and Treatment of Deep Vein Thrombosis and Pulmonary Embolism
- Low Molecular Weight Heparins—Where We Are in 1994

REGISTER TODAY!

The registration fee includes all course materials, continuing medical education credits, continental breakfast, breaks and luncheon.

Registration Fee:

Physicians:	$90.00
Physicians In Training:	$25.00
Allied Health Professionals:	$50.00

Proof of residency status is necessary at time of registration.

For More Information - Contact David A. Cohen, M.D., F.A.C.P. at (215) 427-7557 for more information about the conference.

This conference is supported through educational grants provided by Abbott Laboratories, Boston Scientific, Bristol - Myers Squibb Company, Glaxo, Inc., Johnson & Johnson, Kendall Healthcare Products Company, Pharmacia, Schwarz Pharma, U.S. Healthcare and Wyeth Ayerst Laboratories.

EPISCOPAL HOSPITAL

AMA DELEGATION NEWS

Reform Takes Center Stage at AMA Annual Meeting

Health system reform again took center stage at the AMA House of Delegates' Annual Meeting, held June 18-22, in Chicago.

The AMA House reaffirmed several key elements of its health system reform policy during the meeting, such as achieving universal coverage through a combination of strategies and opposing a Canadian-style single-payer system. As reported in the June 27 *AMNews*, "While [the House] took steps to rein in managed care, they turned down calls to open panels to any physician who meets a plan's stated criteria."

The Pennsylvania Delegation to the AMA offered 10 resolutions at the meeting: Six were adopted; three were addressed in reports adopted in lieu of the resolutions; and one was referred to the AMA board.

The adoption of an AMA board report on violence and the media gained national media attention. The report directs the association to "urge the entertainment industry to fundamentally change its ratings system to give consumers more information about violent and sexual content."

Lee H. McCormick, MD, Allegheny County, was re-elected chair of the AMA Hospital Medical Staff Section Governing Council at the organization's annual meeting in June. Above, he and wife, Barbara, enjoy campaign activities.

A related Pennsylvania resolution proposed that the AMA "review the ways it has provided guidance to the entertainment industry, either as an organization or through its membership...and determine ways it could influence the entertainment industry regarding its depiction of violence."

The call for changes in the rating system received mixed reviews from the media—some applauded the AMA's stance, but others said the issue is not health related and not the business of the AMA. But the federation of medicine says it will remain committed to its action as part of its fight against family and societal violence, and AMA President Robert E. McAfee, MD, said he was pleased that the delegates gave their strong support to the action.

Adoption of health system reform and violence resolutions is consistent with issues of importance to Pennsylvania physicians, according to the State Society's annual Membership/Leadership Poll. The results, released in April, indicate increased concern about violence, rating it third in importance after health system reform and liability tort reform. Last year, Society members rated violence seventh in a list of 10 concerns.

Other Pennsylvania resolutions direct the AMA to:

- review, analyze, and develop a policy about the most desirable types, and the most desirable amounts, of patient cost-sharing measures, including large deductibles (e.g., medical savings accounts);
- study ways to discourage the present control of employee health insurance choices by employers, and report back to the House at the 1994 Interim Meeting;
- develop a position paper on the role of tax deductions, exemptions, and credits in health-related activities;
- review the California state anti-tobacco advertising campaign to discern whether to recommend the nationwide use thereof;
- work with state medical societies and appropriate professional specialty organizations to encourage physician participation in the Project USA physician referral network;
- study refining the Current Procedural Terminology (CPT) coding process to improve descriptive terms and codes so that they might be useful as a precise scientific database or an accurate database for physician payment; and
- request the Health Care Financing Administration to unbundle the payment for ventilator management codes from daily evaluation and management consultation codes.

Doris G. Bartuska, MD, Philadelphia County, was one of the 48-member Pennsylvania Delegation to the AMA to travel to Chicago in June for the AMA's annual meeting. She is pictured with husband, Anthony, first district counselor of the Pennsylvania Medical Society Alliance.

The Pennsylvania delegation also asked the AMA to mandate the board to prioritize all AMA activities and fund only the activities which can be afforded within projected 1995 revenue without a dues increase. An AMA board report addressing the same issues was adopted in lieu of the state's resolution.

Finally, referred for further study was a resolution asking the AMA to study and project the physician workforce to treat the age distribution anticipated in the decades 2010 to 2040.

Election results

In elections, Lee H. McCormick, MD, Pittsburgh, was re-elected chair of the AMA Hospital Medical Staff Section Governing Council, and William H. Mahood, MD, Flourtown, was re-elected to the AMA Council on Medical Service.

Jonathan E. Rhoads Jr., MD, York, was unsuccessful in his effort to obtain a seat on the AMA board.

Also at the meeting, Donald G. Ferguson, MD, the State Society's immediate past president, was elected to the board of the Organization of State Medical Association Presidents.

COUNTY NEWS

MONTGOMERY COUNTY INSTALLS 147TH PRESIDENT

Charles Cutler, MD, Merion Station, was inaugurated as the 147th president of the Montgomery County Medical Society at its annual dinner-dance, held in Norristown in June.

A graduate of Temple University Medical School, Dr. Cutler obtained his residency training from Temple University Hospital. He practices internal medicine from his office in Norristown, is on the staff of Montgomery Hospital, and is an instructor in medicine at Thomas Jefferson Hospital.

Dr. Cutler joined the Montgomery County Medical Society in 1979, chairs its Grievance Committee, serves on the Insurance Committee, and is a delegate to the State Society.

LANCASTER SOCIETY CELEBRATING 150TH YEAR

The Lancaster City and County Medical Society this year is celebrating its 150th year with a variety of promotional materials and special events:

- A celebration banner is displayed at all Lancaster Society meetings and events.
- "The History of the Lancaster City and County Medical Society" will be published in the *Bulletin of the Lancaster County Medical Society* and in *Lancaster Medicine.*
- Medical exhibits have been displayed in Lancaster city and county hospitals.
- Articles from famous people, events, and places in the medical history of the county are published in a society column in the *Lancaster New Era* twice each month.
- Physicians' offices, hospitals, and businesses are displaying a celebration poster, prepared by Paul H. Ripple, MD, a city ophthalmologist.
- A summer picnic was held in June at the birthplace of D. Hayes Agnes, MD, famous surgeon and professor of surgery at the University of Pennsylvania (1871-1891).
- "A Prolonged Labor," a skit about the beginning of the city and county society, written and produced by Herbert L. Tindall, MD, a Christiana family practitioner, will be presented at a premier and private showing to members and spouses of the city and county society at its regular meeting this month.

For further information about these and other special offerings, call the city and county medical society at (717) 393-9588.

DOCTORS, LAWYERS UNITE AT MANAGED CARE SEMINAR

Sixty-five Montgomery County physicians and lawyers attended the annual medical-legal seminar, held at Montgomery County Medical Society headquarters in Norristown in May; this year's topic was managed care. Across the street, the staff was closing Sacred Heart Hospital.

Kenneth Hanover, president and CEO of Bryn Mawr Hospital, and vice president of Main Line Health, Inc., warned, "Sacred Heart's closing is just the tip of the iceberg...Figures that seemed credible less than a year ago that prophesied four beds per thousand of population would be needed have now scaled back to less that one bed per thousand being required, and that 75 percent of hospital beds will be unused."

Hanover reported that U.S. Healthcare and Blue Cross's Keystone Health Plan, both health maintenance organizations, control 28 percent of the insurance market. He sees a consolidation into four or five large hospitals and warns that physicians, as they now practice, will not be able to survive.

Joseph R. Carver, MD, a board-certified cardiologist and medical director for U.S. Healthcare, said, "Physicians must be accountable and must have verifiable data on the quality of care they provide." He also said, "There are 500 cardiologists in the Delaware Valley. That is enough to take care of everyone east of the Mississippi." He contends that not all of them will survive; thus, physicians must start getting on panels, lists of sanctioned providers supplied by major insurers.

Rolan Morris, Esq., warned physicians who are forming large groups to control prices in a region: "In building these groups, there will be serious antitrust questions." He said the law typically lags behind practice, and many of the concerns of physicians entering this new business climate have not been addressed.

Dr. Carver added that U.S. Healthcare is looking for physicians whose treatment is appropriate and in line with reasonable and good medicine, and willing to change to work with them. He concluded that change is inevitable, and his organization is looking for ways to work with people and "not take food out of their mouths."

During the reception that followed, a physician in attendance, when asked if he learned anything new, replied, "Yes. I learned what I thought was bleak is now bleaker."

U. Berkley Ellis, EdD, executive director of the Montgomery County Medical Society, contributed to this article.

MAGAZINE TO PUBLISH PITTSBURGH EDITION

A New York City-based health care magazine is expected to release its first Pittsburgh edition this month with funding from the Pittsburgh Business Group on Health, a nonprofit organization representing 28 of the city's largest employers.

Health Pages, which debuted in St. Louis in November 1993, publishes cost comparisons and other data on local physicians, hospitals, and managed care insurers. Past features have included guides to otolaryngologists, urologists, and breast cancer surgeons. Each compared prices, physician education, hospital affiliations, and office hours. Also, there have been primers on managed care terms and articles on preventive medicine.

The Allegheny County Medical Society (ACMS), in the *Pittsburgh Business Times,* offered support for *Health Pages.* "We certainly support anything that provides objective information to the public on health →

care," said John Krah, ACMS executive director.

The publisher estimates that between 30,000 and 80,000 copies will be printed for the publication's Pittsburgh debut. Pittsburgh is the publication's second market; future editions are also planned for Atlanta and Boston.

BERKS CMS SPONSORS LEGISLATIVE BREAKFAST

The Berks County Medical Society in May sponsored its third annual legislative breakfast. Nine state legislators and 86 Berks County physicians attended the event, held at Chef Alan's West Reading Hotel.

Guests included: Senators David J. Brightbill (R-Lebanon) and Michael A. O'Pake (D-Berks); Representatives David G. Argall (R-Schuylkill), Dante Santoni Jr. (D-Berks), Thomas R. Caltagirone (D-Berks), Samuel E. Rohrer (R-Berks), Sheila Miller (R-Berks), Dennis E. Leh (R-Berks), and Paul W. Semmel (R-Lehigh). Also, Tim Smith attended, representing Congressman Timothy Holden.

Each member of the legislative panel spoke for five minutes, followed by physician questions and comments.

SPECIALTIES' NEWS

OTOLARYNGOLOGISTS ELECT NEW OFFICERS

Dr. McKenna

Ernest L. McKenna Jr., MD, Wayne, was installed as president of the Pennsylvania Academy of Otolaryngology-Head and Neck Surgery at the academy's annual convention in June. Dr. McKenna succeeds Frank I. Marlowe, MD, Philadelphia.

A former president of the Philadelphia Laryngological Society and former chairman of the Philadelphia College of Physicians, Section of Otolaryngology, Dr. McKenna is clinical professor, Department of Otolaryngology, Jefferson Medical College of Thomas Jefferson University, Philadelphia. He also serves as president of the medical staff and senior attending otolaryngologist at Bryn Mawr Hospital.

At the same time, Alan W. Miller, MD, Norristown, was voted president elect to succeed Dr. McKenna at the end of his term in June 1995. Carl L. Reams, MD, Danville, was elected secretary-treasurer, the office held for three years by Dr. Miller.

Also at the convention, the academy presented its highest honor, the Distinguished Service Award, to Louis D. Lowry, MD, professor and chairman of otolaryngology, Jefferson Medical College, and George H. Conner, MD, professor and chairman of otolaryngology, Penn State's Milton S. Hershey Medical Center, Hershey. Dr. Lowry served as the first president of the academy when it was formed as an independent society in 1991. Dr. Conner is a past president of the former Pennsylvania Academy of Ophthalmology and Otolaryngology.

YPS NEWS

YOUNG PHYSICIANS PLAN OCTOBER ASSEMBLY

The State Society's Young Physician Section (YPS) will hold its Eighth Annual Assembly meeting on October 20, 1994, at the Hershey Lodge and Convention Center.

An educational program, "Improving Cost-Effective Decision Making," will be held from 1:00-4:00 p.m. Presented by David Shulkin, MD, director of clinical outcome assessment and quality management, University of Pennsylvania, Philadelphia, the program will provide participants with skills to address issues on cost-effective decision making. Category I continuing medical education credit is pending.

Also at the meeting, young physicians may sign up to participate in the YPS computer network, piloted this year to the YPS Governing Council and now available to all young physicians.

The assembly is free to Society members and $60 for nonmembers. For more information, call the YPS at (800) 228-7823 or (717) 558-7750.

AMA-YPS awards

Each year, the AMA Young Physician Section awards community service awards for exemplary projects completed by young physicians. For more information about the 1995 awards program, call the AMA Department of Young Physician Services at (312) 464-4748.

MEDICAL SCHOOL NEWS

PHILADELPHIA PROGRAM BRIDGES GAPS IN CARE

Students from six medical and other health professional schools in Philadelphia participated this summer in "Bridging the Gaps: Philadelphia Community Health Internship Program."

Under the program, first-year medical students work side-by-side with nursing, dental, social work, law, and physical and occupational therapy students to address the health care needs in underserved communities surrounding their institutions. Projects range from homeless shelters to summer day camps to community health clinics.

During its first three years, the program has evolved from 18 students at a single medical school working within the local community, to a multi-institutional, interdisciplinary collaborative effort spanning the city. This year, approximately 150 students participated.

Program officials cite several benefits: Future health care professionals are gaining a comprehensive view of the communities in which they live and learn medicine. This in turn is creating a pool of trainees who understand the importance of preventive medicine, the need for primary care providers, and the importance of community responsive health services. Also, residents of Philadelphia's more underserved areas are benefiting from the help of students who are committed to bringing about change through direct service.

During the next year, the Philadelphia consortium is hoping the work with other academic health institutions in Pennsylvania, possibly to institute similar programs in their areas. The group also hopes to disseminate a service/training model nationally by 1997.

MCP, HAHNEMANN RECEIVE GENERALIST GRANT

The schools of medicine of the Medical College of Pennsylvania (MCP) and Hahnemann University

are among 16 in the nation to receive an implementation grant from the Robert Wood Johnson Foundation's $32.7 million Generalist Physician Initiative. The Commonwealth of Pennsylvania also will contribute $1.5 million over three years for generalist medical education.

The foundation's initiative is designed to develop programs and partnerships that will encourage a higher percentage of medical students to choose careers in family medicine, general internal medicine, and general pediatrics. It responds to a decreasing supply of physicians in these fields, which coincides with an oversupply of physicians in many other specialties.

Beyond being in the select group of grant recipients, the two schools of medicine are the first in the U.S. to merge since World War I. The combined institution will accept its first unified class in 1995.

Hahnmann's Brain Tumor Center

In related news, Hahnemann University Hospital has established The Brain Tumor Center at Hahnemann to provide comprehensive, multidisciplinary services for patients with brain tumors.

Dedicated to treating some of the most difficult brain tumor cases, the center draws on the broad array of Hahnemann professionals and services in neurology, neurosurgery, radiation and medical oncology, radiology, pathology, nuclear medicine, ophthalmology, neuropsychology, social work services, and rehabilitation. This multidisciplinary approach offers brain tumor patients a greater chance of getting the most appropriate treatment plan from among several available options.

NIH GRANT TO EXPAND DISEASE RESEARCH AT PITT

Researchers at the University of Pittsburgh School of Medicine have received a grant in excess of $1 million from the National Institutes of Health (NIH) to expand their investigation of possible environmental and genetic causes of childhood Hodgkin's disease.

The case-control study, currently involving 300 patients with the disease and 484 control subjects from across the U.S. and Canada, will be expanded to study a total of 415 patients and 675 control subjects.

To date, the study has found that approximately 36 percent of the Hodgkin's disease cases have Epstein-Barr virus in their tumor tissues, according to Seymour Grufferman, MD, DrPH, professor and chairman of family medicine and clinical epidemiology at the school, and principal investigator for the study. He says the expanded study will look at the role of the virus through molecular testing, as well as risk factors such as breast feeding, socioeconomic status, parents' use of recreational drugs during pregnancy, childhood environmental exposures, and parents' occupational and environmental exposures.

"Health of the Public"

In related news, the University of Pittsburgh has been selected to participate in the $7.8 million "Health of the Public" program, sponsored by the Pew Charitable Trusts and the Robert Wood Johnson Foundation.

The university is one of 28 academic health centers developing projects that emphasize the "population perspective" in health professions education, patient care, and research. Pitt will use program resources to work with residents of Terrace Village—a Pittsburgh public housing project—to identify health-related problems and implement useful solutions for them.

BECK PSYCHIATRIC INSTITUTE OPENS IN BALA CYNWYD

Aaron T. Beck, MD, one of the world's leading psychiatrists and psychological theorists and universally recognized as the founder of the form of psychotherapy known as cognitive therapy, and Judith S. Beck, PhD, renowned cognitive therapist, author, and international speaker, announced the opening of the Beck Institute for Cognitive Therapy and Research in Bala Cynwyd on July 1.

The new, nonprofit institute is the fulfillment of a dream shared by father and daughter, Aaron and Judith, who envision it as the area's premier treatment center for cognitive therapy, and the international headquarters for training cognitive therapists and

Drs. Judith and Aaron Beck

disseminating information about cognitive therapy throughout the world. The institute will offer complete psychological and psychiatric services including evaluation, cognitive therapy, and pharmacology when indicated.

MEDICAL STUDENT NEWS

PENN STATE HOSTING CAREER DAY CONFERENCE

The Pennsylvania State University Chapter of the American Medical Student Association will hold a Career Day Conference on Saturday, October 15, 1994, at Penn State's Milton S. Hershey Medical Center, Hershey.

Speakers will discuss the business aspect of medicine, getting the residency of your choice, and health care in the next century. Also, alumni of Penn State's College of Medicine will talk about their specialties.

For more information, write to David Chang, Medical Student Box 485, P.O. Box 850, Hershey, PA 17033.

PMSLIC ISSUES SEMI-ANNUAL CLAIMS STATISTICS REPORT

The Pennsylvania Medical Society House of Delegates Resolution 86-17 requires that the Pennsylvania Medical Society Liability Insurance Company (PMSLIC) report certain claims statistics to the House of Delegates on a semi-annual basis.

In response to this resolution, PMSLIC published the first semi-annual report in the September 1987 PENNSYLVANIA MEDICINE. The data included in the following tables is an update of PMSLIC's claims experience as requested by the resolution.

→

Note: To more accurately reflect PMSLIC's experience, the tables have been expanded this year to include all claims and suits indexed against PMSLIC insureds since the company's inception in 1978. The following tables represent data for January 1, 1978 through June 30, 1994.

Table 1 (below): Joinders—Includes PMSLIC physicians joined by other parties and other parties joined by PMSLIC.

Table 2 (at right): Number of claims and suits filed by specialty, January 1, 1978-June 30, 1994.

Table 3 (page 33): Breakdown of PMSLIC claims and suits filed by specialty, January 1, 1978-June 30, 1994.

Direct any questions or comments about this material to Jane L. Conley, Director of Medical Research and Statistics, PMSLIC, P.O. Box 8375, Harrisburg, PA 17105-8375, (717) 558-7500, extension 501.

TABLE 1: Number of cases in which a physician is joined as an additional defendant by a hospital or physician

Since beginning tracking joinder data on April 7, 1987, 120 PMSLIC insureds were joined by other parties through June 30, 1994, as follows:

PMSLIC Insured Joined By:	Number of Times:
Hospital	58
Other Physician	26
Nursing Home	3
Commercial Business	8
Plaintiff	4
Pharmacy/Pharmacist	9
Manufacturer	2
Drug Company	3
Other	7
TOTAL	**120**

During the same period, PMSLIC joined 21 other parties, as follows:

Party Joined By PMSLIC:	Number of Times:
Hospital	2
Physician	11
Drug Company	1
Manufacturer	4
Other	3
TOTAL	**21**

TABLE 2: Number of claims and suits filed by specialty from January 1, 1978-June 30, 1994

Specialty	Total Claims and Suits	Specialty	Total Claims and Suits
Allergy	21	Pathology	52
Anesthesiology	465	Pediatrics	423
Cardiac Surgery	31	Plastic Surgery	391
Cardio-Thoracic Surgery	64	Preventive Medicine	1
Cardio-Vascular Surgery	139	Proctology	11
Cardio-Vascular & Thoracic Surgery	141	Psychiatry	75

Orthopedic Surgery	1,758		
Otolaryngology	291	**GRAND TOTAL**	**15,049**

Keep in mind that the specialty totals are affected in part by the number of PMSLIC insureds in each specialty. In addition, some specialties are relatively new rating classifications and were not in existence for the entire time period represented.

Next Month in Pennsylvania Medicine...

Medicine just isn't what it used to be—reform, technology, and mergers have quickly become household words.

Next month, PENNSYLVANIA MEDICINE takes a look at the changes in medicine with a feature on new computer options and a special insert updating memebrs on health system reform, hospital mergers, Pennsylvania Blue Shield changes, and the progress of the Society's newest subsidiary—the PennMed Member Services Company (PSMSCO).

Also, look for a one-on-one with John H. Hobart, MD, president elect of the Society.

October issue due in your mailbox mid-month.

** Claims and suits filed during this period resulted from policy years 1978-1994. PMSLIC's limit of liobility is $100,000 per incident for policy years 1978-1982, $150,000 for 1983, and $200,000 for 1984-1994.*

Keep in mind that the specialty totals are affected in part by the number of PMSLIC insureds in each specialty. In addition, some specialties are relotively new rating classifications and were not in existence for the entire time period represented.

Pediatricians Target Child Care Programs

Maureen Hoepfer

Susan S. Aronson, MD, FAAP, is a clinical professor of pediatrics at the University of Pennsylvania and a primary care pediatrician at the Children's Hospital of Philadelphia. Since the early 1970s, Dr. Aronson has been involved in efforts to improve early childhood care and education programs in Pennsylvania. Currently, she serves as director of the Early Childhood Education Linkage System of the Pennsylvania Chapter of the American Academy of Pediatrics. The program provides health professional consultation, training, and technical assistance to improve early childhood education and child care programs in the commonwealth.

More than one-third of children under the age of five are in some kind of group care setting, according to the U.S. Census Bureau. Unlike their school-age counterparts, these younger children in group care often have no immediate access to health professional input. "Most child care programs do not have a nurse who visits the site or who they can call if they have questions, which is available today in all Pennsylvania schools," says Susan Aronson, MD. "And these child care programs serve younger, more vulnerable children than are found in most schools."

Dr. Aronson says improving the quality of care received in early childhood settings has been a high professional priority for her. "Child care is a part of our social network that has received too little attention and support," she explains. "Each of us has a responsibility to nurture children because each child is a potential precious replacement for ourselves. We must take care of every one of them."

Dr. Aronson

Early involvement was spark

Dr. Aronson's first exposure to child care programs was as a consultant for Head Start, an early childhood education program sponsored by the federal government. "I learned about the early childhood education profession and the uniqueness of group care from that experience," she says. "Many of my colleagues asked me why I was dedicating so much attention to this area, which was not considered a legitimate professional focus in medicine at that time. I felt that although I could interface with families one at a time and help children grow and develop individually through my practice, the opportunity to impact on many children's lives was greater working with child care professionals and their programs."

At that time, Dr. Aronson was on the faculty at the Medical College of Pennsylvania. She teamed up with Richard Fiene, PhD, a policy research planner with the Pennsylvania Department of Public Welfare (DPW), to develop a health advocacy training program which sought to link health professionals with early childhood education professionals working in group care settings.

The program was federally funded as a demonstration project, but fell victim to federal cutbacks a few years later and ceased to exist in 1980. "Between 1980 and 1989, the people we had trained in Pennsylvania had no support system to back them. We needed to rebuild and expand the support."

In 1988, Dr. Aronson drew together a working group that included representatives from both the state and federal governments, and health care and child care profession-

Ms. Hoepfer is a marketing associate for the Society's Educational and Scientific Trust. This article is one in a series, begun in January 1993 and ongoing through 1994, sponsored by the Trust's endeavor to address public health needs, Keystones of Public Health.

als. "We looked at what we could do and how we could do it in Pennsylvania," she says. "We decided we needed to gather the various health, education, and safety resources useful to child care providers across the state and then link these resources with the child care providers."

"ECELS" provides vital link

Start-up funding for the Early Childhood Education Linkage System (ECELS) came from federal Title V Maternal and Child Health Improvement Program and Robert Wood Johnson Foundation grants. Because of the level of funding received, the program was implemented statewide from the beginning. The Pennsylvania Chapter of the American Academy of Pediatrics, for which Dr. Aronson served as president from 1984-1988, administers the program.

To improve the quality of group care, ECELS has focused on the following areas:

- *Consultation:* ECELS provides telephone advice to 200-300 callers a month. After advising the caller, a program staff member offers a linkage with a local health professional for further support. Currently, the ECELS resource list includes 800 health consultants. Although the bulk of these consultants are nurses, approximately 180 are physicians. The ECELS registry also includes dentists, optometrists, physical and occupational therapists, speech pathologists, and various other health professionals.
- *Training:* To address the ongoing need for entry-level training of child care professionals, ECELS arranged the delivery of more than 6,000 units of the American Red Cross Child Care Course to child care providers statewide. ECELS has also recruited and trained more than 130 instructors who teach child care workers and others how to check child immunization records. Additional training offered or arranged by ECELS covers preventing pedestrian, bicycle, and motor vehicle injury; infant and toddler health issues; and the role of the health consultant.
- *Educational Materials:* ECELS publishes a quarterly newsletter, *Health Link*, which is distributed to all licensed or registered early childhood programs in the state, and operates a free lending library of audiovisual materials. The program staff has also developed a training curriculum for child care providers, a model booklet of health care policies, fact sheets on common childhood diseases and health problems, and various administrative forms, such as health assessments, playground supervision schedules, and communication between parents and staff.
- *Surveillance and Targeted Assistance:* ECELS uses pooled performance data collected from early childhood programs since 1990 to identify common problems. The data are used to select topics covered in the newsletter, training offerings, and targets for resource development. During 1992, ECELS taught all Pennsylvania child care licensing inspectors how to check children's records for complete immunizations and other routine health services. Now, the licensing staff routinely sample 10 percent of records at each site. The state then aggregates the data, and forwards the summary and raw data to ECELS for corrective action. ECELS contacts child care providers whose health care records show children lacking immunizations or other routine health services. ECELS staff members arrange for local health professionals to work with the child care programs on improving documentation and linking children who need services with a medical home.

Child care study reveals needs

Dr. Aronson says an evaluation component was built into the ECELS proposals when the work group first applied for grants. Dr. Fiene drew a study population of child care professionals from a state list of child care facilities that included Head Start programs, nursery schools, family child care homes, and child care centers.

"During the demonstration period between 1990 and 1993, we measured the performance of the providers, and the results showed that even with very limited hours of contact with health professionals, the programs significantly improved. Those programs that had assigned nurse consultants made even greater gains than those that did not."

As a result of these evaluations, the Pennsylvania Chapter of the American Academy of Pediatrics was able to justify maintaining the ECELS program after the original grants ran out. The program is currently funded through contracts with both the Pennsylvania Departments of Health and Public Welfare.

Dr. Aronson says that ECELS has made steady progress in upgrading its services and demonstrating that the program is helping child care providers improve the quality of their care. "We still have a lot of work to do," she emphasizes. "Our goal is to ensure there is quality child care available to every child in Pennsylvania. We're a long way from achieving that success."

Want to Help?

Physicians have many opportunities to improve the child care environment in their communities, according to Susan S. Aronson, MD. Child care centers, Head Start programs, and other early childhood education facilities are always looking for physicians to serve on their boards or become medical advisers. ECELS also encourages physicians to volunteer for its health consultant registry.

The registry offers physicians various options for becoming involved. For example, a physician may choose to work with a specific child care and early childhood education program, teach classes on health-related topics to child care providers, be available for telephone consultation to a child care provider, or provide routine health care services for children in group settings who lack needed care. Although the time commitment varies depending on what area a physician chooses, on average an ECELS health consultant donates six or seven hours a year to the program.

For more information about the ECELS program, or to enroll as a health consultant, call JoAnn Martin, MA, MSN, RN, ECELS coordinator, at (800) 24-ECELS.

New Doctors Entering Revived Market

The Health Care Grap

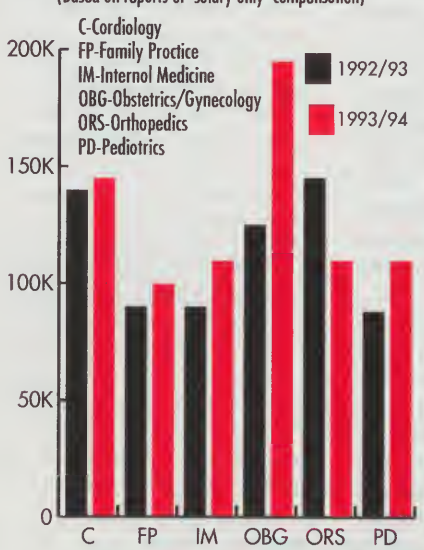
For the past several years, as health system reform loomed on the horizon, physicians' starting salaries seemed to reflect the expected change to a tighter market, with little or no increases and decreased fringe benefits.

Perhaps it is no coincidence, then, that since President Clinton's health system reform plan has become stalled over the past year, starting salaries for new physicians have increased, in some cases rather dramatically, from the previous year. In 1991 and 1992, salaries for specialties were flat or actually decreased, while primary care physicians (family practice, pediatrics, and general internal medicine) showed slight increases as buyers for these practices competed to offer the best purchase price.

Fringe benefits still down

However, higher salaries were not matched this year with more or better fringe benefits. For the second consecutive year, hiring physicians and groups are being more restrictive. Even traditional benefits, such as vacation and continuing medical education time, are not being offered by a larger number of employers.

Average Starting Salaries of Selected Specialties
(Based on reports of "salary only" compensation)



There is encouraging news concerning salaries for physicians—specialists and primary care givers alike—hunting for their first jobs. When looking at salary alone, obstetrician-gynecologists had the most dramatic jump in salaries, but other specialties, such as cardiology, also increased (see graph, below left). Orthopedists were one of the few specialties that suffered a decrease in starting salary. However, when comparing salary and incentives, orthopedists' compensation increased dramatically.

Salary, compensation reflect competition

Salary and compensation, as compared to salary alone, continue to make up the majority of compensation arrangements in new physicians' contracts, reflecting the competitive nature of today's health care environment. For the second consecutive year, 59 percent of new physicians' contracts have included salary and incentive arrangements. This trend has been increasing steadily: Two years ago it was 57 percent and three years ago 52 percent.

The biggest salary increases occurred in the more rural regions of the country, showing that physicians in those locations need to pay more to attract doctors. Increases also were seen in the regions preferred most by young doctors.

Trends from the past year

Several other trends have developed over the past year:

- Only 61 percent of this year's contracts show a provision for *restrictive covenants* or liquidated damages. This seems to reflect a lack of concern from hospitals and other entities about young physicians leaving the practice to compete. Last year, 72 percent of the contracts included restrictive covenants.
- As for *malpractice coverage*, there was a distinct shift toward occurrence coverage away from claims made coverage. This may reflect a general trend toward this type of arrangement for all physicians, as well as an indication of the economic situation.
- As salaries increase, *fringe benefits* provided have been tightened. For instance, sharp drops were recorded in the number of employers who provide subscriptions to medical journals, payment and time allowances for continuing medical education, and sick time. Even the number of employers who provide vacation for the first year of employment decreased, from 96 percent last year to 93 percent this year.
- The only increases came in *pension/profit sharing*, from 58 percent last year to 64 percent this year, and *automobile reimbursements*, from 24 percent to 26 percent, respectively. Three-quarters of employers who offer pensions begin eligibility within the first year, with 23 percent offering it after two years, and three percent after three years.
- An interesting change from 1993 was the number of *sick days* provided. As in 1993, 41 percent offered 10 to 20 days of sick leave in the first year of employment, but no employers offered 21 to 30 days of sick leave, a plunge from 34 percent last year. Instead, 26 percent offered 31 to 50 days, and 30 percent offered fewer than 10, an increase from last year when 21 percent offered fewer than 10 sick days in the first year.
- The number of employers providing health insurance, disability insurance, and medical society dues decreased, but not by significant amounts.

Although the increase in physicians' starting salaries was good news after two years of little change, it will be interesting to note the effect on salaries if some form of health care legislation is passed later this year.

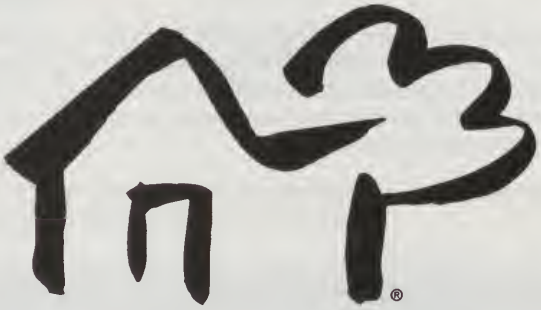
Physicians and their immediate family members can receive preferential treatment in mortgage financing!

The AMA-Sponsored Home Mortgage Program is provided exclusively by Prudential Home Mortgage and offers physicians special features such as:

- **Loan commitment* before you begin searching for a home that can improve your bargaining power with sellers**
- **Low down payment programs**
- **Zero point option**
- **Fast loan decisions, often within 24 hours****
- **Full refund of appraisal cost after closing ($360 or more)**
- **Competitive rates on a wide variety of mortgage products**
- **Toll-free application process**
- **No-cost 60 day interest rate lock**



Just call...1-800-443-8877

Mortgage counselors are available to assist you from 8 a.m. to midnight (Eastern time) Monday through Friday.

Prudential Home Mortgage

*Your loan commitment will be subject to the terms and conditions stated in your commitment letter for this program.
**Eligibility requirements for the 24 hour loan decision include: Single family dwelling only, with a $500,000 maximum loan amount. Condos, co-ops, second homes and investment properties are excluded. Also, because your loan decision is not subject to an appraisal, you may want to consult your legal advisor to include an appraisal contingency in your purchase contract. Other conditions may apply.

ACTIONS OF THE BOARD OF TRUSTEES, JULY 15-17, 1994

STRATEGIES FOR CHANGE REVIEWED BY BOARD

Following more than a year of study, the Society's Task Force to Enhance Physician Involvement presented to the Board of Trustees, at a special July retreat, 14 recommendations for organizational change.

The task force, headed by Robert N. Moyers, MD, past Society president, brought together physicians of various ages, backgrounds, and interests to investigate and initiate means to enhance the Society's strengths. Through studies, surveys, focus groups, staff response, and intense discussions, the task force identified strategic initiatives.

The board approved in concept recommendations that would:

- allocate the Society's resources based on membership priorities;
- provide an internal evaluation process to continually examine the effectiveness of Society programs and activities; and
- expand two-way communication between members and leadership through use of new technologies.

The board also approved the concept of a recommendation from the board to the 1994 House, outlining ways in which the House could more closely focus its business on priority issues.

Prioritization

A major focus of task force recommendations was establishing and maintaining membership priorities within the budget.

The task force stated, "Now, in a time of finite resources, to better serve its membership the Society must prioritize initiatives based on a systematic and continual process of collection, analysis, and response to grassroots needs and desires."

The task force also suggested that the board revise its reporting requirements to ensure that all recommendations submitted by other bodies are consistent with established priorities.

Membership-driven process

A second means for prioritization recommended by the task force was the development of a "membership-driven process." This term was coined by the task force to describe an organization that responds to the needs of its entire membership, rather than to an individual member's needs and wants.

The process would include five steps: 1) obtain input from members, and gather external data; 2) analyze input and data; 3) establish priorities based on input and data; 4) act on established priorities; and 5) provide feedback, including priorities and associated benefits, to membership.

Communication/infrastructure

The board approved the concepts recommended by the task force to expand two-way communication with the membership.

However, rather than "top-down communication" from leaders to members, the task force emphasized that the Society should investigate use of emerging technologies, better allocation of communication resources, and other means to remain flexible and responsive to the needs of the membership-driven process.

Noting that transforming the Society into a "membership-driven" organization will require participation by all the major Society organizational entities, the task force suggested that a study of the Society's infrastructure be initiated.

Details on implementating the task force's recommendations are to be considered at the board's September meeting.

Unification reports prepared

The board also heard a report on a resolution of the 1993 House of Delegates which called for a study of the effects of unification with the AMA. The report, with additional information requested by the board, will be submitted to the 1994 House. The board may also make its own recommendation to the House on the matter.

Dignity in Life, Dignity in Death

Living Will Brochure Bonus

The Society's Communications and Public Affairs Division continues to make the living will brochure, Dignity in Life, Dignity in Death, available for members to distribute to their patients. As a member, you are entitled to 100 free copies of the brochure, and additional quantities are available at a modest cost. For a limited time, an additional 25 copies are offered as a bonus. If you have not yet ordered your free brochures, you may request 125 at no cost. If you have received your free supply, you are entitled to an additional 25 at no cost.

How to Order:

Physicians may order brochures by using the order form below. For information, call the Pennsylvania Medical Society Division of Communications & Public Affairs at (717) 558-7750 or (800) 228-7823.

At The P·I·E Mutual, doctors rule. They sit on managing boards that consider new applicants. They form committees that review the merits of claims. Who knows better? And who cares more about controlling costs than people who themselves are paying premiums? Which helps explain why we can offer such attractive discounts to loss-free members. And how we've attracted 17,000 doctors, and become one of the largest medical professional liability monoline insurance companies in America.
Call 1-800-228-2335 for information.

THE P·I·E MUTUAL INSURANCE COMPANY

North Point Tower
1001 Lakeside Avenue
Cleveland, Ohio 44114
1-800-228-2335

712 Comly Circle
Upper Gwynedd
North Wales, Pennsylvania 19454
1-800-553-5556

Two new members were elected to serve on the board of the Pennsylvania Medical Society Liability Insurance Company (PSMLIC): **Carol E. Rose, MD,** assistant professor, University of Pittsburgh School of Medicine; and **Mark S. Reuben, MD,** staff physician, Department of Pediatrics, St. Joseph's Hospital, Reading.

Governor Robert P. Casey has appointed **Judy Carhart, MD,** Harrisburg, to the state's Board of Podiatry.

Sue Pan

Sue Pan, Pennsylvania Medical Society Alliance immediate past president, Berks County, was appointed to the AMA Alliance Health Promotion Committee. Also, **Barbara Prendergast,** former PMSA president, York County, was re-elected to a third one-year term as field director of the AMA Alliance.

Donna R. Farrell, DO, interim director, clinical education, Philadelphia College of Osteopathic Medicine, has received the American Medical Women's Association 1994 Gender Equity Award for promoting a gender-fair environment for the education and training of women to study and practice medicine.

Dennis Michalak, MD, was named chief, Division of Cardiovascular and Thoracic Surgery, Hamot Medical Center, Erie.

Evan J. Thomas, MD, associate attending psychiatrist, The Institute of Pennsylvania Hospital, Philadelphia, received the Resident of the Year Award from the Philadelphia Psychiatric Society.

Eugene S. Flamm, MD, professor and chairman of neurosurgery, University of Pennsylvania Medical Center, Philadelphia, has been elected to a six-year term with the American Board of Neurological Surgery.

Edward S. Cooper, MD, professor of medicine, University of Pennsylvania Medical Center, Philadelphia, has received the title of "Master" from the American College of Physicians.

Doris G. Bartuska, MD, professor of medicine and director, Division of Endocrinology, Diabetes and Metabolism, Medical College of Pennsylvania, Philadelphia, became a Fellow of the American College of Endocrinology.

St. Francis Medical Center, Pittsburgh, has appointed **Alan H. Klein, MD,** educational director of primary care orthopedics, and **Sang B. Park, MD,** chair, thoracic and cardiovascular surgery.

The Medical College of Pennsylvania, Philadelphia, has named **Jay L. Federman, MD,** as professor of surgery and chief, Division of Ophthalmology.

Canonsburg General Hospital has named **Eugene J. Hammell, MD,** a general surgeon, to its board of directors.

Monongahela Valley Hospital, has named the following officers: **John R. Paluso, MD,** president; **Richard A.**

Specialty Society Elections

Editors Note: At press time, the following election results were available.

John R. Quinn, MD, medical director, Department of Anesthesiology, Lee Hospital, Johnstown, was installed as president of the Pennsylvania Society of Anesthesiologists.

Dr. Vergare

Michael J. Vergare, MD, acting chairman, Department of Psychiatry, Albert Einstein Medical Center, Philadelphia, was installed as president of the Psychiatric Physicians of Pennsylvania. Other officers are: **Thomas L. Horn, MD,** president elect; **William R. Dubin, MD,** vice president; **Gene L. Cary, MD,** secretary; and **Gordon H. Clark Jr., MD,** treasurer.

Eugene N. Myers, MD, professor and chairman, Department of Otolaryngology, University of Pittsburgh, was elected president elect of the American Board of Otolaryngology.

William R. Poller, MD, clinical associate professor of radiology, University of Pittsburgh School of Medicine, was elected as the 1994-95 president of the Pennsylvania Radiological Society.

Russell Bieniek, MD, medical director, Saint Vincent Health Center, Erie, became the 24th president of Pennsylvania Chapter of the American College of Emergency Physicians (PaACEP). Other officers include: **Steven J. Parrillo, DO,** president elect; **Alan T. Forstater, MD,** vice president; **Allan B. Wolfson, MD,** secretary; **Howard G. Hughes, MD,** treasurer; and **Richard M. McDowell, MD,** immediate past president.

Also, **David K. Wagner, MD,** professor and chairman, Department of Emergency Medicine, Medical College of Pennsylvania, Philadelphia, has received PaACEP's Meritorious Achievement Award. Dr. Wagner was given the award for his efforts to guide medical students and physicians to a career in emergency medicine.

The Pennsylvania Academy of Family Physicians has announced election of the following officers: **Neil Lesitsky, MD,** Albrightsville, president; **Lila Stein Kroser, MD,** Philadelphia, president elect; **Peter Cognetti, MD,** Clarks Summit, vice president; **Mark D. Burd, MD,** Danville, vice speaker of the academy's House of Delegates; **John Woodyear Jr., MD,** West Newton, speaker of the house; **Robert M. Kemp, MD,** Lancaster, treasurer; and **Thomas J. Weida, MD,** immediate past president. The academy has also awarded **Irwin Becker, MD,** Philadelphia, "Family Physician of the Year for 1994."

Long, MD, president elect; **James A. Solan, MD,** secretary/treasurer; and **Robert R. Urban, MD,** immediate past president.

Dr. Lannutti

Pat A. Lannutti, DO, Philadelphia College of Osteopathic Medicine professor, co-vice chairman, Department of Internal Medicine, and chairman, Division of General Internal Medicine, has received the 1994 Christian R. and Mary F. Lindback Foundation Award.

Thomas Jefferson University, Philadelphia, has announced the following appointments: **Gregory C. Kane, MD,** assistant professor of medicine; **Leo Katz, MD,** clinical instructor in medicine; **Mary E. Melton, MD,** assistant professor of medicine; **Jeffrey H. Millstein, MD,** clinical instructor in medicine; and **James S. Studdiford III, MD,** assistant professor, Department of Family Medicine.

Chestnut Hill Hospital, Philadelphia, has named **Gerald Bertiger, MD,** director of the hospital's endoscopy unit.

Richard Sullivan, MD, medical director, Chestnut Hill Rehabilitation Hospital, Wyndmoor, is the author of the chapter titled "Rehabilitation of the Amputee" in the textbook *Vascular Surgery: Principles and Practices*.

Frank W. Bowen Jr., MD, director of newborn pediatrics, Pennsylvania Hospital, Philadelphia, has been appointed chapter chair of the Southwest Pennsylvania Chapter of the March of Dimes.

Philadelphia Heart Institute, Presbyterian Medical Center, has named **David M. Elbaum, DO,** co-director of the Heart Repair Program.

B. Franklin Diamond, MD, was appointed chief, Division of Neurology, Abington Memorial Hospital.

Joseph V. Koehler, DO, Norristown, was re-elected to the position of corporate member of Pennsylvania Blue Shield's board of directors.

Freddie H. Fu, MD, Pittsburgh, was elected to the board of directors of the Arthroscopy Association of North America.

Victor M. Bove, MD, chief of clinical services, Wernersville State Hospital, was named a fellow of the American College of Physician Executives.

Toni S.M. Casale, DO, Camp Hill, was appointed as an additional delegate to the Pennsylvania Health Care Cost Containment Council's Education Committee.

Gregory R. Frailey, DO, was appointed medical director, Ambulatory Care Services, Williamsport Hospital and Medical Center.

Hanover General Hospital has announced the following appointments: **Gary J. Baggett, DO,** medical director, Occupations Health Service; and **Steven J. Karp, DO,** medical director, Psychiatric Center.

Dr. Gottlieb

Friends Hospital, Philadelphia, has appointed **Gary L. Gottlieb, MD,** director and chief executive officer for the Northeast Philadelphia Psychiatric Hospital.

The National Alliance for the Mentally Ill has awarded the Exemplary Psychiatrist Award to **Michael Tronetti, DO,** Erie.

Herbert G. Wendelken, DO, was appointed chairman of gynecologic surgery, Springfield Hospital.

Penn State's Milton S. Hershey Medical Center has named **Thomas M. Krummel, MD,** the John W. Oswald professor, chair of the Department of Surgery, surgeon-in-chief of the University Hospital, and director of the Section of Surgical Sciences.

Sharon Kiely, MD, director, Medical Ambulatory Care, The Western Pennsylvania Hospital, Pittsburgh, was one of three physicians appointed by President Clinton as a 1994-95 White House Fellow—special assistant to senior White House officials and cabinet-level officers. The White House Fellows program places exceptionally talented men and women in full-time paid positions for a year at the White House and cabinet-level agencies.

Michael McCarthy, MD, assistant director, Strecker Program for Substance Abuse, and attending psychiatrist, The Institute of Pennsylvania Hospital, was elected as a McLaughlin Candidate Fellow of the American College of Psychoanalysts.

The Pennsylvania Hospital, Philadelphia, has appointed **R. Michael Buckley, MD,** and **Allan B. Wells, MD,** to the hospital's board of managers.

Scot A. Fisher, DO, Villanova, was appointed chairman, Department of Radiation Oncology, by The Graduate Hospital, Philadelphia.

The Pittsburgh Cancer Institute, University of Pittsburgh Medical Center, has appointed **James R. Jett, MD,** co-director, Comprehensive Lung Cancer Center.

Magee Rehabilitation, Philadelphia, has appointed **Daniel E. Weinstein, MD,** medical director, Brain Injury Rehabilitation.

J. David Ogilby, MD, has been named director, Cardiac Catheterization Laboratories, Philadelphia Heart Institute, Presbyterian Medical Center, Philadelphia.

CORRECTION

In *Newsmakers* of the June 1994 issue of PENNSYLVANIA MEDICINE (page 42), Kim Cantees, MD, of Pittsburgh, was inadvertently omitted from the list of State Society physicians named to the AMA's Federation Study Consortium. Dr. Cantees is representing the University Anesthesiology and Critical Care Medicine Foundation on the study group. Her participation also should have been noted in *Policy Briefs, AMA News*, in the July issue of PENNSYLVANIA MEDICINE (page 35).

Workers' Comp: A New Direction

Donald E. Harrop, MD

New amendments to Pennsylvania's workers' compensation law have allowed the Keystone Peer Review Organization to conduct a new type of review and may open other doors, too.

Unlike the provisions of the Automobile Insurance Law (Act 6 of 1990), workers' compensation cases are randomly assigned by the Bureau of Workers' Compensation to utilization review organizations (UROs) for review, after determining the type of review needed in relation to the qualifications of the URO. Also unlike Act 6, new amendments to the Workers' Compensation Act, effective last August, have provided the Keystone Peer Review Organization (KePRO) with the opportunity to become involved with workers' compensation review.

Under Act 6, the insurance companies select their own UROs. Even though KePRO is probably the largest review organization in the state, none of the automobile insurers have selected us for any case review since Act 6 became law about four years ago. Perhaps the auto insurers distrust us because KePRO is a physicians' organization, and they may believe that physicians will be biased in favor of the providers of care.

To start the workers' compensation review on the effective date of the law, the bureau adopted the Insurance Department's list of UROs qualified to conduct Act 6 review. At the time of this writing, the bureau is developing its own criteria for determining the qualifications of a URO. For workers' compensation, KePRO has been classified as a "comprehensive" URO, meaning we are qualified to review cases involving any specialty, including chiropractic, dental, psychological, physical therapy, etc.

Because review of some of these specialties is not included in our Medicare contract, we had to add a whole new cadre of professionals for workers' compensation review. Also, KePRO had to assure that our physician advisers who review for Medicare were agreeable to doing workers' compensation review. The physician advisers were asked to sign an agreement stating that they were willing to perform other review in addition to Medicare review.

With the help of some state associations, other necessary specialists were identified and contacted. Those who agreed to review for us were then put through a credentialing process similar to what we do for Medicare physician advisers.

We received our first case for review on October 18, 1993, and as of June 30, 1994, KePRO had completed review of 102 cases. We are also doing reconsiderations.

Considering that KePRO has probably reviewed close to one-and-a-half-million Medicare cases of various types since starting in business in 1985, we were sure that we knew pretty much all there was to know about review. Admittedly, this caused us to be somewhat indignant when we received a letter of complaint from one of the workers' compensation carriers because we did not provide sufficient detail to explain why a case had been approved. After conversations with the bureau and with the carrier, we realized that there was quite a difference between the expectations of the Health Care Financing Administration (HCFA) and the insurers.

HCFA's main interest in documentation of review results is that an adequate reason be provided in the case of a denial of benefits. They don't seem to worry too much about lack of detail when a physician adviser approves a claim. However, the insurance companies are more concerned with documentation of approvals to assure that they are only paying necessary claims.

This was the only question raised about our workers' compensation review thus far, and our conversation with the carrier apparently resolved the problem. I'm glad we learned our lesson and corrected our problem as quickly as we did.

Hopefully, some of those insurers who underwrite both workers' compensation and automobile insurance will come to realize that KePRO review is fair and unbiased, and may allow us to do some Act 6 review for them as well. Eventually, they may even realize that we are fair and unbiased because of the fact that we *are* a physicians' organization, not in spite of it.

Dr. Harrop is president of the Keystone Peer Review Organization.

Subscribers Receive 15 Percent Dividend

Many State Society members recently received dividend checks representing a 15 percent return of the premium paid for workers' compensation coverage through the Society-endorsed Dodson Workers' Compensation Plan.

This is the twenty-first year in a row that Dodson has returned a dividend to subscribing members. Total dividends paid, which now exceed $3 million, are possible because insured practices keep claims to a minimum.

The dividend payments are in addition to receiving a discounted premium when policies are issued. Dodson workers' compensation insurance continues to be one of the most competitively priced products in the market. Approximately one-third of State Society members now purchase their coverage through Dodson.

For more information, call (800) 825-9489.

PHYSICIANS WANTED

Western Pennsylvania—Board Certified or prepared emergency physicians needed for staffing a community hospital emergency department near the Ohio/Pennsylvania border. Please send CV to P.O. Box 99431, Pittsburgh, PA 15233-0431.

Pennsylvania—Physician group seeks full-time and part-time physicians for an emergency department of community hospitals in central and western Pennsylvania. Please send resume to P.O. Box 99431, Pittsburgh, PA 15233-0431.

Pittsburgh, Pennsylvania—Penn Group Medical Association (PGMA), a 100-physician multi-specialty group practice affiliated with the largest HMO in Pittsburgh, is seeking BE/BC physicians in: family practice, internal medicine, pediatrics, ob/gyn, and psychiatry. We are formally affiliated with major teaching hospitals and leading community hospitals in Pittsburgh. PGMA serves eight ambulatory care centers, all conveniently located near cultural, educational, recreational, and corporate activities. Excellent salary, and fringe benefits. For confidential consideration contact: Angela Lascola, HealthAmerica, 5 Gateway Center, Pittsburgh, PA 15222, or call collect (412) 553-7502.

Physician Wanted—Internal Medicine/General Practice must be bilingual English/Spanish physician full- or part-time to join fine busy practice near Philadelphia suburb of Cheltenham. Please call M. Finnegan (215) 549-3000.

Emergency Physicians—Emergency Physician Associates is seeking quality ED physicians for a variety of practice opportunities. Director and staff positions are available. EPA contracts with hospitals in NJ, PA, and MD for the provision of emergency medicine, urgent care and industrial/occupational health services. Our client hospitals are located in rural to urban areas with patient volumes ranging from 10,000 to 75,000. At EPA we offer physicians competitive compensation, flexible schedules and shifts, occurrence-based malpractice insurance, a variety of practice settings to choose from, cooperative working environments, and supportive medical directors and corporate staff. Interested candidates may contact EPA at 1-800-848-EPA-1.

Primary care physicians for Cincinnati, Ohio. Rated #1 city in the nation. Large, successful physician owned organization offers autonomy, excellent income/pension, signing bonus, benefits, call, vacation, and relocation. (800) 880-2028.

Board Certified/Board Eligible Family Practice Physician needed at Dunham Army Health Clinic, Carlisle, PA. Forty hours per week, no nights, no call, no weekends. Army civilian positions with liberal benefit package including full malpractice coverage. Salary comensurate with experience ranging from $70-87,000. Contact Colonel Bailey at 717-245-3041.

Solo board certified family physician seeking BE/BC non-smoking associate in family practice. No ob. Modern office, good staff, good salary. Partnership. James Thomas, MD, Eastwood Professional Center, Greensburg, PA 15601; (412) 837-5257.

Lancaster County, Pennsylvania—BE/BC FP to join active six physician practice in attractive small community in southcentral Pennsylvania, with quality schools and proximity to cultural centers. Full range of family practice experience in modern facility. No ob. Competitive salary and benefit package leading to long-term association. Contact Gary Scibal, MD, 562 W. Second Ave., Lititz, PA 17543. (717) 626-2167.

Pittsburgh Area—Our group of four BC family physicians is searching for select individuals who value the physician/patient relationship and are interested in a comfortable workplace. As our group expands, we have excellent opportunities available for BC/BE family MDs. Please call us to learn more. Contact: Peter Keim, MD, Valley Family Practice Center, 400 Second Ave., Tarentum, PA 15084; 412-226-1400.

BE/BC colleague sought for busy practice located hour south of Newark on the Jersey shore. Do you believe taking the time to talk to your patients and their families is important? Would you prefer not to deal with HMOs as long as possible? Would you like to make a good living in a traditional practice in an idyllic location? Employee with partnership potential, if desired. Confidential replies for additional details fax CV to Christine Ross, RN, at 314-863-1327, or call 800-776-5776.

Jersey Shore—One hour south of Newark. Busy practice, 20-30 office visits daily, minimum 10 inpatients, nursing home visits once per month, evening office hours once per week, call every other week night and one weekend per month. If a traditional practice, with a competitive salary, in an idyllic location appeals to you, fax CV to Christine Ross, RN, at 314-863-1327, or call 800-776-5776.

BC Family Medicine Physician? Avoid business hassles, become a hospital employee. Practice medicine in beautiful northwestern Pennsylvania. Call schedule of 1:10 or better. Flexible practice style. $110,000+ benefits year one. Shared profits after year one. For more details, contact Tony Almond at 800-776-5776.

Whatever your needs, you may qualify with HPSC for credit to finance new practice equipment. We also fund leasehold improvements, working capital, merchandise contracts – plus computers and other office equipment. And if you're looking to acquire a practice, we may fund up to 100% of the purchase price at competitive fixed interest rates (no "points", variables, or hidden fees.)

Our equipment lease is open-ended: add as your practice grows. We offer many innovative custom plans, all geared to cash flow, with tax benefits.

To stay close to our customers, we fund and service all of our accounts in-house. Call us. We've financed over 55,000 doctors. *We'd love to do your office.*

Macintosh Medical and Ophthalmic Software

PracticeMaker™ does it at a price lower than other Mac software:
- ONLY $1690! Multi-user, Manual, On-line help, 90 days of telephone support.
- Electronic claims to Medicare and PA Blue Shield with 2 years of updates!
- Prints HCFA 1500 (even to blank paper), Blue Shield OCR, Chart and recall labels!
- Accounts receivables and reports
- Word processing, medical dictionary.
- Contact lens inventory if needed
- Only $995 without electronic claims

The Dispenser™ for Rx dispensing: Meets PA state requirements. Prints labels for RX, chart, & receipt. Easy refills. Does inventory. Linkable to PracticeMaker's patient database OR can be stand-alone. Uses Costar's Labelwriter (not included) to print labels. $300 for stand-alone OR $250 when purchased with PracticeMaker!

Demos for PracticeMaker™ $25, The Dispenser™ $15. Refunded with software purchase. Printed information available at no charge. Physician designed and supported. Custom databases available!

Do you know someone who needs nursing care in their home?

We have a special person to take care of your special person.

Are your patients entitled and/or eligible for Medicare benefits? If you are not sure call **MEDICAL PERSONNEL POOL** and we will help you get the answer. Bear in mind that a person need not be a Social Security recipient or over 65 to receive Medicare services. People who are disabled for 2 years or more are eligible as are people who are in dialysis for 6 months of longer. **MEDICAL PERSONNEL POOL** provides a full range of **HOME HEALTH SERVICES,** as well as private duty nursing. We provide most of these services in the home as well as in the hospital and nursing home.

A Call for Change

Wilma C. Light, MD

Should women physicians become involved in organized medicine? I would answer a definitive yes! Women physicians can bring a somewhat different viewpoint to organized medicine than our male colleagues, and the views of *all* members are important.

Women now comprise approximately 40 percent of the graduating class in Pennsylvania medical schools, and our needs must be addressed. However, most women physicians have to balance their time commitments to family and to medicine in different ratios than our male counterparts.

My first involvement with organized medicine came as a junior at Jefferson Medical College of Thomas Jefferson University. Seven students, including myself, were able to attend an AMA meeting that year, at which we discussed medical school curriculum.

I then moved out of state and did not really become active in the Pennsylvania Medical Society until 1985. At that time, I was president of the Pennsylvania Allergy Society and had been invited to the State Society to meet key personnel so that I would become more comfortable in interacting with the Society.

Then came my involvement with the Society's Hospital Medical Staff Section. Attending the AMA's Hospital Medical Staff Section meeting was an eye-opener for me. This was at a time when outside forces were starting to change the way we practice.

The "villain" changed each six months. Many times back then it was the Health Care Financing Administration (HCFA) or the Joint Commission on Accreditation of Healthcare Organizations (JCAHO). Now, it is managed care and health system reform.

But what I took away from these meetings was the knowledge that we can learn from each other and the fact that we need to be united to deal with these large entities. If we don't defend quality patient care, no one else will. Government thinks bureaucracy will solve all problems, and managed care looks to the bottom line.

I have had the privilege of serving on the Society's Council on Membership—the last two years as chairperson. During the last year-and-a-half, I have also been working with the Task Force to Enhance Physician Involvement. Both the council and the task force have recommended changes to improve our Society, and the board has concurred (see page 38). The challenge now lies before the House of Delegates to take the ball and run with it.

"Although we have the strengths of a very talented professional staff and hard-working physician volunteers, change is needed."

Although we have the strengths of a very talented professional staff and hard-working physician volunteers, change is needed. If we leave the status quo, we will gradually lose relevancy to our changing membership, which will make us less effective in achieving our goals.

We need to become more focused, while not ignoring other concerns; we need to increase involvement of our rank and file, and streamline communications; and, most importantly, we need to become *membership driven!**

** Editor's Note:* ***Membership driven*** *is a term created by the Society's Task Force to Enhance Physician Involvement to describe an organization that responds to the needs of its entire membership, rather than to an individual's needs and wants. Proposed for the Society are focused priorities and a budgeting process reflective of those priorities.* *For more information, see pages 6 and 38.*

Dr. Light, a specialist in allergy and immunology from Latrobe, chairs the State Society's Council on Membership.

CONGRESS JUST CUT DOCTORS' RETIREMENT SECURITY BY $34,000 A YEAR– AND WANTS $2,700 MORE IN TAXES NOW.

Harry R. Tyler, Principal

Last year, Congress cut 36% from your retirement plan[1]. That means higher income taxes now[2], less money in your retirement fund to grow–and $34,000 less annual income when you retire[3].

The impact on your retirement will be dramatic–unless you act now. To have $100,000 a year of retirement income you will need at least $1.3 million in retirement assets[4].

Find out how you can protect your retirement security and increase your own plan contributions–without increasing contributions or costs for other employees.

Call 1-800-79-TYLER for a free copy of the Tyler Consulting Physician Retirement Security Checkup–including a 20-page booklet entitled, "Building a Secure Future." Call today.

TYLER *Consulting* Incorporated

GOSHEN EXECUTIVE CENTER • SUITE 200C • 1450 EAST BOOT ROAD • WEST CHESTER, PA 19380
1-800-79-TYLER
(610) 344-0900 FAX: (610) 344-7656

The following assumptions are based on a physician age 45; earning between $140-250,000 per year; retiring at age 65; annual investment growth of 10%; and a 20 year payout (8%) at retirement.

1. Beginning 1/1/94, maximum compensation eligible for contribution to a profit-sharing plan is $150,000–36% less than $235,840 before. Instead of a $30,000 contribution, only $22,500 can be contributed–7,500 less annually.
2. $7,500 additional income is taxed at 36% (marginal tax bracket based on $140-250K of taxable income.) The annual increase in your tax is $2,700.
3. $7,500 less is invested for 20 years. Assuming 10% annual return, your retirement fund is reduced by $429,000– cutting retirement security by $34,000 every year.
4. To maintain a $100,000 income (inflation-adjusted at 4%) for 20 years requires $1,348,674 in retirement assets.

An Interview with Our New President—page 14

John H. Hobart, MD
145th President of the Pennsylvania Medical Society

SOMETIMES THE BEST DEAL IS THE ONE YOU HAVEN'T HEARD ABOUT.

Maybe you haven't heard about the Medical Inter-Insurance Exchange (MIIX). After all, we're a relatively new player in Pennsylvania's medical professional liability insurance marketplace.

But ask your counterparts in New Jersey, and you'll find we've been getting rave reviews since we wrote our first policy there in 1977. We're proud that 98 percent of our 9,000 insured physicians renew their policies each and every year. With such an outstanding track record, we must be doing something right.

Perhaps it's our **innovative products**, such as our new **$500,000** HIV benefit that provides income protection — at no additional charge — for physicians who become HIV positive. We were the first professional liability insurer in the state of Pennsylvania to offer this coverage.

Or maybe it's our **commitment to service**, which includes 24-hour customer assistance and a claims staff that's the best in the industry. Our insureds know that MIIX makes sense financially, too, considering our outstanding discounts for new and part-time practitioners. We also offer flexible premium payment plans that help you manage your money.

Because MIIX is a **physician-owned company**, you can be assured that everything we do is designed with your best interests in mind. Call us today so you can join your peers who are already benefiting from the MIIX difference.

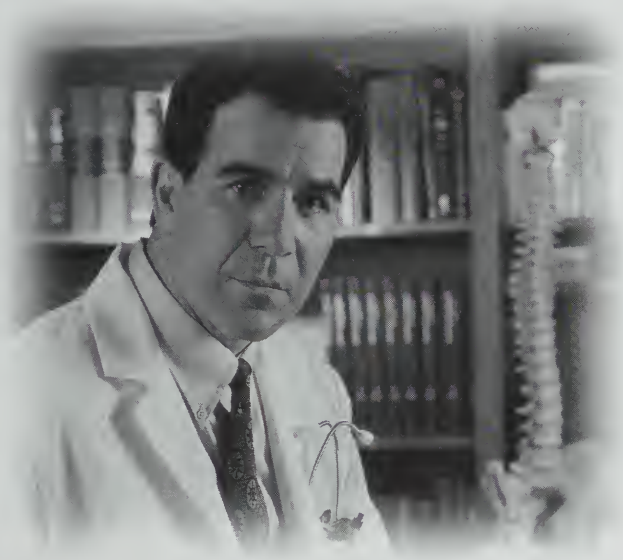
ANOTHER PMSLIC PROFILE

"Promises.

Every company makes them. Few keep them. Pennsylvania physicians



are lucky to have a resource like PMSLIC. I know. Early in my career I practiced in the Midwest. I saw colleagues get burned by a company promising the same medical liability protection for less money. I was pretty young, but luckily I didn't go with them. Unfortunately, my best friend, Phil, did. When his carrier went under, it looked as though a lot of good people would go down with it. Phil just got out by the skin of his teeth. A couple of our friends weren't so lucky. When I came to Pennsylvania, I checked out all my options. Know what? No company can match PMSLIC's record, or offer the same value-added services. Through the years, we've all heard many new carriers guarantee us big savings. But I can't see the value of saving a few dollars in the short run, if it means risking my future. Hey, if you don't believe me, give Phil a call. "

MEDIGRAM

NATIONAL HEALTH REFORM DECLARED DEAD...FOR NOW: Senator George Mitchell (D-ME) on September 26 officially declared health system reform dead for the 103rd Congress. The senator blamed Republicans for standing in the way of the 60 votes needed to bring a bill to the floor. AMA Chair P. John Seward, MD, reacting in the *New York Times,* said, "Rather than blaming [anybody], we have to learn lessons from this exercise... The main reason that health system reform didn't pass is simply the complexity of the nation's health care system, and the complexity of the solutions proposed." He said comprehensive reform is still an appropriate goal, but that incremental steps may be more "doable." He concluded, "The status quo is not appropriate." As for the future of reform, White House reports indicate a strategy for the new year is already in the works, but word on the streets is that the focus may shift to the state level.

MEDICAID SURGICAL FEES INCREASE, CONs AT ISSUE: The Department of Public Welfare has announced a significant increase in reimbursement levels for selected surgical procedures performed in a physician's office. The increases are retroactive to July 1, 1994. In some cases, fees will increase from under $50 to more than $300 for a procedure, representing the department's acknowledgment of physicians' argument that overhead costs must be taken into account. *Note, however, that a Certificate of Need (CON) from the Department of Health may be required to provide certain surgical procedures, but indications are that virtually no CONs are being issued.* For information, call the Society at (800) 228-7823 or (717) 558-7750, extension 483 (fee increases) or extension 457 (CONs).

SENATE PASSES LIMITED LIABILITY BILL: The state Senate in late September unanimously passed Senate Bill 1059 to provide protections for limited liability partnerships. Prior to reaching the Senate, the bill was amended in committee to include Society language to protect physician corporate practices. The bill now moves to the House for consideration.

IMPLEMENTATION OF FEDERAL VACCINE PROGRAM ON HOLD: The Pennsylvania Departments of Public Welfare and Health on October 1 began operating the new, federally funded Vaccines for Children program; however, cancellation of a New Jersey vaccine distribution center has put vaccine distribution to *newly enrolled physicians* on hold. The program seeks to raise childhood immunization levels in the U.S. by providing federally purchased vaccines—at no cost to participating providers—for children in certain groups. According to the Department of Health, any provider already receiving vaccines will continue to do so.

CLIA HOTLINE TERMINATED: The Health Care Financing Administration (HCFA) has terminated its Clinical Laboratory Improvements Act (CLIA) hotline—formerly (410) 290-5850—effective September 30, 1994. Physicians needing information regarding CLIA certification, fees, inspections, etc., should call the Pennsylvania Department of Health Bureau of Laboratories at (610) 363-8500.

KEPRO, DYNCORP JOIN FORCES FOR NEW HCFA CONTRACT: The Keystone Peer Review Organization (KePRO) has received a five-year, $33 million contract from HCFA to become the Clinical Data Abstraction Center for HCFA's Central Zone, which includes 24 states and territories. KePRO will work with DynCorp, a technical services organization in York, to abstract hospital medical records. Operations will begin in January.

HOUSE TO RECONSIDER UNIFICATION, SOCIETY FOCUS: The Society's House of Delegates, at its annual meeting this month in Hershey, will reconsider its unification status with the AMA in response to a county-proposed bylaws change. Also, the House will consider a series of recommendations from the Task Force to Enhance Physician Involvement which seek to prioritize Society initiatives based on identified membership needs and to improve communication between the grassroots membership and leaders. Seventy-three resolutions have been submitted to the House for consideration; complete coverage will be included in the December issue of PENNSYLVANIA MEDICINE.

SOUND PROTECTION

Princeton knows professional liability insurance.

And we know the disquieting reality. No matter how excellent your skills, you can still be drawn into a medical malpractice lawsuit.

We provide a strength that's instrumental to peace of mind. Just note our success rate over the last four years for cases in the courts: 95 percent were resolved in favor of our policyholders.

That's sound protection for doctors who choose Princeton.

Princeton. It's worth it!

Preserving Values: A Dying Craft?

John W. Mills, MD
Medical Editor

It has been observed that the recent interest in nutrition and health mania—along with a desire for "natural" products and "natural" ways of doing things, including recycling—stems from our hunger for purity and simplicity, and perhaps even more importantly, our longing for truth.

Equality and fairness could be easily added to our wish list, which really comes from our inner selves. Equality is guaranteed by our constitution; fairness is certainly intimated. Why do we long for the "self-evident" qualities in our daily life? Simply put, we are surrounded constantly by blatant dishonesty, manipulation, and hype beyond our control.

"It's no wonder we all seek some stability in our lives, some freedom from all the manipulation we constantly undergo via TV and radio."

Witness the tobacco companies. Hype plus! They have suppressed their own revealing studies and lied to us as well as to Congress. Research has proven the harmful effects of tobacco in any form, and as yet, regulation by our elected officials is a token attempt.

Money talks! The tobacco industry gave $2 million to members of Congress in the last election cycle, and now Phillip Morris is taking their cash to the people in California, where the company is sponsoring a "tobacco control" initiative on the smoking referendum on the November ballot. Instead of tough rules in force by many communities, there would be a weaker statewide standard *written* by Phillip Morris—all this according to Susan Estrich, a University of Southern California law professor.

Witness Congress. Several members presently are under indictment for criminal activity, most of it related to the House Post Office scandal. Congressman Dan Rostenkowski (D-IL), a most powerful representative who can still sway votes on health system reform, is accused of dishonesty and manipulation.

Looking closer to home, Charley Reese wrote an article, published in the *Punxsutawney Spirit*, on how to cure the American medical system. It was one of the most demeaning, vulgar essays I've ever read, suggesting that when a doctor loses a patient by death, the doctor should be killed in a similar manner. Even if it was written with tongue-in-cheek, it is totally unacceptable for publication—TRASH!

Then we have a physician and several employees of Care Mark in Minnesota indicted for fraud and abuse kickbacks in relation to sales of pharmaceuticals and durable medical equipment.

Consider, also, the chairman of the Congressional House Judiciary Committee, who is known for his disdain for tort reform.

All of the hype promoting RU486, the "morning after pill," should be carefully sifted through in light of the president of Hoechst's remarks when he said that RU486 would not have been developed if all of its side effects were known, according to Phyllis Zagano, an associate professor of communications at Boston University.

A note by a recent medical school graduate relates how the University of Virginia School of Medicine gave a "liberated" version of the Hippocratic Oath to the class to recite at graduation. A mockery, I'd say—just to be more politically correct!

It's no wonder we all seek some stability in our lives, some freedom from all the manipulation we constantly undergo via TV and radio—most of it spawned on "Madison Avenue."

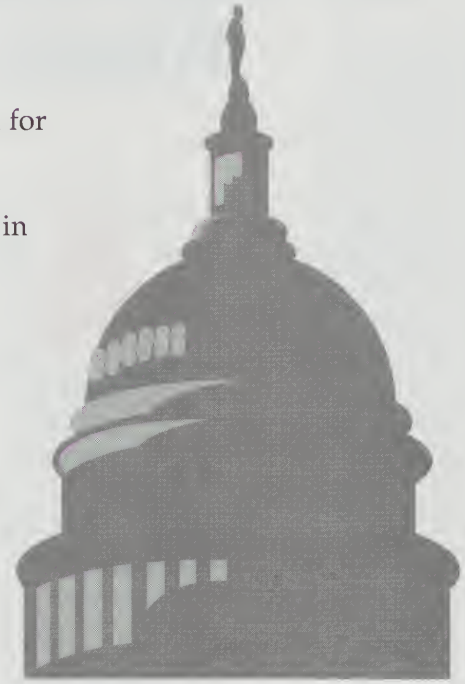
As we approach our annual State Society House of Delegates meeting, we should seriously try for less hype and manipulation, and for more truth and honesty as we deal one-on-one—as officers, trustees, and staff—with our members, and they with us.

Mutual respect and the "Golden Rule" need to be consciously mastered and fine tuned. A fine vineyard and its wines are tangible and authentic—they both age well and have lasting value. Let's try to simulate nature.

As Sir Richard Steele noted: "There is not a more useful man in the commonwealth than a good physician, and by consequence, no worthier a person than he that uses his skill with generosity and compassion." ⬡

PHYSICIANS FOR SANTORUM

Dear Colleague:



Please join us in supporting the campaign of Rick Santorum for United States Senator from Pennsylvania.

As a Congressman, Rick Santorum has included physicians in his decision-making process, and has demonstrated his support for medicine's viewpoints in legislative forums. Rick has sought and continues to seek the advice of practicing physicians on behalf of our patients.

This will be a watershed year for our political future. Physicians must be involved, and we must support candidates who understand our concerns on:

- the quality of medical care
- access to care
- patient choice and control
- the importance of education and research
- meaningful liability reform
- antitrust reform
- physicians' leadership in managing the economics of medical care

Rick Santorum needs your support. He needs your vote, and those of your family, friends, and colleagues. He needs your campaign contributions. Please call any of us listed below or the campaign office [1-800-FIGHT94] for more information on how Rick will represent physician and patient interests.

Please—support a candidate who supports our profession and our ability to care for our patients.

Physicians for Santorum for U.S. Senate *(all those listed are M.D.s or D.O.s):*

Giving Some Credit Where It's Due

Martin A. Murcek, MD

As I have traveled around Pennsylvania and neighboring states during my year as president of the Pennsylvania Medical Society, what has impressed me most is the big change in attitude among physicians since I began my term in 1993.

Last fall, everyone seemed resigned, but frustrated, about the prospect that Hillary and her "gang of 500" were about to bring us a real health care system crisis in the guise of "reform." Everyone I encountered felt that any changes wrought by the "Beltway crowd" would surely be changes for the worse.

In March of this year, a coalition of AMA leadership, 50 state medical society presidents, and other state society officers, converged on Washington, DC, in a show of strength. We heard from Senators Bob Dole (R-KS) and Phil Gramm (R-TX), and Representative Newt Gingrich (R-GA). Though no fans of "Clinton-care," they warned us that some sort of the legislation would be signed in the Rose Garden by mid-October, if only to allow Clinton to brag that he had delivered on a major campaign promise.

It is still possible that some sort of half-baked "health system reform" package might make it out of Congress and onto Clinton's desk, but Senator Dole said that prospect is "hanging by a thread."

There are many reasons for the big shift of opinion, but I believe the efforts of physicians to educate and motivate their patients to oppose haphazard "change for change's sake" was a big factor. Many of our patients contacted their legislators, and told them "Whatever you do, do it right, and don't do it in haste!"

I was appalled by the way groups like AARP sold themselves out. After meetings with AARP hierarchy, I felt that, despite the "company line," they were really committed to seeking rational, effective reform. When I realized that it was all double-talk, I felt that I had in some way let my patients and colleagues down.

It was heartening, however, to watch the AARP rank-and-file swing into action after the group's national leaders announced their support for the Gephardt plan: The AARP national headquarters switchboard was flooded by angry—and in some cases hostile—callers demanding that the support be withdrawn. Clinton's bunch and like-minded groups all got a real taste of "grassroots" politics at work. I'm sure many of them never expected it to happen like this.

> ***"...I believe the efforts of physicians to educate and motivate their patients...was a big factor."***

There are still too many physicians rushing to sign their careers away with some HMO or PPO because they are in fear of being left behind. PMSCO, the physicians' service organization of the Society formed in response to this unfortunate situation, has already entered contracts with seven physician groups; more are currently in negotiation.

While the threat of government meddling into quality American health care is on the wane, the rush to "managed care," being fostered by insurance companies, HMOs, and even hospitals battling for market share, is now our major concern.

The battle against socialized medicine will have to be fought again and again. Now, however, physicians have time to reason and reflect, calmly and deliberately, as our profession demands.

*A note from the president: Last month on this page, Pete Stark (D-CA) was mistakenly referred to as "the most physician-friendly member of Congress," instead of "the most physician-**un**friendly member..." as originally intended. We're still looking for the culprit who has befriended Mr. Stark.*

ou're on solid ground with the Dodson Plan.

More than 75 years ago, Bruce Dodson, Sr. pioneered the concept of the dividend plan for workers' compensation insurance. Dodson Group has been helping businesses like yours save on premium costs ever since.

The Dodson Plan gives you the opportunity to earn a dividend each year, depending on the claim experience of all insured members. We carefully select those who participate, creating the greatest potential for you to save.

Pennsylvania Medical Society endorsed the Dodson Plan in 1973. Since then, participating members have earned a total of **$2,309,240** in dividends. Share in the savings!

You're on solid ground with Dodson.

LETTERS TO THE EDITOR

"TALE OF A TOENAIL" EVOKES RESPONSE

I am writing this letter in response to a letter published in your June 1994 issue from Dr. Edward A. Lottick under the banner "Tale of a Toenail" [page 10]. I am the president of the Pennsylvania Podiatric Medical Association, and his letter was forwarded to my attention.

There are several ways to approach the issues raised in Dr. Lottick's letter, one of which would be to remain silent. However, I feel that since the author chose to address the letter to Mrs. Clinton, style it in the guise of a valid comment on health system reform, publish the letter in his own publication, and subsequently bring his own letter to your attention, with the statement that he had received "some very positive local commentary," remaining silent would only serve to perpetuate, or worse, validate the misleading facts and erroneous conclusions that are contained in the letter.

First, the author indicates that he saw a Medicare patient in his office who complained of a very painful toe. His initial recommendation was that his patient should go home and "soak it." This would indicate that the doctor had proceeded to a treatment plan prior to even finding out, from a cursory history and physical, that the patient had already been soaking her foot for two weeks.

This small omission pales in comparison to the realization that the doctor gave that advice while looking at a toe on which he ultimately performed a total nail avulsion, obviously without the knowledge that "soaking" will have no curative effect. (It may be interesting to know what the doctor would have charged had the patient accepted his first plan of treatment.)

Second, the author indicates that he billed $125.00 for the procedure that he performed, and he was paid $21.46. This would indicate that the doctor miscoded his bill. Assuming that the author's description of the procedure was correct, then the correct code would have yielded a remittance of $45.83 (a fact verified by the doctor's Blue Shield Medicare Carrier).

Third, the author admits that when he thought that the reimbursement rate for this procedure was the paltry sum of $21.46, he felt that the next case such as this that he saw was complicated enough to refer to a specialist.

It was only when Dr. Lottick "...subsequently learned..." that the specialist received $400.00 for the procedure that he performed, that this matter assumes the mantle of an issue that lies at the heart of health care reform, and should be brought to the attention of the wife of President Clinton and all the members of the state medical society. It should be noted that this was a surgical procedure done by a well-trained surgeon and is a procedure that a "general practitioner" is not trained or qualified to perform.

It is impossible to tell from the letter how the author learned what the specialist received for whatever services he performed, and that is not the import of my response to the doctor's letter. The point that should be understood, in connection with the cases that are described by the doctor, is that podiatric physicians do not receive any more for Medicare procedures than medical doctors or osteopathic physicians. We do, through shear repetitive experience, code procedures correctly and try to respond to all of the referrals that we receive from other physicians with quality care, so that the patient is comfortable with our services and grateful to the referring physician.

It is most difficult, however, to read a broadside such as the one that was published in your magazine. It is this type of infighting and prejudicial presentation, based on half truths and misunderstandings, that perpetuates rancor within the body of all health care providers, at a time that we should all be acting as a united body in the face of the challenge of health system reform.

Dr. Lottick obviously trusted a colleague enough to make the referral of a patient to him or her. It is my hope that the misunderstandings that generated the ire reflected in his letter could be examined and explained so that the continuity of referrals between competent professionals could continue to their mutual benefit, and, ultimately, to the benefit of the patient.

Neal Kramer, DPM, President
Pennsylvania Podiatric Medical Association

Author's Response:
Dear Editor: Thank you for the opportunity to respond to the letter from Dr. Kramer. The original letter was intended to illustrate how a mindless bureaucracy functions or actually doesn't function. Other than that, I did not intend to step on anyone's toes.

Edward A. Lottick, MD
Kingston

QUESTIONING THE FOURTH SCOPE OF WORK

Somehow I thought it would be different.

KePRO officials told us that the Fourth Scope of Work would change the peer review process. Clinical relevance would replace frivolous detail. Physician education would replace disciplinary action. Logical thought would replace bureaucratic mentality. Well, maybe I expected too much.

I recently received a "Notice of Final DRG Change" from the "new" KePRO. It seems my discharge diagnosis was unacceptable. KePRO reviewers insisted on changing my diagnosis of "respiratory failure due to chronic obstructive pulmonary disease" to "chronic obstructive pulmonary disease with respiratory failure." Just think of it—$13.5 million allocated annually by the Health Care Financing Administration to KePRO so it can rearrange words on a page.

Sometimes the more things change, the more they stay the same.

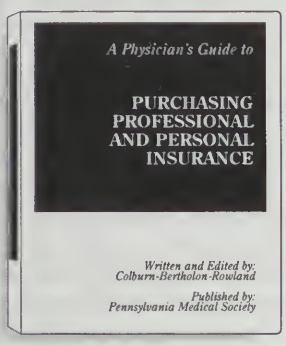
Philip D. Carey, MD
Carlisle

The editors of PENNSYLVANIA MEDICINE encourage comments about the magazine and its contents, as well as viewpoints on current medical issues. Remember—comments do not have to be negative! What has your county or State Society, or the AMA, done for you lately that you approve of? Please send letters to:

Managing Editor
PENNSYLVANIA MEDICINE
777 East Park Drive
P.O. Box 8820
Harrisburg, PA 17105-8820

Letters are published at the discretion of the editors and are subject to editing.

If you're looking for the right group practice coverage, why not ask the people who wrote the book on it?



When they needed to know about insuring you and your group practice, the Pennsylvania Medical Society didn't just want us to act as a guide.

They asked us to write it.

We're Colburn-Bertholon-Rowland (CBR). The endorsed broker for the Pennsylvania Medical Society. And while "A Physician's Guide to Purchasing Professional and Personal Insurance" isn't the catchiest title, if you're up against the complex issues of insuring a group practice, you'll want it on your bookshelf. It deals with everything from life insurance to disability coverage to professional liability insurance. Oh, and health coverage. Homeowner's insurance. Even long-term care. And there's a lot more to it.

Endorsed by the PA Med. Society

And with CBR, there's a lot behind it. We've spent the last 65 years giving doctors our expertise on all forms of insurance and group benefits.

When it comes to individual and group practice insurance, we're the people to call on.

If this sounds like the kind of help you can use, call us at 800-551-4504 (Media) or 800-327-1550 (Pittsburgh). Your CBR rep will do more than give you a hand. The first time you meet you'll receive our book – a $30 value – *free*. And if you want more answers, just ask.

Linking Up with MEDLINE®

Fred Baldwin

Pennsylvania physicians are joining the technology bandwagon, accessing medical databases from homes and offices equipped with personal computers and telephones. This article provides a brief introduction to these electronic libraries, focusing on one called MEDLINE®. A subsequent article will describe how to gain online (telephonic) access to these databases.

"We really couldn't figure out what was going on," says Richard Kleinert, MD, recalling a pediatrician's referral of a baby with multiple congenital problems, including near-blindness. "The two of us together did a real-time search, putting in all the different observations we'd made. It turns out that there were six other cases of this in the world. We were able to give the parents the option of seeing this other physician down at Johns Hopkins who had reported three of the other six cases. After calling, the parents decided that wasn't really necessary. The pediatrician here had made the correct diagnosis and knew how to treat their child. They didn't have to travel 500 miles to figure out what they should be doing."

Dr. Kleinert is an ophthalmologist on the staff of the Moshannon Valley Clinic, Geisinger Medical Group, Philipsburg, in western Pennsylvania. He's been doing online (telephonic) searches of medical computer databases for himself and his colleagues for nearly a decade. That makes him a veteran among an increasing number of physicians who are finding such searches to be easy, inexpensive, and, above all, useful.

"It's easier than flipping through a book, and you find a lot more on unusual topics," says Michael E. Kordek, MD, a staff physician at Geisinger's clinic in Dallas, with less than two years' experience in online searching. He can live with an occasional unsuccessful search, such as a recent one to determine whether patients who receive vaccines for hepatitis B may have protection against the disease even when tests show no antibodies. "At least you know you haven't overlooked something obvious."

Since the early 1970s, the National Library of Medicine (NLM), which is part of the National Institutes of Health, Bethesda, Maryland, has been developing a family of online databases collectively known as MEDLARS® (MEDical Literature Analysis and Retrieval System). Currently, MEDLARS contains more than 40 distinct databases, each a substantial library in its own right. Some have self-explanatory names like AIDSLINE® and CANCERLIT®. Others include DART® (Developmental and Reproductive Toxicology), which contains references on biological, chemical, and physical agents that may cause birth defects, and the recently added HSTAR® (Health Services Technology Assessment Research), which includes journal abstracts, technical papers, industry and trade publications, and newspaper articles.

The largest database within the MEDLARS system is MEDLINE, which might be thought of as a bigger, better, and more current version of the print reference, *Index Medicus*. MEDLINE contains well over seven million records from more than 3,800 international biomedical journals. If the original article included an abstract, it's in MEDLINE—true for about 70 percent of its current citations. MEDLINE also beats any conceivable print counterpart because it's updated weekly; over 30,000 new citations are added each month.

NLM reports that MEDLINE is searched approximately 20,000 times per day, increasingly by practicing physicians rather than academic researchers.

How useful are these databases, generally, to practicing physicians? Very useful, two recent studies suggest.

The June 23-30, 1993, issue of the *Journal of the American Medical Association* reported on a study involving 552 health professionals, over 70 percent of whom were MDs, who had used MEDLINE within the preceding year. In a series of 30-minute interviews, the researchers compiled information on 1,158 MED-

Mr. Baldwin, a contributing author from Carlisle, is currently co-authoring a book for Little, Brown & Co., with the working title, **Finding the Best Investment: A Consumer's Guide to Medical Information.**

LINE searches, 86 percent of which were reported as "effective."

The physicians interviewed reported several different uses for MEDLINE searches. The most important were: 1) identifying the most appropriate diagnostic test, 2) recognizing and properly diagnosing a medical problem or condition, 3) developing an appropriate treatment plan, and 4) actually implementing a treatment plan (e.g., identifying promising variations when the original treatment options were ineffective).

For example, one neurologist described a patient suspected of lupus, but with some atypical symptoms. A MEDLINE search to identify other vascular diseases led to a subsequent diagnosis of Sjogren's disease and a therapy of vigorous immunosuppression that would not otherwise have been used. Several physicians credited MEDLINE searches with enabling them to make life-saving decisions.

Asked why they used MEDLINE, the physicians said that textbooks could never be sufficiently current or specific to cover rare diseases, rare combinations of common diseases, or recent developments in diagnosis or therapy. Even those who had journals available found MEDLINE the fastest way to search for pertinent articles. Others cited MEDLINE's low cost (compared to journal subscriptions) and convenience. About half of those who did their own searching without relying on a librarian did so from their offices, over 40 percent searched from their homes, and fewer than 10 percent went to libraries.

A smaller study, more like a clinical trial than a survey, was conducted in Oregon during 1992-93. In this case, 48 searches were conducted by experienced medical librarians in Oregon on behalf of primary care physicians practicing in both urban and rural settings. After completing the searches, the librarians sent the physicians the full texts of selected articles.

For 58 percent of their questions, the physicians considered the information located to be "relevant." More significantly, 46 percent of the time they said they got a "clear answer" that almost as often "impacted patient care."

Although Drs. Kleinert and Kordek have access to the services of excellent medical librarians, they prefer to do their own searches, using a piece of software developed by NLM called GRATEFUL MED®. One reason, Dr. Kordek explains, is that searches involve some trial-and-error, and physicians can best judge for themselves how to narrow a search or switch search headings. Also, he adds, "I'm inquisitive and get satisfaction in finding an answer. Doing it myself may not be strictly necessary, but it's fun."

In fact, the librarians at the Geisinger Medical Center have actively encouraged physicians to learn to do their own searches and in 1990 and '91 sponsored, with NLM assistance, 68 demonstrations of the use of GRATEFUL MED throughout the largely rural area their clinics serve. They appeared before hospital staffs, county medical societies, and individual practices. Their report, recently published in the *Bulletin of Medical Libraries Association,* showed a significant increase in the number of physicians doing searches for themselves.

Nevertheless, most evidence suggests that Drs. Kleinert and Kordek are still in the vanguard—as few as 10 percent of practicing physicians use MEDLINE or related online information retrieval systems, according to some surveys. The main limitation of the MEDLARS databases is that they usually contain only abstracts and sometimes only citations. If you don't have easy access to a well-stocked medical library, you can order photocopies using a computer-based system known as LOANSOME DOC®, although this can be expensive.

What should physicians consider before trying to decide whether to connect to MEDLINE? "I think it's the only way to go," Dr. Kleinert concludes. "As the Nike commercial says, 'Just do it!' " ⬡

Editor's note: The next article in this series will include more information on GRATEFUL MED® and LOANSOME DOC ®.

UPMC Developing Teleradiology Network

The University of Pittsburgh Medical Center (UPMC) has received a $2.3 million contract from the National Library of Medicine to develop a teleradiology communications system, which will permit rapid transfer of high quality medical images for remote consultations.

Howard Yonas, MD, co-primary investigator in the contract, says the system "has the potential to improve short-term and long-term patient outcome, and have a positive impact on the cost of health care by avoiding unnecessary patient transfers and by expediting the necessary transfers."

Using specifically designed software—under development in collaboration with UPMC's Department of Radiology—and a telephone modem, physicians at six outlying hospitals in western Pennsylvania and Ohio will be able to quickly transmit high quality images of CT scans, X-rays, and MRIs. The images will be viewed by UPMC specialists—neurosurgeons, trauma surgeons, neurologists, radiologists, and critical care medicine physicians—on a high-resolution television screen.

Pennsylvania hospitals currently in the system include: Butler Memorial Hospital, Jameson Memorial Hospital in New Castle, and Latrobe Area Hospital.

Proud to be a Doctor

Maria T. Montesano
Assistant Managing Editor

John H. Hobart, MD, who will be inaugurated president of the State Society this month, talked with PENNSYLVANIA MEDICINE late this summer about the profession and its frustrations, reform, and the year to come.

Membership in organized medicine continues to be a point of contention among physicians nationwide. Some prefer not to belong, while others cite the "power in numbers" and available resources as reasons to belong. John H. Hobart, MD—who will be inaugurated as the State Society's 145th president on October 22—gives a very basic answer when asked why he believes in organized medicine: "I'm proud of being a doctor," he says.

Born in Montreal, Canada, Dr. Hobart is a naturalized U.S. citizen who wanted to be a doctor all along. "When I was 10 years old, I was going to be a neurosurgeon," he says, "but when I grew up I realized it wasn't for me." Instead, he chose urology, citing the "tremendous enthusiasm" and "marvelous teachings" of Cornelius Vermeulen, MD, whom he trained under at the University of Chicago Clinics.

"There aren't many times when medical students get up at 7:30 a.m. on Sunday to make rounds with someone," Dr. Hobart says, "but they would with Dr. Vermeulen. There is no question that it was his contagious enthusiasm for urology that hooked me into it."

Following his rotating internship at the clinics, Dr. Hobart worked as a fellow in the Harrison Department of Surgical Research, University of Pennsylvania. He then served as a captain in the U.S. Army Medical Corps for two years, before completing his residency at Columbia-Presbyterian Medical Center, New York, New York. He was certified in urology in 1964 and has practiced in the Easton area ever since. He and his wife, Joan, have five grown children.

Frustrating, yet satisfying

Being a physician is many things, according to Dr. Hobart: "Interesting, exciting, satisfying...." But he also admits some personal frustrations, mainly "the extraordinary noncompliance of so many patients—the diabetic who insists on weighing 300 pounds, the smoker whose coughing his or her lungs out, the drunkard whose liver is rapidly disappearing—the people who essentially won't look after themselves. Everywhere you turn, you find some different kind of nihilism in people's attitudes."

He says limited resources is a second frustration. "It's fine to say we have an indigent care program, but when you start trying to use the [Medical Assistance] program, it's full of cracks for patients to fall through." He calls the system "second rate"; and while he says the two frustra-

JOHN H. HOBART, MD
145TH STATE SOCIETY PRESIDENT

BORN: October 20, 1929

MEDICAL SCHOOL: College of Physicians and Surgeons, Columbia University, New York

SPECIALTY: Urology

CURRENT POSITIONS: Director of surgery and attending urologist, Easton Hospital; clinical assistant professor, Hahnemann University, Philadelphia

STATE SOCIETY SERVICE HIGHLIGHTS: Former chairman/former secretary, Board of Trustees; delegate, State Society House of Delegates; director and vice chairman of the board, Pennsylvania Medical Society Liability Insurance Company

tions "may well go together," he stresses that "noncompliance is not limited to the indigent population."

These frustrations are also prominent in his discussion of health system reform. "The comment I've heard repeatedly from my non-medical friends is, 'I would like to see the indigent receive care...the needy looked after,' " Dr. Hobart says. But that same group is not particularly anxious to give up anything. "We have a pretty good system right now. Let's not mess up the 85 percent that are doing pretty well to address the other 15 percent, especially when so many of the rest have *chosen* different lifestyles—lifestyles of 'I don't insure my health, I don't insure my car,' etc."

Instead, he advocates instituting portions of health system reform, such as medical liability reform and antitrust relief, but acknowledges that the system is far from perfect. He stresses that physicians—and more importantly, the federation of medicine—need to take the lead in such reform.

At bat for patients

Dr. Hobart joined his county society, the State Society, and the AMA in 1962, and though he has been active throughout the years as a member of several committees and task forces, he says he never really thought about being president. Instead, he sought to serve his peers as a district trustee, a role he assumed in 1983 and held until last year. He has also served as secretary of the State Society and chairman of the board for three years—a position he says allows one to be the best trustee that he or she can be.

He has also been instrumental in the workings of the Pennsylvania Medical Society Liability Insurance Company (PMSLIC) since its inception in 1978. He has been a director for 16 years and also serves as vice chairman of the board, chairman of the Claims Committee, and a member of the Executive and Finance committees.

"My experiences at PMSLIC have been most rewarding," he says, "because basically we have been able to do a good job doing what we started out to do: Providing physician-oriented professional liability insurance at reasonable rates." Dr. Hobart also credits his PMSLIC experiences as having taught him "a lot more" about medicine. "I've also become far more conversant with the function of the Society and it's organization"—knowledge that is sure to come in handy to him as president.

His pursuit of the presidency, then, was the result of suggestions from his friends and colleagues, he says, and since he "had nothing but very positive feelings" about the organization and his peers, he admits it didn't take a lot of arm twisting to get him to run.

Dr. Hobart believes bettering the health and well-being of the profession and its patients is the Society's main challenge, and the key to doing that well, he says, is two-way communication: "The Society communicating to members, *as well as* the members communicating to the Society!"

But that can be "awfully hard," he admits honestly. "We've had a number of major victories in the last several months through the efforts of the State Society. I believe the average member is not fully aware of them, much less the nonmember physicians who will benefit from them just as much as the members whose dues, sweat, and blood have gone into the accomplishment."

"I was talking earlier about noncompliance and unrealistic patients, but," he adds, "you also must address the issue of the unrealistic physician in terms of what he or she is going to have to *do* to be successful in the profession."

"I'm proud of being a doctor," Dr. Hobart continues. "My little niche of the system has many flaws in it; everyone's does. But if we don't have an organization to represent our combined interests...the profession is not going to thrive, [and] if, through my involvement in the Society, I can help make my profession a better one, or make it a profession that is more useful to the people, I'm delighted."

Taking the lead

As president, Dr. Hobart says he is most looking forward to meeting more of his colleagues. "I know a lot of physicians in Pennsylvania, and I'm looking forward to the opportunity to get to know even more and to visit some of our colleagues in neighboring states."

He will be inaugurated, in what he describes as "a low-key ceremony," at the end of the House session on October 22 in Hershey. Though he didn't offer any insights into his inaugural remarks, Dr. Hobart did give the following charge to physicians:

"These are times of change, and medicine continues to be under challenges, threats, and pressures which it had not been in the past. It's a time for all of us to acknowledge our strengths as well as our weaknesses and present a unified front to help our patients. No one cares about a sick person any more, except perhaps the family and hopefully the physician...Someone has to be supportive of our patients, and someone has to be supportive of our profession. If it's not us, who is it going to be?" ⬡

"I believe the average member is not fully aware of [recent Society victories], much less the nonmember physicians who will benefit from them just as much as the members whose dues, sweat, and blood have gone into the accomplishment."

—John H. Hobart, MD

End-of-Life Decision Making and Developing International Law

Leo Uzych, JD, MPH

Physicians may increasingly find themselves enmeshed in the web of controversy associated with the propriety of discontinuing treatment, particularly when the treatment may provide no discernible therapeutic benefit to an incompetent patient. A look at international thinking on this issue offers other perspectives.

More than 80 percent of Americans 65 or older die in hospitals or nursing homes, and an estimated 70 percent of these persons die after a decision to forgo life-sustaining medical treatment has been reached.[1] Although the thorny issues arising from end-of-life treatment decisions may be medical, ethical, and moral in nature, they are also fettered by indissoluble bonds to the legal realm.

Over the past 20 years, a body of pertinent case law has grown in the U.S., spawned originally by the landmark case in 1976 involving Karen Quinlan and reaching, more recently, to the 1990 Supreme Court case of *Cruzan v. Director, Missouri Department of Health.* Continued, rapid advances in medical technology, however, have contributed to a blurring of any lines of sharp demarcation separating affected concerns, including the principle of the sanctity of life, the principle of self-determination, and the patient's right to privacy and autonomy. And underlying, unresolved issues may seek refuge in courtrooms and legislatures.

Physicians charged with treating incompetent patients at the end of life may unwittingly find themselves crossing the Rubicon and entering the terrain of treatment decisions arguably violative of extant laws.

Courts in some of the commonwealth nations have recently adjudicated cases pertaining to the treatment of incompetent patients. It may be instructive for concerned Americans to open their eyes to see how other common law nations have sought to resolve contentious issues affecting the end-of-life treatment of the incompetent patient.

Mr. Uzych is an attorney, specializing in health law, based in Wallingford.

New Zealand

A case decided recently by the New Zealand High Court, titled *Auckland Area Health Board v. Attorney General,*[2] shines light in the area of the incompetent patient's right to die. This case, in which the court ultimately ordered the withdrawal of artificial ventilatory support from a patient suffering severely from Guillain-Barre syndrome, represents the first instance in which a court in New Zealand was directly confronted with the contentious issue of the "right to die" of an incompetent patient.

As described in the court's decision, the patient—identified simply as "Mr. L"—was not "brain dead," albeit denervated and in a "locked in" and "locked out" state, and, therefore, "completely dependent" on artificial ventilatory support. The prognosis was "hopeless." Discontinuation of artificial ventilation would result in immediate cardiac arrest and the quick, painless death of Mr. L; with the ventilatory support, he could survive indefinitely.

The treating physicians, with the "full support" of Mrs. L, wished to withdraw the ventilatory support, given the determination that the patient's condition would not improve and the belief that there was no therapeutic or medical benefit in continuing the artificial ventilation. The physicians, however, were fearful of acting on their decision, because of acute concern over the possibility of prosecution for murder or manslaughter, pursuant to the strictures of a New Zealand law, called the Crimes Act 1961. Therefore, they sought a declaration from the court stating that what they wished to do was not unlawful.

The provision of the foregoing law essentially imposes a "legal duty" on a physician to extend the "necessaries of life" to dependent patients under their care, and further imposes criminal re-

sponsibility upon a doctor for omitting, without "lawful excuses," to honor such duty, if the omission causes harm to the patient. The judge's decision states that the provision of artificial respiration may be regarded as a "necessary of life" if required to "prevent, cure, or alleviate" a disease endangering the patient's health. If the patient is surviving only by virtue of mechanical means and is "beyond recovery," however, then the use of a ventilator cannot properly be construed as a necessary of life.

Given extant circumstances in Mr. L's case, a life support system serves "no purpose" and cannot properly be regarded as a necessary of life. Further, even if the treating physicians had a legal duty to provide ventilatory support to Mr. L as a necessary of life, it would not be unlawful to discontinue the artificial ventilation if the discontinuance accorded with "good medical practice."

As envisioned by the judge, this generic term encompasses: the doctor's bona fide intent to serve the patient's "best interests"; attachment to "prevailing medical standards"; consultation with the medical profession's "recognized ethical body"; and concurrence of the patient's family. The judge opined that in Mr. L's case, there was assurance of "good medical practice."

The judge's formulation of the contours of good medical practice is well conceived, as far as it travels. But some commentators may look askance at the design because it is oddly bereft of overt mention of the wishes of the affected patient.[3-4] As perceived by the New Zealand judge, what is involved is medical treatment in accordance with the "doctor's best judgment" as to what is in the best interests of the patient. Yet, particularly in a matter involving literally life and death, wouldn't it be wise and eminently desirable to garner, or attempt at least to garner, the wishes of the patient whose life will end if life support is withdrawn?

The lack of meticulous attention to patient self-determination, revealed by the New Zealand decision, is strikingly at variance with the body of pertinent case law which has developed in America.[5]

England

Other commonwealth courts, as well, have recently had occasion to address vexing issues associated with the withdrawal of care from incompetent patients.

In England, the House of Lords, the highest court in the country's legal system, recently broached this area, in a case titled *Airedale NHS Trust v. Bland.*[6] The so-called law lords considered the legality of withdrawing artificial hydration and nutrition in the case of a young man, named Anthony Bland, suffering from a condition known as a persistent vegetative state (PVS). Their lordships approved allowing physicians to withdraw artificial feedings, and the patient succumbed a few days after the equipment was withdrawn. This case marks the first time an English court has focused attention pointedly on the question of particular circumstances, if any, which may empower a physician to lawfully discontinue life-sustaining equipment, including nutrition and hydration.

"The lack of meticulous attention to patient self-determination, revealed by the New Zealand decision, is strikingly at variance with the body of pertinent case law which has developed in America."

The patient was injured in a disaster occurring at a football ground, suffering a severe crushed chest injury, giving vent to hypoxia brain damage. Although the brain stem of the patient was intact, prolonged oxygen deprivation had caused irreparable damage to the cerebral cortex. No hope of recovery or improvement in the patient's condition was maintained by his doctors. The patient had not, before the disaster, provided any indication of his wishes if he should ever find himself in such a condition.

Armed with the support of the patient's family and doctors, the authority responsible for the hospital where the patient was being treated sought declarations regarding his future medical care, including a →

declaration empowering them to lawfully discontinue all life-sustaining treatment and support measures intended to keep the patient alive in his PVS, encompassing the termination of ventilation, nutrition, and hydration by artificial means.

Because Anthony Bland was incapable of taking any steps in the court proceedings, the official solicitor of the supreme court was appointed to act as his guardian ad item. This mechanism allowed the rights of the insensate patient to be argued as the case winded its way through the various stages of appeal, coming to rest, finally, in the House of Lords, where their lordships dismissed an appeal of an earlier grant of the declarations sought. In this respect, at least, the English case can be contrasted with the New Zealand case, where no one really spoke for Mr. L or argued for his rights.[7]

The pivotal legal issue identified by their lordships related to the legal duty of the doctor.[8] The law lords categorized the withdrawal of hydration and nutrition as an "omission," to provide care, rather than as an act, and then moved on to consider whether the doctors' conduct, albeit an omission, constituted a breach of their duty to the patient. The law lords, in the latter vein, opined that the doctors were under a duty to act in the patient's "best interests." If continued treatment was not in the "best interests" of Anthony Bland, then their conduct would not represent a breach of duty. Given the permanently insensate condition of the patient, the law lords concluded that Bland could not benefit from continued treatment.

Although the law lords sought to clarify the state of the law affecting the care of a PVS patient, issues and uncertainty persist concerning the withdrawal of care from patients who are incompetent, albeit not in a PVS. The line of demarcation between patients who are insensate and those who are not is also not clear.

How would an English court, for example, perceive Mr. L? On the one hand, he is arguably not insensate to the extent that his higher brain can still function; on the other hand, in light of his "locked in" and "locked out" status, he arguably could be described as insensate.

Thoughts for the future

In America, rather profuse legislation has been crafted, enabling competent persons to pen so-called "advance directives," intended broadly to structure end-of-life decisions, and medical care generally, if the maker should subsequently become incompetent and fall ill. Virtually all of the states now have laws authorizing proxy directives, such as durable powers-of-attorney for health care, and instructional directives, such as living wills.

There is, however, a paucity of data concerning the actual efficacy of advance directives. As medical technology continues its rapid, inexorable march, the chasm between "old law" and "new medicine" will likely widen. Attendant issues, with roots extending to medicine, as well as law, ethics, and social policy, will have to be fleshed out. Ultimately, wisely crafted reform measures, affecting care of the incompetent patient, will come to pass only if the widely divergent views in this issue-laden area are sifted through the strainer of professional and public debate.

Editor's Note: At press time, the State Society's Board of Trustees had approved publication of a "Physician Living Will Information Kit" developed by the Society's Commission on Bioethics. The kit is to include professional viewpoints concerning malpractice issues, guidelines, terminology, and other resources. More information on availability of the kit will be published in upcoming issues.

Living Will Brochures Available

See page 19 for information about ordering a brochure for patients, *Dignity in Life, Dignity in Death,* developed by your State Society.

Dignity in Life Dignity in Death

Living Will Brochure Bonus

The Society's Communications and Public Affairs Division continues to make the "Dignity in Life, Dignity in Death" living will brochure available for members to distribute to their patients. As a member, you are entitled to 100 free copies of the brochure, and additional quantities are available at a modest cost. For a limited time, an additional 25 copies are offered as a bonus. If you have not yet ordered your free brochures, you may request 125 at no cost. If you have received your free supply, you are entitled to an additional 25 at no cost.

How to Order

Physicians may order brochures by using the order form below. For information, call the Pennsylvania Medical Society Division of Communications and Public Affairs at (717) 558-7750 or (800) 228-7823.

Member Name _____

Agency/Organization _____

Address _____

Physicians May Be Vulnerable To Silent PPOs

Michael L. Ile, JD

The AMA is urging its members to take the lead in eliminating a new insurance industry practice which is not only illegal, but is also costing physicians and hospitals an enormous amount of money each year.

The American Medical Association (AMA) has uncovered a widespread practice in the insurance industry that has cost physicians and hospitals hundreds of thousands, perhaps millions, of dollars. Any doctor or hospital signing a preferred provider organization (PPO) contract is vulnerable to this "silent PPO" scheme, in which insurance companies use brokers to avail themselves of PPO discounts to which they are not entitled. Vigilance on the part of providers is essential to eliminate this practice.

Background

Normally, a PPO contract reflects a straightforward exchange of bargains. The provider agrees to accept discounted fees in order to be designated a "preferred provider" by the insurance plan. Beneficiaries who choose a PPO plan are given substantial financial incentives to select preferred providers, and they usually receive a directory to help them do so. The PPO may pay 90 percent of the bill of a preferred provider, but only 70 percent of the bill if a beneficiary selects a non-plan provider. By comparison, traditional indemnity plans typically pay 80 percent of a provider's bill.

The financial incentives of PPOs are necessary to attract beneficiaries to a plan that will restrict, even to a relatively minor degree, their choice of providers. In fact, PPOs often serve as transitional vehicles for patients unaccustomed to managed care plans. Providers are motivated to join PPOs because they expect the PPOs' financial incentives and directories to steer more patients to them. There are currently over 650 corporate PPOs operating in the United States.

Mr. Ile is the AMA's health law division counsel.

How silent PPOs work

Given the fundamental nature of legitimate PPOs, the term "silent PPO" seems oxymoronic. How can providers be "preferred" if their identity is secret? The answer is that silent PPOs are not PPOs at all. They are a mechanism through which insurance companies make misrepresentations and take discounts to which they are not entitled. This happens thousands of times each day.

Here's how it works. (The example involves a hospital, but physicians are vulnerable in precisely the same way.) Suppose that Fred is enrolled in an insurance company indemnity plan. Fred has chosen the indemnity plan, with its higher premiums, because he wants no restriction on the physicians or hospitals he may use. Fred becomes ill and is hospitalized. When Fred is admitted, Hospital A calls the insurance company and verifies that Fred is covered by an indemnity plan that pays 80 percent of Fred's bills up to $5,000, and 100 percent above that amount. After Fred is released, Hospital A sends a bill to Fred's insurance company and, as Fred is in an indemnity plan, bills at full price with no discount.

The insurance company would rather not pay full price to Hospital A. It therefore calls a broker who has access to the list of providers and discount levels for several legitimate PPOs. (How the broker acquired this information is discussed below.) The broker searches its rosters and discovers that Hospital A has signed a contract with PPO X that calls for a 25 percent discount. The broker sends a fax to the insurance company with this information.

The insurance company then recalculates Hospital A's bill for Fred, taking 25 percent off the original bill. The new bill, called an Explanation of Benefits (EOB) form, will have a notation specifically referring to the PPO X discount as the reason for the lower price. Upon receiving this document, the accounting department at Hospital A verifies that the hospital has a current contract with PPO X.

Unless the hospital searches Fred's admission records, such as the photocopy of his insurance card, it will be unaware that Fred is not a member of PPO X (or any other PPO for that matter). The hospital will grant a discount that it is not contractually bound to give, in effect extending to the insurance company the discount that it negotiated with PPO X. That discount was intended to apply to a defined group of beneficiaries: the enrollees in PPO X.

Hospital A could prevent the silent PPO from operating by comparing the insurance company EOB with its verification of Fred's coverage. However, the administrative costs of manually checking every claim are prohibitive. Not all providers, especially physicians, have the information management systems needed to cross check records efficiently. That is no longer true. As discussed below, providers must change their way of doing business with insurers.

Why would PPO X permit the insurance company and broker to use its roster of providers? Money. The insurance company pays the broker 30 percent of the amount "saved" on Fred's bill for providing the information on PPO X. The broker splits its fee with PPO X for the use of its roster of providers. The transaction is simple. All that is required is two telephone calls or faxes. Costs are near zero, and the savings can be huge: 20 percent to 30 percent or more of a multi-thousand dollar bill. But because the transaction costs are so low, this process can be, and is, used for relatively small claims. With very little effort, PPOs and brokers can make substantial profits by completing a high volume of transactions.

Numerically, the example above would look like this:

INDEMNITY	SILENT PPO
Total bill $5,000	Total bill $5,000
Insurer pays hospital $4,000	Insurer pays hospital $3,000
	Insurer pays broker $300
Fred pays $1,000	Fred pays $1,000
Hospital gets $5,000	Hospital gets $4,000
	Broker gets $150
	PPO X gets $150

Does this silent PPO benefit the patient? No. Fred is billed for 20 percent of the original bill by Hospital A, just as his indemnity plan provides. Unless Hospital A discovers the insurance company misrepresentation and rejects its attempt to take a discount, the insurance company will pay less than the 80 percent of the total bill that it bargained with Fred to pay.

Meanwhile, the insurance company will not share its "savings" with Fred. Fred is paying indemnity plan premiums and not getting the benefits he bargained for. The PPO is "silent" because Fred doesn't know that he's in one. And he's not.

Does the silent PPO benefit Hospital A? No. Hospital A agreed to discount its prices to PPO X in exchange for its designation as a preferred provider. That agreement had no effect on Fred's decision to select Hospital A. Fred had no financial incentive to go to Hospital A, because Fred is not a member of PPO X. He has paid for indemnity coverage which allows him to select any hospital. He is under no financial incentives at all, and he has never seen a directory of preferred providers for PPO X. He chose Hospital A for personal, not economic, reasons.

By selling information about Hospital A's discount to Fred's insurance company, PPO X is striking at the heart of the bargain it reached with Hospital A. Hospital A offered the discount in exchange for a promise—that a defined group of patients (the members of PPO X) would be encouraged to use Hospital A.

Fred is neither a member of that group nor encouraged by PPO X in any way to use Hospital A. Nevertheless, the insurance company may succeed in gaining access to this discount by falsely stating (or implying) that Fred is a member of PPO X. After all, the insurance company is entitled to a discount under Hospital A's contract with PPO X only if Fred is a member of PPO X.

Who does the silent PPO benefit? The insurance company, the broker, and PPO X. To be sure, the insurance industry claims that providers are well aware of silent—or non-directed—PPOs, and that PPO contracts with providers generally permit the sale of discounts to other payers. The AMA has a different view.

"Who does the silent PPO benefit? The insurance company, the broker, and PPO X."

Recommendations

Silent PPOs are very common. Silent PPO brokers' marketing materials set forth quite clearly how they operate. This is a →

widespread practice in the insurance industry, and providers must take steps to protect themselves from the loss of income to which they are entitled.

The silent PPO approach is applied not only with indemnity patients, but also with patients who are members of a legitimate PPO but use a non-preferred provider. In fact, any situation in which an insurance company is facing the prospect of paying a non-discounted claim is ripe for silent PPO treatment. Thus, every physician and hospital with a PPO contract should:

1) Review the terms of each contract to assure that the PPO is not permitted to sell the discount to other plans, and to verify that the PPO is obligated to use financial incentives, directories, and the like to steer patients to preferred providers. Do not sign a contract that permits silent PPOs to use your discount unless you are prepared to discount all of your business.

2) Audit your files to assure that the discounts you have given are appropriate. Reject any attempt to secure a discount for a patient who is not a member of a PPO with whom you have contracted. Compare the representation on the insurance company EOB form with the information you received in verifying coverage at the time of initial treatment of the patient.

You can also call the insurance company to verify the terms of the patient's coverage after you receive an EOB that does not conform to information previously supplied by the patient, for example, where the patient's insurance card makes no mention of a PPO but the EOB indicates a PPO discount. The insurance company telephone clerks will be amazingly forthright about the terms of the patient's coverage.

Do not assume that the insurance company is entitled to every discount it seeks.

3) Institute a mechanism to identify patients who are entitled to a discount, so that claims which incorporate an inappropriate discount are flagged. Silent PPOs are successful because providers trust the representations made by insurers. You may no longer safely do so.

The AMA believes silent PPOs constitute fraud on the provider community, and we have brought this matter to the attention of law enforcement agencies. At the same time, providers must take the initiative and protect themselves from this practice. ✪

This program has been reviewed and is acceptable for 3.75 Prescribed hours by the American Academy of Family Physicians.

This program is supported in part through an educational grant from Du Pont Pharma and Merck U.S. Human Health.

DOCTORS APPEAL EXCLUSION FROM PREMIERBLUE

Approximately 2,000 physicians have appealed Pennsylvania Blue Shield's decision to exclude them from PremierBlue, the company's new insurance network developed to replace its traditional participating doctor (par-doctor) network.

Selective contracting of physicians is one of the predominant differences between the two networks. PremierBlue selectively contracts according to criteria overviewed in "Special Update: PremierBlue," a supplement to PENNSYLVANIA MEDICINE published by the State Society in September 1993—just prior to program implementation. To date, approximately 10 percent of all health care professionals—including physicians and non-physician providers—who have applied for PremierBlue membership have been denied, according to Blue Shield.

Reasons given for denial include:

- lack of board certification/ insufficient continuing medical education (CME) credits submitted (37 percent);
- lack of board certification/no CME credits submitted (20 percent);
- unacceptable historical practice pattern (12 percent);
- lack of appropriate malpractice coverage/unacceptable malpractice history (9 percent);
- lack of hospital privileges (8 percent);
- lack of Pennsylvania license (1 percent); and
- other (13 percent).

The Society encourages deferred applicants to use the appeals process, also outlined in the September 1993 supplement. The Blue Shield Enabling Act requires that initial appeals be made to Blue Shield, before physicians can take their cases to the state or the courts.

Members with questions about PremierBlue can call the Society's Reimbursement Resource Program at (800) 228-7823.

PROPOSED HCFA RULE WOULD REFINE GPCIs

The State Society in August commented on a Proposed Rule issued by the Health Care Financing Administration (HCFA) that would refine the geographic practice cost indices (GPCIs), change relative value units, and revise a number of payment policies for specific physician services.

Analysis finds faults

In an analysis, the AMA says that while HCFA proposes to allow separate payment for care plan oversight services, the proposed coverage policy is very restrictive and rejects the new CPT codes adopted for these services, as well as the work relative value recommendations developed by the AMA/Specialty Society RVS Update Committee.

Coverage would be extended only to services provided to patients receiving Medicare-covered home health care services. Further, HCFA would not recognize care plan oversight as a new service and would reduce relative values across all physician services to meet budget-neutral requirements.

In revising the GPCIs, HCFA proposes to use data from the 1990 census on earnings and expanded professional liability data, but would continue to use Housing and Urban Development (HUD) fair market rental data for residential rents as a proxy for physician office rents. The AMA notes that most of the changes under the new GPCIs would be "quite small" and would be phased in over two years.

Other proposed changes include:

- revising payment for multiple surgeries by increasing—from 25 percent to 50 percent—the standard percentage for the third through fifth procedures,
- extending the site-of-service differential to an additional 230 procedures, and
- including payment for antigens prepared by physicians under the payment schedule.

Society responds to HCFA

In a letter to HCFA, State Society President Martin A. Murcek, MD, suggested that HCFA:

1) refine the GPCIs by replacing "proxy" data with current data on physicians' actual costs;

2) accept the recommendations of the AMA/Specialty Society RVS Update Committee for the work relative value units for carrier-priced and non-Medicare codes; and

3) strengthen the proposed payment policy on care plan oversight by implementing the policy with the two existing CPT care plan oversight codes, applying the policy to all sites and circumstances covered by the CPT codes, valuing these services according to the RVS committee's recommendations, and not applying budget neutrality constraints to these new services.

A summary of *all* comments received by HCFA is expected to be published in a future edition of the *Federal Register.* Look for updates on this issue in future Society publications.

BUREAU ISSUES NEW DISABILITY FEE SCHEDULE

The Bureau of Disability Determination, Department of Labor and Industry, has announced implementation of a new fee schedule, effective May 9, 1994.

The fee schedule reflects a number of increases for physicians, including an increase in reimbursement from $75 to $100 for the various specialty disability examinations. The department had previously increased from $15 to $25 the fee paid to complete requests for medical records.

These announced fee increases are the result of numerous Pennsylvania Medical Society interactions with the bureau, as well as the development of a set of "principles" regarding services to be reimbursed by the bureau.

For further information, or to receive a copy of the latest fee schedule, please call the Society's Department of Medical Economics at (800) 228-7823 or (717) 558-7750.

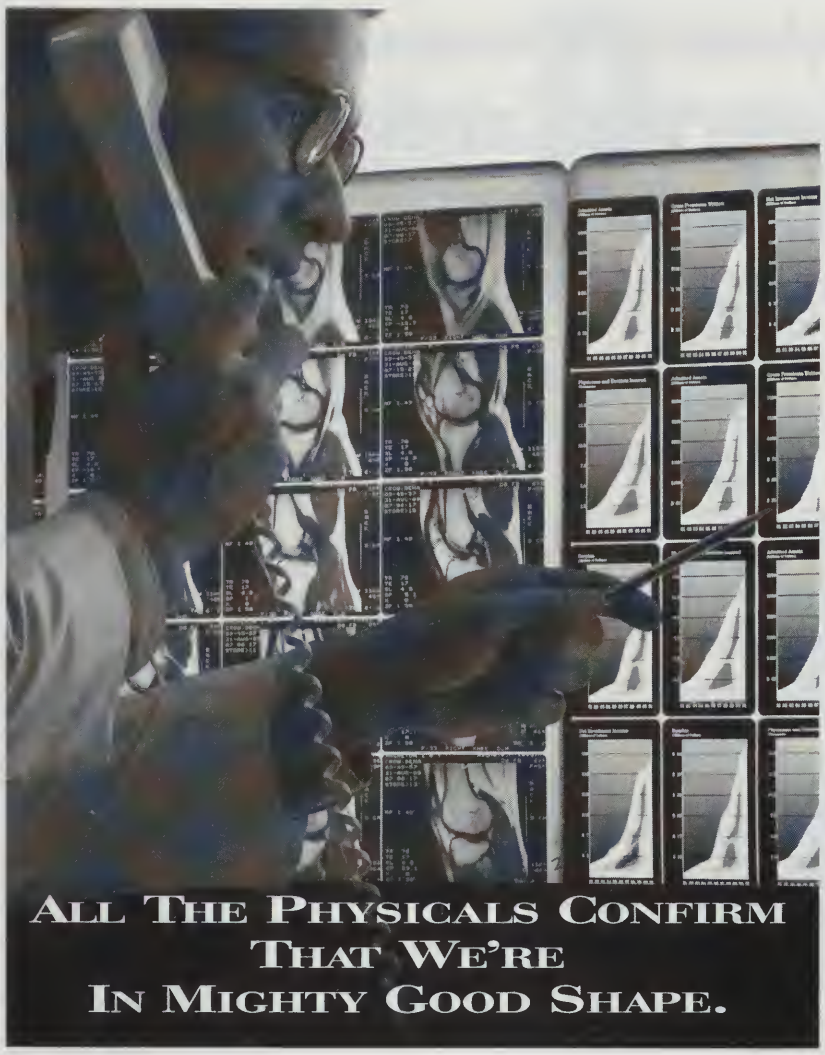
MEDICARE PROGRAM CHANGING NAME

Pennsylvania Blue Shield has announced that as of January 1, 1995, its Medicare Part B program will begin operating under a new name—**Xact Medicare Services.**

The change is being made to reduce confusion for out-of-state beneficiaries and health care professionals who have mistaken their local Blue Cross and Blue Shield plan for the plan that administers their Medicare benefits.

Customer service numbers will remain the same:

- For recipients, (800) 382-1274.
- For health care professionals, (717) 763-5700.



ALL THE PHYSICALS CONFIRM THAT WE'RE IN MIGHTY GOOD SHAPE.

Examine our performance and you'll agree. Membership was up again last year, passing 17,000. Total premiums written surpassed $165 million. Policyholders' surplus in excess of $50 million. Healthy numbers, confirmed by insurance auditors, and an A.M. Best Rating of B+(Very Good). We have a strong financial position, increasing market share and competitive pricing. Pennsylvania's Gubernatorial Race:

Where the Candidates Stand on Health Care

At first glance, gubernatorial candidates Tom Ridge (R) and Mark Singel (D) appear to be true to their party lines on several issues under debate prior to the November election—and health care is no exception.

Ridge, the Republican candidate from Erie, is a veteran who is serving his fifth term in Congress. He has focused his campaign on bolstering business in the commonwealth and on making Pennsylvania "job friendly." His stance on health care reflects that focus.

"Pennsylvania is the solution in health care, not the problem, with some of the finest quality health care in the world," begins Ridge's one-pager on health care. "We have world class medical and research facilities, pioneering pharmaceutical and biotechnology companies, and hundreds of health care-related industries providing over 550,000 Pennsylvanians with good, steady jobs. In addition, more than 92 percent of our citizens already have some type of health coverage."

Ridge says we must "fix what is wrong with the system, while preserving what is right." He supports:

- making health care coverage universally accessible, portable, and more affordable;
- market-based reforms that provide consumer accountability and individual choice, while avoiding health care rationing, decreased innovation, and reduced quality;
- increased use of primary care;
- eliminating discrimination against individuals with pre-existing conditions; and
- administrative simplification that will reduce the vast amount of paperwork with which hospitals and health care providers now struggle.

Ridge adds that he opposes increased government bureaucracy and excessive government regulation, as well as mandates on employers to provide health care coverage to their employees. He concludes that the latter would destroy jobs, hurt small businesses, and harm the economy.

Singel's plan

Singel, the Democratic candidate originally from Johnstown, is serving his second term as lieutenant governor and is a former state senator. His "Ready Right Now" campaign focuses on the experience he gained during his six months as acting governor, while Governor Casey was on medical leave last year.

Singel supports the Pennsylvania Health Care Security Act, proposed by Governor Casey earlier this year. "The one principle that must be part of any health care reform is universal, guaranteed, private health care coverage," Singel says in a 12-page plan, "Guaranteeing Health Security," which he wrote at the beginning of his campaign.

But he also believes reform must go beyond universal coverage, and control health care costs and ensure access to care. He says that if elected governor, he would "implement the programs and initiatives needed to revive and rehabilitate Pennsylvania's health care system."

More specifically, Singel supports:

- a Health Insurance Bill of Rights that includes consumer safeguards—for example, ending denials because of pre-existing conditions and providing portability;
- a Managed Care Bill of Rights to preserve the right to receive medically necessary care from managed care organizations;
- mandatory arbitration of malpractice claims;
- banning self-referrals; and
- providing consumers with medical service cost and performance information.

He also would seek to promote appropriate and affordable long-term health care for older Pennsylvanians, guarantee access to primary care practitioners and services, and provide prenatal care to all pregnant women.

Editor's note: Due to the closeness of the election to this publication's press time, we chose only to review the platforms of the two major candidates.

SOCIETY OPINION PUBLISHED IN NEWSPAPERS STATEWIDE

The Society attracted media attention statewide as the result of an op-ed article by State Society President Martin A. Murcek, MD.

In the editorial, published by more than a dozen Pennsylvania newspapers, Dr. Murcek overviewed the Society's position on health system reform. "The Pennsylvania Medical Society believes strongly that any reform plan should result in all Americans having health care coverage," he wrote. "We want to guarantee that the quality of care under any reform plan will be at least as high as it is today. And we believe that the medical profession, not the government, is best suited to protecting and improving quality."

Also, he stressed the need for patients' freedom of choice, insurance reforms, administrative relief, professional liability reform, and antitrust relief in any health system reform legislation.

Dr. Murcek concluded, "Each physician has his or her own viewpoints about reform. But I speak with confidence when I say the greatest concern of each and every physician is that whatever reform plan is adopted, that our patients come out ahead of where they are now...And for heaven's sake, let's not fix what isn't broken."

State Society President Martin A. Murcek, MD, testifed at a public hearing, held this summer in Pittsburgh, on the "any willing provider" issue. He urged the legislature to resolve "this very controversial issue."

REFORM Progress Report

Volume II

An Update on:
Health System Reform (26B) • Marketplace (26C) • New Society Subsidiary (26E) • Hospital Mergers (26F) • Capitation (26H)

A Message from the President Elect

Dr. Hobart

Dear Colleagues:

Thanks—and I use that word advisedly—to some of our politicians, physicians have been portrayed as "Johnnies-come-lately" in the public discussion on health system reform.

To counter that portrayal, a PENNSYLVANIA MEDICINE article written 10 years ago, in June 1984, was recently called to my attention.

At that time, a young(er) urologist was quoted as saying: "The health care delivery system in our country is under more severe stress than it has ever been," and that addressing problems without addressing causes "is a little like trying to bail out a leaky boat without doing anything about the damn holes in the bottom."

I might not say it exactly the same way today—and probably not as temperately. But I agree with that younger, and perhaps less seasoned version of myself, that "the more input physicians can have in some of the things that take place, the better off everyone will be."

One might be somewhat despondent, realizing that we have been singing pretty much the same tune for at least 10 years—and that we've been right on key. I don't know whether that's been good or bad. The health system does need to change, but with physicians taking a leading role in that change.

Like Winston Churchill, we physicians never give in to the forces that threaten at times to overwhelm us. I am happy to be able to report that real change is taking place—not in the political arena, where many expected it, but in the health care marketplace.

I think you will read with interest the articles in this "Progress Report," as they deal with the issues of managed care, capitation, and the activities of our own PennMed Member Services Company.

As your incoming president, I am dedicated to strengthening the role of physicians in the health care delivery system. I want to help give our younger physicians some certainty about their future—a place where they can build their professional and personal lives. I will do all I can. But to succeed, we need the commitment and the support of the newest members of our profession. The importance of their involvement cannot be overestimated.

There are no simple answers. There are sophisticated, complicated solutions that must be hard won. And we're going to give it our best.

John H. Hobart, MD
President Elect, Pennsylvania Medical Society

Editor's Note: Dr. Hobart will assume office as president on October 22, 1994, during the Society's House of Delegates meeting.

As New Reform Plans Wither, Marketplace Matures

Roger F. Mecum

Executive Vice President, Pennsylvania Medical Society

Last November in this publication, we laid before you the AMA's and your State Society's coordinated efforts to place physician interests close to the heart of the newborn Clinton health system reform plan. We outlined Society activities around the state—hearing testimonies, coalition building, policy development—to reach the decision makers evaluating Governor Casey's new reform legislation. At the same time, we informed our members that we were devoting a substantial portion of our resources to developing products and services to help them deal with rapid marketplace changes occurring in tandem with legislative reform.

Since last fall, we have witnessed incredible, unpredictable changes occurring within and around both the federal and state health reform plans. But while chances for major legislative change have dwindled, change in the health care marketplace may have far exceeded anyone's predictions.

Recognizing this shift, this fall's "Progress Report" offers not only a capsule report of your State Society's activities in the legislative arena, but also recaps of the status of managed care, hospital mergers, physician integration, and the State Society's new initiatives to help you deal with these marketplace factors.

National reform withers

At press time, Congress had recessed following passage of the Crime Bill, with no major action on health system reform legislation. The four to six weeks remaining—between the return from Labor Day recess and House adjournment—seems a very short period in which to pass this massive legislation in both bodies. Many experts are saying that only incremental reform is politically viable in the short term; most efforts seem to point to insurance reforms as the first incremental step.

A Leader in the Debate

Over the past year, the State Society has exhibited tremendous leadership in the debate over health system reform. The Society's policy statements and legislative initiatives have clearly demonstrated our leadership role in the discussion on the Hill, as well as with business and community organizations and other health care professional associations.

The Society's credibility on the Hill has never been greater. We have appeared and offered advice at every opportunity in and out of government on this priority issue.

The Society will continue to strengthen our efforts as issues surrounding health system reform emerge, but the future will require a new intensity and new forms of advocacy that will be both challenging and exciting.

In addition to our recognized presence and expertise in legislative arenas, the State Society during the past year has provided an array of materials for members and their patients, to aid in understanding and communication of the issues. These efforts have included:

- Mailing educational materials to thousands of members: "talking point cards" on the major points; audio tapes describing the "The Storm of Reform" and outlining its affects on medical practice; position papers on managed care, liability reform, and other major reform issues.
- Providing speaker training sessions for member across the state.
- Publishing articles in our monthly publications updating members on every legislative initiative;
- Publishing our opinions on reform in hundreds of newspapers statewide as "letters to the editor" from State Society President Martin A. Murcek, MD.
- Performing numerous media interviews by Society leaders on many different facets of reform.

Health system reform is occurring rapidly in the marketplace regardless of the efforts of legislators to reform the system. *The Wall Street Journal* noted on August 26, "Health reform, which a year ago appeared certain to be shaped by a single, sweeping piece of legislation, now is likely to be forged in a marketplace tussle between cost-minded purchasers and rapidly merging providers…The latest setback for broad health care legislation reflects an inability to muster a legislative majority for any single approach…Even without a major bill this year, the U.S. health system will see extensive change."

During the Labor Day recess, the AMA and the Society urged members to meet or call their legislators regarding a number of reform provisions:

- oppose the "king of the hill" rule for consideration of health system reform, which unfairly stacks the deck in favor of the Democratic leadership;
- support the Rowland House Bipartisan Healthcare Reform Act;
- oppose the Gephardt House leadership bill, which includes a massive new federal program known as Medicare Part C.

On August 29, the Society agreed to participate in a coalition letter to U.S. senators reiterating support for Senate Bill 2196—the Patient Protection Act. State medical societies were asked to join more than 60 patient advocacy groups strongly urging support of this bill.

This was the culmination of a yearlong, hotly debated but furiousl paced, Federation campaign— perhaps medicine's most intensive effort since the passage of Medicare. The campaign has included advertising in

major newspapers and magazines nationwide; AMA leaders testifying before the Senate Labor Committee on antitrust reform and other influential committees on reform related issues; press conferences in Washington, DC, to announce Federation positions, reactions, and plans; and massive grassroots efforts to encourage physicians to communicate with Congress as pressure points were reached in the health system reform debate throughout the year.

An AMA survey in mid-year showed that the public believes physicians are the most important source of information on health system reform.

Your State Society has closely monitored this campaign on a daily and sometimes hourly basis throughout the past year. Through our computer link with the AMA, and other technologies such as teleconferencing, we have been an active participant in Federation planning and communications.

Statewide reform languishes

With Governor Casey's illness, changes in legislative balance and leadership, and the diminishing of hope for national legislation, Pennsylvania's chances for major health system reform also dwindled over the summer.

Many key legislators, including House Majority Leader Ivan Itkin (D-Allegheny), have stated that Pennsylvania would only act on health system reform after the U.S. Congress addressed the issue. To the extent that Washington does not address the issue, we expect that pressure will build for Pennsylvania to act. For this reason, your Society continues constant monitoring and participation in all areas of state reform discussions.

Over the summer months, Senator Arlen Specter hosted a series of "forums" on health system reform. Your State Society attended. As State Senator Raphael Mustow (D-Luzerne) and others continued to push an "any willing provider bill," the State Society entered the debate. Society President Martin A. Murcek, MD, testified at a joint hearing of the House Insurance Committee and the Senate Public Health and Welfare Committee in August in Pittsburgh. "At the heart of this issue is the question of the fundamental right of patients to have a voice in choosing who keeps them well and who treats their illnesses," he said.

The Society's view on this and other issues was broadcast widely through "op-ed" articles in newspapers throughout the state.

One of the most significant developments of the summer has been the work of Senator John Peterson's (D-Chester) office to draft an insurance reform bill for consideration in the Pennsylvania General Assembly. The Society has worked with the Senate Health and Welfare Committee, chaired by Senator Peterson, to achieve changes in the language consistent with Society policy.

Progress Report

Race Toward Managed Care Accelerates

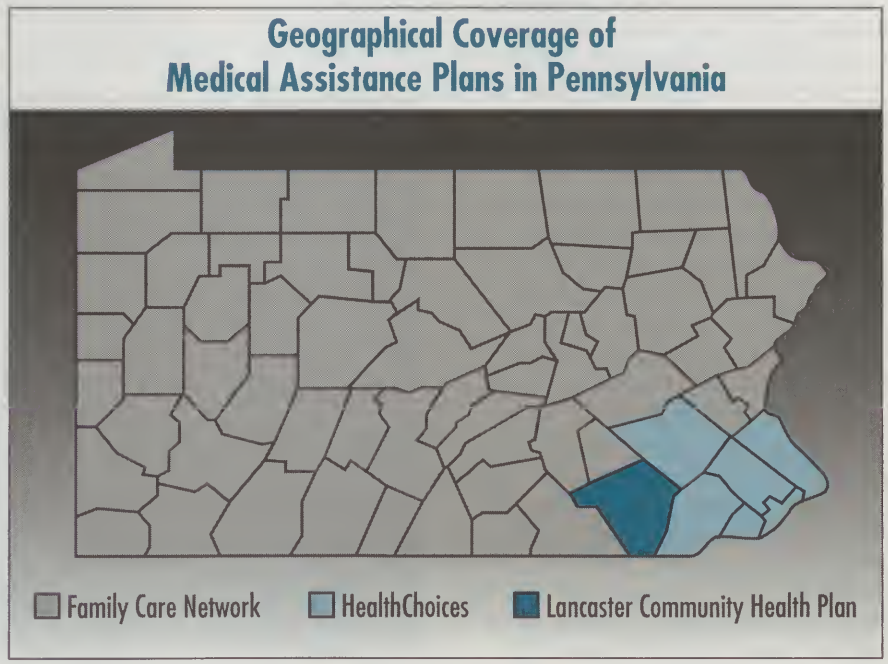
Roger F. Mecum

Executive Vice President, Pennsylvania Medical Society

Throughout the past year, health care marketplace activity has continued to accelerate toward managed care. The Group Health Association now estimates that over 18 percent of the Pennsylvania market is insured by health maintenance organizations (HMOs), higher now than the national average. Over the next two years, the move toward full capitation is expected to jump 20 percent nationwide. In rural areas, managed care is expected to increase four-fold, and Medicare is seeking to reduce inpatient utilization in Pennsylvania by more than 25 percent.

This past August, a large multi-specialty group practice in suburban Pittsburgh was purchased by Blue Cross of Western Pennsylvania, the first of several such acquisitions to be announced this fall. Blue Cross plans across the state are talking with physi-

→



cian groups to explore future joint or purchase arrangements.

But the Blues are not the only insurers talking to physician groups. U.S. Healthcare is expanding activities in central Pennsylvania, and HealthAmerica is developing in the Pittsburgh and Harrisburg regions, and intends to expand to other areas of the state, excluding Philadelphia. Pennsylvania Blue Shield's new network, PremierBlue, has been growing, despite complaints from the physician community concerning its exclusionary practices.

Meanwhile, the Society is continuing to conduct a series of meetings throughout the state to encourage physicians to form physician organizations (POs) and independent practice organizations (IPAs) to position physicians to negotiate effectively within these marketplace movements.

The Society's efforts to assist physicians in these areas is also meeting challenges. Blue Cross of Western Pennsylvania, which holds 65 percent of the health insurance market in the Pittsburgh region, is negotiating with physicians to create a management services organization (MSO) to provide administrative and practice management services to physicians. This type of activity is in direct competition with the efforts of the Society through its newly created subsidiary, PennMed Member Services Company (PMSCO), to offer similar services to physician groups (see "PMSCO" sidebar, next page).

MA restructuring

We reported in June that the Department of Public Welfare (DPW) plan to launch three new programs for providing medical services to Pennsylvania's Medical Assistance (MA) patients was proceeding on schedule. All three programs—each serving a different geographical area—will require MA recipients to choose a single provider for primary care, but they differ in significant ways.

The largest of the three in geographical coverage is the Family Care Network, which will serve children and youth under 21 years of age in 60 counties of the state on a fee-for-service basis. Almost as large in terms of eligible clients, HealthChoices will offer a choice among managed care plans to individuals of all ages within Philadelphia County and five adjacent counties—Berks, Bucks, Chester, Delaware, and Montgomery—which together contain roughly 40 percent of the state's MA recipients. The smallest, but potentially most ambitious program, is the Lancaster Community Health Plan. Limited to Lancaster County, it will begin as a fee-for-service program for patients of all ages, and is later slated to include a comprehensive computer database and a managed care option.

Family Care Network

The Medical Assistance primary care case management initiative to provide care to those under age 21 in 60 counties is being well received by most of the provider community. The department is already in phase four of provider recruitment. A state map on page 26C indicates the phases as they are currently being implemented.

Problems have arisen in some of the smaller counties, but generally the department is receiving physician commitments for patient caseloads at twice to three times the number of eligible MA recipients in the county being recruited.

Philadelphia-area proposals

DPW is now in the final stages of review of 12 proposals submitted in response to the request for proposal to expand HealthChoices, the managed care health insurance organization (HIO) in the six southeastern counties surrounding the city of Philadelphia. Many of the proposals bid on all three of the geographic areas created arbitrarily to equalize Medical Assistance populations in the areas. It was anticipated that Welfare Secretary Karen Snider would announce the successful bidders sometime after Labor Day. At press time, that announcement had not yet been made.

Also this fall, the suit brought on behalf of welfare rights groups and the Hospital Association of Pennsylvania to block the awarding of the HIO contracts was expected to be resolved. The judge who heard the original case seeking the injunction against the department is retiring. At press time, both sides have been attempting to negotiate a settlement.

Lancaster Community Health Plan

The contract between the DPW and the Lancaster Community Health Plan (LCHP) to implement a primary care case management plan for the MA population of Lancaster County is proceeding through the department's approval process and is expected to be finalized in mid-September.

LCHP, with the assistance of KPMG Peat Marwick, is currently putting the staffing and work plan in place to be ready to begin provider recruitment and patient enrollment later this fall. Work is also proceeding on the computerized community patient information network (CPIN), which will be unique to the LCHP project.

"Meanwhile, the Society is continuing to conduct a series of meetings throughout the state to encourage physicians to form physician organizations (POs) and independent practice organizations (IPAs) to position physicians to negotiate effectively within these marketplace movements."

New Subsidiary Helps Physicians Unite

Judd Mellinger-Blouch

Acting Marketing Manager, PennMed Member Services Company (PMSCO)

As managed care reaches into every corner of the commonwealth, the Pennsylvania Medical Society is actively working to give its members the skills and knowledge necessary to deal with these radical reforms. This work has taken place on two fronts: outreach through a new for-profit subsidiary and within the State Society itself.

Unite and lead

Only a year ago, an idea was approved by the Society's House of Delegates; within little more than six months, a new company was formed by the PennMed Board of Directors. The idea was to provide a service through the State Society which could help physicians evaluate the best possible practice arrangements—whether small practices or large, comprehensive plans or single problems.

Now, in October 1994, PennMed Member Services Company, better know as "PMSCO" (pronounced "pim-sco"), is leading the effort to help Pennsylvania physicians maintain a leadership role in the ever-changing health care system.

"If physicians want to have a voice in the reforms coming our way, then they need to unite and work together," according to Michael J. Prendergast, MD, chair of the PMSCO Board of Directors.

PMSCO's first order of business has been getting physicians to work together. While many physicians are accustomed to and prefer working solo or in a small group practice, they also understand that organizing into larger entities, such as individual practice associations (IPAs) or "group without walls," is becoming a necessity.

PMSCO has already signed contracts and begun working with a number of physicians around the state. Meanwhile, PMSCO staff continue to crisscross the commonwealth, making presentations on forming physician organizations (POs), meeting with concerned physicians, and submitting proposals.

Recently, a PMSCO presentation in a medium-sized city resulted in a contract to investigate the feasibility of such a physician organization. According to one of the leaders of the organizing effort, there were two reasons why a PO was needed: "The local hospital was seriously considering the start-up of a physician hospital organization (PHO), and we knew that if we were going to get involved in a PHO, it would be in the physicians' best interests to organize. The hospital also decided to start a medical group by buying up practices and putting people on salary. This caused a lot of concern among independent physicians."

First, PMSCO looked at the health care market by interviewing employers, purchasers, and providers, and reviewing health care provider data and demographics. A report at the end of the first phase of this effort told the physicians that the market could support the formation of a PO. The second phase involved the actual creation of the PO model that will best meet the needs of the market and the physicians involved.

One of the organizing physicians now reports, "Our long-term goal is to start a PO which would be structured to allow us to deal with risk taking, capitation, and the initiatives by our local hospital."

Information management is also a high priority for PMSCO. Various utilization management and quality assurance products and models are being analyzed. PMSCO staff is talking to practice managers, third-party payers, and others to hear about their information management concerns. The goal is to become a central resource to which PMSCO clients can turn when they need assistance handling the rapidly growing and changing demands for cost and quality data.

Managed care resources

While PMSCO works directly with individual physicians and groups, the State Society aims its broader efforts at providing information and resources on managed care to members. Through special publications and cutting-edge seminars, the Society has worked intensely over the past year to provide physicians the information they need to survive and thrive in a managed care environment.

This fall, the Society will offer the third installment in a series of managed care seminars. They are:

- "Successful Integration (How Physicians Can Work Together)" and "Health Care Contracting in an Era of Reform," to be held October 12 in State College and October 13 in Wilkes Barre.
- "Managing Information in a Managed Care Environment" and Making Capitation Work for You," to be held November 16 in Pittsburgh, and November 17 in Philadelphia.

Other seminars offer training in managing a medical practice and maximizing income despite the constricts of managed care and government regulation. For more information, call Linda Boyer at (800) 228-7823.

Other resources available from the State Society include the Managed Care Resource Kit and the Managed Care Handbook. The Resource Kit, free to Society members, includes listings of pertinent journals and publications, selected managed care articles, listings of PPOs and HMOs, Society position papers, the Society's Practice Management Consulting Network, and more. The Managed Care Handbook, prepared by Conomikes Associates, provides more detailed planning information for physician practices facing decisions regarding managed care in their local marketplace.

For a complete list of State Society publications or seminars, or to order one of these publications, call the Department of Physicians Services at (800) 228-7823.

For more information about PMSCO and physician integration and organization, call Sharon Orlowski or Cathy Williams at (800) 228-7823.

Health Care Providers Propelled Toward Mergers

Fred D. Baldwin

PENNSYLVANIA MEDICINE contributing author

Like commuters scrambling for a train they fear may be leaving the station, Pennsylvania hospitals have been scrambling this year to form agreements intended to protect or expand their market niches.

The agreements range in form from general cooperative agreements to full-fledged mergers, and they may link hospitals to each other or to insurance companies.

"A major driving force is the prospect of health care reform," says Lou Gable, director of media relations, Hospital Association of Pennsylvania. "Nobody is sure what it's going to look like. But no matter whose bill passes, or even if no legislation is enacted, market forces are reshaping health care. The trend is toward managed care. And when you get to managed care, you have to be large to compete, or find a niche."

Both participants and outside analysts agree that market forces are more important than politics. Improvements in medical technology and medical procedures have affected hospital economics on both the cost and revenue sides of their ledgers.

On the cost side, referring to what some call the "arms race in medicine," Gable notes that "competition in the medical field tends to increase costs, not lower them. If the hospital down the road has MRI, you have to have it or lose your patients."

At the same time, improved technology and procedures have shortened hospital stays, so that, on average, hospital occupancy rates are below 70 percent.

"Demand for hospital care in general has dropped fairly dramatically," says Mark Pauly, chair of the Department of Healthcare Studies at the University of Pennsylvania's Wharton School of Business. "Rather than having a hospital go bankrupt, a more graceful way out is to merge with the hospital down the street."

"Continued cutbacks in Medicare payments are another worry," says Gable. "Hospital CEOs are looking at what's being proposed in Washington and thinking, 'Oh, my Lord!' "

Another factor driving hospital agreements is the increased bargaining power of health maintenance organizations (HMOs). Pauly calls mergers and other agreements a "circle-the-wagons" response to managed care.

> ***"Nobody is sure what it's going to look like. But no matter whose bill passes, or even if no legislation is enacted, market forces are reshaping health care."***
>
> ***—Lou Gable***
> ***Hospital Association of Pennsylvania***

Although the *Philadelphia Inquirer* recently described hospitals as in the grip of "merger mania," there appears to be no one source of statewide statistics on the trend. The problem for record-keepers is that agreements that do not involve changes in ownership structure often need not be reported to state agencies—but such agreements are not necessarily exempt from antitrust scrutiny by the attorney general. (See box on the next page for the perspective from the Attorney General's Office.)

In general, hospitals may form alliances for any or all of three reasons:

1) They may wish to improve their negotiating positions, especially with insurance companies and HMOs. This consideration has been mentioned in reports on plans to create regional networks of hospitals in Harrisburg, Lancaster, Reading, and York areas.

2) They hope to reduce administrative overhead. A merger of three Lycoming County hospitals has been projected to save $40 million over five years, but the attorney general's office has insisted that over three-quarters of this be returned to consumers in the form of lower costs. Proponents of a planned merger between Geisinger Medical Center and Bloomsburg Hospital have expressed hopes that the planned merger could save between $1.5 and $2 million annually.

Although virtually all announcements of new alliances mention cost savings as an expected benefit, Pauly doubts that these savings will materialize to the extent expected. "The general message of the research," he says, "seems to be that bigger hospitals aren't necessarily more efficient than smaller ones. All you get are some economies in the laundry room and in designing logos."

3) Profitable hospitals also merge to increase access to new market segments. Improved market positioning underlies an agreement between InterCare Behavioral Health Services of Pittsburgh and the Belmont Center for Comprehensive Treatment (in Philadelphia and itself one of four hospitals in the 1,000-bed Albert Einstein HealthCare Network) to form a preferred provider organization (PPO). PPO providers generally accept discounted fees for improved access to certain groups of patients. InterCare and Belmont hope to be able to offer almost statewide managed care services to mental health patients.

According to an article in the May/June 1994 *Group Practice Journal,* collaborative agreements among health care institutions often

go through successive stages, although there is nothing inevitable about the progression. The first stage consists of simple agreements to cooperate in matters like patient referrals. The second stage involves administrative mergers. The third involves establishment of common clinical standards. The fourth stage consists of a total financial merger.

Gable says that most concerns over proposed mergers arise from community groups fearful that they'll lose easy access to service: "They say, 'You're not going to take away *my* hospital!' " He notes that such fears produced a major public outcry protesting a merger between hospitals in Oil City and Franklin, both located in sparsely populated Venango County, roughly halfway between Pittsburgh and Erie.

The following list of agreements is compiled from press reports and is not necessarily complete. It does suggest the extent to which the institutional face of health care in Pennsylvania is changing.

- Hahnemann University announced in April that it would merge all of its operations into a new $1.5 billion organization headquartered in Pittsburgh. It thus became part of the Allegheny Health, Education and Research Foundation, a 2,000-bed hospital and research network already consisting of four Philadelphia-area hospitals and the Medical College of Pennsylvania.The merger of Hahnemann and the Medical College of Pennsylvania will make the new institution the second largest in the nation.
- In June, Presbyterian Medical Center of Philadelphia said it would join a new medical network set up by Independence Blue Cross. Independence Blue Cross itself announced a merger with Graduate Health System to create one of the region's largest private companies with combined revenues of $2.5 billion.
- Thomas Jefferson University joined with Pennsylvania Hospital, and Northeastern Health System formed an alliance with Temple University Hospital.
- The University of Pennsylvania Health System (UPHS) and Germantown Hospital and Medical Center signed a formal affiliation agreement in April. This became the first step toward creating a UPHS network of community hospitals linked with physician groups and other providers throughout the Greater Delaware Valley.
- Five other Philadelphia-area community hospitals have begun negotiations to form a combination large enough to compete effectively. The five are Chestnut Hill Hospital (Philadelphia), Pottstown Memorial Medical Center, Montgomery Hospital (Norristown), Grand View Hospital (Sellersville), and Chester County Hospital (West Chester).

Antitrust Law and Mergers: The Attorney General's Review

"There's this sea of change underway," says Robert R. Gentzel, spokes person for the Pennsylvania Attorney General, Ernie Preate, Jr. "It's gone from an area where we didn't have any issues to one where there are significant issues—among them, physician access."

Gentzel is referring to the wave of mergers and other alliances among hospitals and other provider entities. He notes that agreements less formal than full mergers (for example, to divide medical specialties between hospitals) may hurt both physicians and consumers and be considered "restraints on trade." Yet he emphasizes that a review of proposed merger for antitrust implications does not necessarily lead to either state or federal intervention.

In one recent instance, however, Preate permitted a merger of three Williamsport-area hospitals to go forward uncontested only when the hospitals involved agreed to pass on $31.5 million of a projected $40 million cost savings (over a five-year period) to area residents in the form of free or reduced-cost health care. Other provisions of the May 1994 agreement forbade the newly created Susquehanna Regional Healthcare Alliance from entering into exclusive contracts with most classes of health care providers (excluding emergency room physicians, anesthesiologists, radiologists, and certain other specialists who often work as employees). The alliance must also provide an open staff and may not, with a few defined exceptions, employ more than 40 percent of the physicians in Lycoming County.

Antitrust laws are based on the premise that vigorous competition ensures that consumers will receive the highest quality products at the lowest prices. These laws generally prohibit mergers that will result in large concentrations of market power that would give the merger entity the power to reduce output or raise prices above levels that would exist under conditions of open competition.

Daniel Clearfield, Pennsylvania's deputy attorney general in charge of the Public Protection Division, explains that his office uses an econometric model that measures market concentration endorsed by the U.S. Justice Department and Federal Trade Commission to assess whether a proposed merger is likely to have an unduly adverse effect on competition. The model is complex, but the AG tends to become concerned when any vendor captures more than 40 percent of the market within the geographical area within which it competes.

Clearfield cautions that this rule of thumb can be hard to apply to hospital mergers, especially in rural areas. In regions already served by only a few hospitals, almost any consolidation is likely to set off warning bells. However, unprofitable hospitals may rely on a "failing company" defense, or the AG may also approve anti-competitive mergers among profitable hospitals if it can be shown that an alliance will produce consumer savings.

"In Williamsport," he says, "concentration levels were very high after the merger. But the benefits were so high that they offset them."

Several bills have recently been introduced in Congress to exempt certain health care mergers from federal or state antitrust scrutiny. Clearfield says that he has not analyzed those bills closely, but that they generally seek to make it easier for a hospital to employ the "failing company" defense.

Taken together, they have approximately 1,300 beds. As of late July, a spokesperson described these institutions' talks as "preliminary," indicating that they could lead to anything from a full merger to some other kind of joint venture.

- Mercy Health Plans and Aetna Health Plans announced in August a partnership to link services in Luzerne, Lackawanna, Carbon, and Wayne counties to the Lehigh Valley, Central Pennsylvania, and the five-county Philadelphia area. This arrangement makes Aetna the largest HMO in Pennsylvania, managing health care for more than 400,000 Pennsylvania residents.
- Geisinger Medical Center and the Bloomsburg Hospital announced intentions to merge and began public forums to discuss the idea.
- Pittsburgh's Divine Providence Hospital, the smallest in that city, announced in March that it would become part of Mercy Health system, the nation's second largest system of hospitals.
- Capital Health System (Harrisburg Hospital) and Polyclinic Medical Center, also in Harrisburg, announced in July a formal plan to merge operations. Capital Health System is also reported as considering formation of a regional network with Lancaster General Hospital, York Hospital, and the Reading Hospital and Medical Center.
- Also in the Harrisburg area, Penn State's Milton S. Hershey Medical Center and Holy Spirit Hospital, Camp Hill, have announced a formal agreement to affiliate. Hershey is already affiliated with St. Vincent Hospital in Erie and Lehigh Valley Hospital, and has had "very preliminary" talks about an affiliation with St. Joseph Hospital. The Carlisle General Hospital is also reported as considering a Hershey-Holy Spirit alliance.
- In Williamsport, three of Lycoming County's four hospitals—Williamsport Hospital and Medical Center, Divine Providence Hospital, and Muncy Valley Hospital (already a subsidiary of Divine Providence)—created a joint operation known as Susquehanna Regional Healthcare. This merger led to intervention by the Pennsylvania attorney general, resulting in a settlement by which over $30 million of a projected $40 million in cost savings would be applied to consumer benefits.
- Suburban General Hospital in Bellevue and the Western Pennsylvania Hospital in Bloomfield have agreed to discuss affiliation.

Progress Report

Capitation: The Upside Vs. the Downside

Cathy A. Williams

Practice Management Consultant, PennMed Member Services Company (PMSCO)

Portions of this article incorporate research materials prepared by the American Medical Association. The Society appreciates the use of the AMA materials.

Physicians have historically been reimbursed on a fee-for-service basis—whether paid for by farm produce, as recorded in some early county medical society publications, or by modern health care insurance plans. But, as physicians well know, many new and different reimbursement methods—most notably capitation—have surfaced in the '90s. The overriding goals of most of these methods is to control costs by shifting risk to providers.

In the near future almost every physician in the state will face a decision about capitation.

An overview

Capitated providers often are said to be "at risk" because they receive the same payment per enrollee regardless of their enrollees' actual utilization. Some contracts provide minimal copayments for certain services, such as visits. However, capitation payments are not increased when enrollees become seriously ill and require expensive care—nor reduced for enrollees who remain healthy and do not need much care. Capitated providers profit to the extent that their expenses are below their capitation payments, and they incur a loss if their expenses exceed those payments.

Under pure fee-for-service payment arrangements, providers risk that their cost of delivering a service will be above the payment allowance for the service, but the payer alone assumes the risk that enrollees will have higher-than-projected utilization. Capitation shifts the utilization risk to the provider. If the utilization of enrollees assigned to a capitated provider is higher than anticipated by the capitation rate, the provider's profit margin will decline, and the provider may even incur a loss.

Capitation is an opportunity to maximize revenues. It challenges providers to efficiently manage their enrollees' utilization, so that their delivery costs are below their aggregate capitation payments.

But capitation also makes providers liable for any resulting losses when factors outside of their control result in high utilization, despite their best efforts at efficient clinical management. These uncontrollable factors include patient demand, other provider referrals, errant actuarial assumptions, or adverse selection. (Adverse selection occurs when the patients assigned to a physician need more care than the enrollee population as a whole.)

Capitation necessitates limitations on enrollee freedom of choice of provider. As a practical matter, enrollees must be required to select, or be assigned to, a specific provider for capitated services. Otherwise, the payer could end up routinely paying twice for capitated services: once through a capitation payment to a provider, and then again when the enrollee uses a different provider. As a result, capitation typically is only used by health

maintenance organizations (HMOs) and independent practice organizations that subcontract with an HMO on a global capitation basis.

Other managed care payers, such as preferred provider organizations (PPOs) generally do not require enrollees to use a specific provider. However, the lines between the various types of managed care plans are blurring. For example, some PPO plans "carve out" a category of services and require enrollees to use a single provider—called a "center of excellence"—or a select network for the carved-out services. In those cases, the PPO might elect to pay the designated providers on a capitation basis. Capitation carve-outs are becoming more common, especially in the case of mental health and psychiatric services.

Will the HMO Negotiate?

It depends upon how much the HMO needs you. Generally speaking, when an HMO first enters a market, the HMO is more accommodating to physicians and more willing to bargain over price and other terms of capitation arrangement. The HMO needs broad-based physician participation so that it can, in turn, convincingly demonstrate to prospective groups and individual enrollees that they will have the same—if not better—access to a wide selection of quality providers, and may not even have to change their personal physicians.

On the other hand, once an HMO is established in a market area, and has both a comfortable enrollee base and a complete provider panel, the HMO may be less inclined to negotiate with providers. Some HMOs essentially adopt a take-it-or-leave-it attitude, especially with respect to provders in over-supply in the area. If an HMO only needs 10 cardiologists to take care of its enrollee population, and there are 20 in the area, the HMO may be willing to take the risk that half will be willing to accept its unilateral terms.

Physicians also are handicapped by the antitrust laws. Physicians cannot band together and collectively bargain with an HMO. The antitrust authorities view such conduct as price fixing and/or a group boycott—both per se violations of the antitrust laws and punishable by severe criminal and civil penalties. The AMA is working hard to convince Congress to reform the antitrust laws to level the playing field. However, for the present, individual physician-HMO negotiations are often akin to David against Goliath.

On the brighter side, not all HMOs are interested in price alone. Physicians also frequently can take steps to better equip themselves to compete in the managed care market. One option physicians should consider is the formation of a physician-led integrated delivery system (IDS), such as an independent practice association (IPA) or a large multi-specialty group practice that owns or is aligned with a hospital system. If these IDSs are economically integrated and provide a new product, they can anticipate a measure of antitrust protection.

The upside of capitation

Capitation can benefit payers, physicians, and their patients when safeguards are in place to protect quality and access.

The most commonly cited benefit of capitation is that it provides an added incentive for physicians to maintain their patients in good health and to craft a cost-efficient treatment plan when their patients need care.

A less talked about, but equally positive benefit of capitation is that it puts physicians back in charge of the medical management of their patients. The goal is quality care at reduced cost.

Most physicians paid on a fee-for-service basis deliver cost-efficient care. However, capitation and other risk-assuming payment mechanisms create an added incentive for physicians to efficiently manage their patients' care. Putting physicians in a position to profit or incur a loss—depending upon the cost-effectiveness of their clinical management—makes them stakeholders and even more inclined to practice cost-efficient medicine (as well as provide superior quality care). Returning the medical management to practicing physicians also makes since they are in the best position—other than patients themselves—to influence utilization.

When physicians are at risk for the services they manage, there is potential for cost savings. While physician payments account for only about 20 percent of the health care dollar, physician practice patterns and prescribing have been estimated to account for 60 to 80 percent of all health care expenditures.

For example, a hospital can reduce its cost of operation through more efficient management and purchasing of supplies and services. However, only physicians can control inpatient admissions and lengths of stays—and only physicians can control the services ordered during the patient's admission.

"Capitation can benefit payers, physicians, and their patients when safeguards are in place to protect quality and access."

Risk-assuming, physician-led integrated delivery systems—armed with a sophisticated clinical management system—can be extremely effective in implementing innovative cost saving and quality improvement strategies. The physicians work together to address the entire continuum of care, rather than isolated events or the care of a single provider—and possess the ideal combination of motivation, expertise, and professionalism. Indeed, experience shows that putting physician-led systems at risk can be more effective in limiting costs, and less expensive to administer, than payer-driven utilization review and cost control efforts.

The Permanente Medical Group, associated with the Kaiser HMOs in California, is an example of a physician-led integrated delivery system that has found creative ways to reduce costs without compromising quality. The group engages in intensive preventive care, including the management of patients with chronic illnesses such as asthma, to minimize the number of occasions acute care

intervention is needed. The patient remains in better health, and costs are reduced by decreasing hospitalizations. These kinds of medical management techniques have allowed physician-led systems across the country to be successful.

Physician-led systems also can provide tough competition in an HMO market that is becoming increasingly dominated by a few large insurers. For example, in the Los Angeles market where a majority of the population is enrolled in HMOs, a physician-led health plan offered by the Mullikin Medical Centers recently offered the lowest premiums. In Boston, a physician-led HMO offers the lowest prices.

These physician-led systems have the capacity to eliminate waste and lower cost because they do not have the administrative overhead and profit margins of insurance companies and are better equipped to manage care efficiently.

Don't Forget Your Professional Liability Exposure!

Managed care, by itself, does not expose a physician to professional liability risk. Indeed, a physician-led IDS may be able to reduce malpractice risk by improving the quality of care. However, physicians subject themselves to professional liability risk if they allow the requirements and incentives of a managed care plan to compromise the quality of care they provide. Neither a physician's contractual obligations, nor the physician's monetary woes, will be a valid defense in a professional liability action. Remember:

- If the plan limits the number of referrals to out-of-network providers, make sure that the provider network contains an adequate number and distribution of high caliber providers, that primary care physicians have access to a sufficient number of specialists, and that exceptions are allowed in emergencies and when the enrollee needs specialized care not available through the network.
- If you disagree with a pre-authorization denial, appeal the denial to the highest level and be honest with your patient regarding your recommended treatment plan.
- Never refuse medically appropriate care for financial considerations. Treat your managed care patient with the same professionalism as you care for your fee-for-service patients.
- Don't agree to provide services that you are incapable of delivering consistent with the standard of care—unless you can subcontract that work to another qualified provider.

Profit sharing, autonomy, quality

Capitation allows physicians to share in the profits of their effective clinical management. A globally capitated integrated delivery system can use those profits to increase provider reimbursement or re-invest them in the delivery system to improve efficiency and quality.

In contrast, under a fee-for-service system, the profits from sound physician clinical decision making largely go to the payer and may be siphoned out of the system to the payer's investors. While the managed care payer may have a bonus system in place, distribution of the fund frequently is discretionary, and the total distributions typically are relatively small when compared with the payer's profits.

Capitation also puts physicians back in charge of clinical management. Providers and their patients like the resulting autonomy. When a service is covered by a capitation payment, the capitated provider or integrated delivery system makes the decision as to whether the care is provided.

Physicians are sometimes intimidated by capitation, at least initially. It is a radical departure from what they are accustomed to. They are concerned that "free" care will result in increased patient demands, and they are not comforted by HMO claims of minimal risk. However, as physicians gain experience with capitation, many realize that they can profit from a fair capitation arrangement, and like the autonomy and guaranteed income. Physicians also do not like to see the profits from their sound clinical management siphoned out of the health care system to a managed care payer's investors, and are increasingly opting for capitation and other risk-shifting arrangements that retain the profits within the health care system.

The downside of capitation

From the provider perspective, an obvious downside of capitation is the risk of loss. Capitated providers will lose money if their cost of delivering the care is greater than their aggregate capitation payments, any copayments they are due and able to collect, plus any stop-loss or reinsurance revenue. As in the case of any reimbursement mechanism, providers may lose money if they under estimate their per-unit costs. However, capitated providers can also lose money if their enrollees' utilization is higher than the capitation rate can absorb.

"Physicians are sometimes intimidated by capitation, at least initially."

In contrast to pure fee-for-service, capitated physicians who fail to efficiently manage the delivery of capitated services to their enrollees may incur losses. When managed care payers project utilization for purposes of determining the capitation rate, they expect utilization lower than would be expected under a fee-for-service system—not "business as usual." Some physicians will need to adapt their clinical management styles in order to succeed under a capitated system.

Of concern are factors beyond the physician's control which may put the physician in the red at the end of the month:

- Difficulty in predicting utilization, especially on a specialty-specific level. An actuary could correctly project overall physician utiliza-

tion, but miss the mark when allocating physician expenses among the various specialties.

- The capitated physician alone does not control utilization. Patient demand and provider referrals also strongly impact utilization, especially in the case of initial visits.
- A capitated physician also could be the victim of adverse selection. For example, the enrollees who select a primary care physician as their gatekeeper may be sicker and need considerably more visits, laboratory work, and other capitated services than the HMO's enrollees as a whole.

In light of these risks, it is obvious that tomorrow's successful physician will be the one who minimizes the threats and maximizes the many opportunities of a captiated payment system. Such a physician will have the skills to analyze the risk potential posed by a group of capitated patients, negotiate an appropriate contract with the payer, and then provide quality patient care for a cost that is below the capitation rate.

PMSCO and the Pennsylvania Medical Society will continue their efforts to help physicians deal with capitation, both economically and clinically. Any physicians with questions or concerns should call PMSCO or the Society's Department of Medical Economics at (800) 228-7823.

IDS Clinical Management Systems

A sophisticated clinical management system provides the integrated delivery system (IDS) with all the tools needed to measure, evaluate, and improve the quality and cost effectiveness of care, including:

- Utilization review (UR)
- Quality assurance (QA)
- Resource utilization management (RUM)
- Outcomes measurement
- Clinical guidelines, and
- Risk management

Advantages of Physician Integration

- *Better "value"*—Physician-led integrated delivery systems (IDSs) often can deliver better value, i.e. maximizing quality and patient satisfaction, while minimizing cost, because of efficiencies and improvements resulting from sophisticated information systems, "seamless" care, economies of scale, group purchasing discounts, management expertise, etc.
- *Sophisticated information systems*—Shared financial and clinical data allow IDSs and their members to compare providers and review the complete picture, i.e., the entire episode of care versus individual units of care. This data can be used to improve practice and clinical management, and is essential for effective marketing.
- *"Seamless care"*—A fragmented delivery system can result in duplication of services and lack of coordination among providers, both of which can be reduced through integration. For example, IDSs can reduce the lengths of stay of patients waiting for nursing home beds by anticipating the needs of their patients and "purchasing" the beds in advance. Trust and communication among the IDS members also can reduce tests and procedures.
- *Economies of scale*—These can be obtained through broader distribution of fixed costs, increased productivity from increased volume, and reduced duplication of tasks, technology, and facilities. For example, physicians can reduce their fixed cost of operating a laboratory and their variable test processing cost by sharing a single high volume laboratory.
- *Group purchasing discounts*—These are often available for medical and office supplies, furnishings, equipment, and space; health care, life disability, professional liability, and other insurance; practice management and consultative services; billing and collection services, etc.
- *Administrative relief*—Pooling of resources and practice needs facilitates acquisition of practice management staff and expert legal and other consultation services that are not feasible or practical for physicians to individually obtain, and leaves physicians free to practice medicine.
- *Capacity*—Many HMOs and other managed care payers would prefer to deal with a single physician-led IDS that can deliver a broad package of medical services, and avoid the expense and hassle of dealing with a multitude of individual providers.
- *Global capitation*—Both physicians and their patients can realize advantages from global capitation and other risk-assuming payment mechanisms.
- *Access to capital*—Integration can increase access to capital needed to improve information systems, expand facilities, purchase new technology, and finance other projects undertaken to maintain and improve competitive viability.
- *Patient referrals/admissions*—Legally sound ways to direct the flow of patients are especially important in those areas where there is intensive competition for patients as a result of an excess supply of specialists or beds.
- *Reduced isolation*—"On call" and other coverage availability, as well as opportunities for consultation and increased interaction with other physicians, can improve with integration and make integration especially attractive to rural physicians.
- *Physician unity*—An IDS provides a framework for group decision making and communication with other players. For example, a physician organization can be especially helpful when dealing with a hospital regarding a physician/hospital joint venture by enabling physicians to speak with one voice.

The Society acknowledges that physician-led IDSs can be beneficial to physicians and their patients, and has formed a consulting company, PennMed Member Services Company (PMSCO), to assist physicians in taking a leadership role in the integration movement. At the same time, the Society recognizes that physicians can provide quality, cost-efficient care without being aligned with an IDS, and we support the right of physicians to freely choose the location and setting in which they deliver care and how they are aligned with other providers.

REPORT STUDIES STATE'S UNINSURED CHILDREN

An estimated 250,000 children in the commonwealth under the age of 18 are without health insurance, according to a special report released this summer by the Pennsylvania KIDS COUNT Partnership.

The report, "Uninsured Children in Pennsylvania," says the lack of insurance and inadequate resources are the major reasons why children and adolescents do not receive primary and preventive health care.

Other key findings include:

- Children under the age of 6 and children over the age of 14 are less likely to have health insurance than children ages 6-13.
- Children under the age of 6 account for 36.5 percent of all uninsured children.
- There are 112,501 children without health insurance whose annual family income is between $14,800 and $29,599; 24,242 children without health insurance whose annual family income is between $34,781 and $44,399; and 47,501 children without health insurance whose annual family income exceeds $44,400.
- Of the estimated 250,000 uninsured children in Pennsylvania, 71,214 (25.5 percent) are eligible for the no-cost component of the state Children's Health Insurance Program, and an additional 8,265 (3.3 percent) are eligible for the low-cost component of the same program.
- If the funding were made available to enable all eligible uninsured children to be covered by Pennsylvania's public health insurance programs, the Children's Health Insurance Program, and Medical Assistance, 139,425 (55.8 percent) of the estimated 250,000 uninsured children under the age of 18 would have health insurance.

Members of the Pennsylvania KIDS COUNT Partnership include: Pennsylvania Partnerships for Children, the Office of Child Development at the University of Pittsburgh, the Pennsylvania Council of Children's Services, and the Pennsylvania Department of Public Welfare. All partnership activities are supported by a grant from the Annie E. Casey Foundation.

Children Without Health Insurance and Children Eligible for MA

Age Group	Total Uninsured	MA Eligible	%	Non-MA Eligible	%	Total %
Under 6	91,250	33,886	37.1	57,364	62.9	100.0
6-13	101,250	6,686	16.5	84,564	83.5	100.0
14-17	57,500	9,375	16.3	48,125	83.7	100.0
Total Under 18	**250,000**	**59,947**	**24.0**	**190,053**	**76.0**	**100.0**

What this table represents:

- Of the 250,000 Pennsylvania children without health insurance, 59,947 are eligible for Medical Assistance (MA). If these children were enrolled in the existing MA program for which they are already eligible, there could be an immediate 24 percent reduction in the number of uninsured Pennsylvania children.
- There are twice the number of children who are MA eligible in the under 6 age group (33,886) than in the 6-13 age group (16,686). This is of particular concern since prevention of later health problems and developmental delays is critical in the youngest age group.
- Of all uninsured children ages 14-17, 16.3 percent (9,375) are MA eligible.
- Of the 250,000 uninsured children, 76 percent (190,053) remain not covered by MA; some of these children may be eligible for other types of no-cost or subsidized health insurance programs.

PRACTICE PARAMETERS NEWS

TREATMENT GUIDELINES OFFERED FOR EAR CONDITION

The U.S. Public Health Service's Agency for Health Care Policy and Research has released treatment guidelines for one of the most widespread health problems in young children—otitis media with effusion—which is characterized by the presence of fluid in the middle ear and often by fleeting off-and-on hearing loss for short periods of time.

Also known to some as serous otitis or "glue ear," the condition differs from acute otitis media in that the child generally does not feel pain or have fever.

The guidelines say that observation or watchful waiting is effective for most children since otitis media with effusion usually disappears within three to six months without treatment.

They also say that antibiotics appear to clear up the condition in a small number of children and should be considered as an option for dealing with the condition during the first three months, but they can also cause reactions such as diarrhea and rashes.

According to the guidelines, if the condition has lasted for three months, and the child has a mild-to-moderate hearing loss in both ears, the options are either antibiotics or a draining of the fluid. Steroid therapy, antihistamines and decongestants, and surgical removal of the adenoids are *not* recommended.

Free copies of "Managing Otitis Media with Effusion in Young Children," a quick reference guide for clinicians, and "Middle Ear Fluid in Young Children," a brochure for parents, are available from the AHCPR Publications Clearinghouse, P.O. Box 8547, Silver Spring, MD 20907; (800) 358-9295. Free single copies of the more detailed clinical practice guidelines are also available on a limited basis.

Pharmacy Recognition

Tobacco-free pharmacies are to be recognized by the State Society through a certificate program this fall. Watch for the certificate in your local pharmacies; more information on the program will be published later this year.

Promoting Living Wills

Maureen Hoepfer

Mary Jo Bonner, MD, PhD, an internist, is a partner in Shillington Internal Medicine Associates, Berks County. For the past 10 years, she has been promoting the importance of advance directives—more commonly known as living wills—to her patients, to the community, and to her colleagues. As chairperson of the Society's Commission on Bioethics, Dr. Bonner played a major role in the Society's negotiations before the enactment of the Pennsylvania Advance Directive for Health Care Act.

The deaths of two prominent Americans—Richard Nixon and Jacqueline Kennedy Onassis—in recent months sparked a burst of national publicity for advance directives. Both Nixon and Onassis had written living wills to ensure their medical wishes would be carried out in their final days. All 50 states have passed legislation recognizing advance directives, including Pennsylvania, which in 1992 enacted the Advance Directive for Health Care Act. However, very few people fully understand what living wills are or what circumstances govern their applicability, according to Mary Jo Bonner, MD, PhD. Fewer yet have taken steps to obtain one.

Patients don't understand living wills

According to a 1993 State Society survey, three in five Pennsylvanians have heard or read about the state's living will statute, although only one in five has actually completed an advance directive. More than half of the survey respondents who have not completed a living will said they would like to do so. Another study conducted by physicians at Thomas Jefferson University in Philadelphia showed that only eight to 15 percent of American adults prepare living wills in advance of the time they can legally rely upon them.

"In my opinion, physicians, especially primary care physicians, need to spend time with their patients and explain the value of signing a living will," says Dr. Bonner. "Misunderstanding is rampant. Many patients are intimidated by the legalese involved with advance directives. They need their doctors to walk them through the thinking and steps involved with drafting a living will. This takes time. It's not a simple statement you squeeze in while checking a patient's blood pressure or monitoring his or her blood sugar. It requires dialogue, conversation, and exchange of information."

Laws authorizing advance directives

As medical technology advances, physicians will be confronted more frequently with legal and ethical issues related to the propriety of withholding or withdrawing life-sustaining support from patients with incurable and irreversible medical conditions. According to Dr. Bonner, physicians can look to two laws for guidance: the Federal Patient Self-Determination Act and Pennsylvania's Advance Directive for Health Care Act.

The federal act, effective December 1991, requires Medicare- and Medicaid-certified hospitals, nursing facilities, hospices, home-health agencies, and pre-paid health plans to provide each patient with written information on the patient's rights under state law to accept or refuse life-sustaining treatment and to formulate advance directives.

Dr. Bonner

Ms. Hoepfer is a marketing associate for the Society's Educational and Scientific Trust. This article is one in a series, begun in January 1993 and ongoing through 1994, sponsored by the Trust's endeavor to address public health needs, Keystones of Public Health.

"As a result of this law, public education about living wills began. People are now notified about their rights and can make informed decisions that can be carried out if they have an advanced terminal condition," Dr. Bonner explains.

In 1992, Dr. Bonner was heavily involved in the drafting of and subsequent negotiations surrounding Pennsylvania's Advance Directive for Health Care Act. This legislation formally authorized advance directives. Under the law, the directive can take two forms: 1) a living will which directs physicians on what treatments a patient wants or does not want should he or she become unconscious or unable to make decisions; or 2) the appointment of a surrogate who may be empowered to make decisions for the patient if he or she becomes incompetent. The living will or proxy designate becomes operative if the patient has an advanced terminal illness and is incompetent or is in a persistent vegetative state. Its activation requires careful clinical assessment.

Drawbacks of living will laws

Although these laws have been effective in educating patients about advance directives and protecting the rights of dying patients, Dr. Bonner says there are drawbacks. "Now that advance directives exist as law, it means there is another area where the government can step in and interfere with the practice of medicine," she explains. "Laws generate rules and regulations that often become inflexible. However, in medicine, we need to be flexible because we are dealing with human beings—each unique in his or her own way."

Dr. Bonner cites two cases which illustrate the inflexibility of the law at times. One is the much-publicized case of Nancy Cruzan, in a persistent vegetative state as a result of a motor vehicle accident in 1983, whose parent's wishes for removal of nutrition and hydration finally prevailed after years of legal battles.

"The U.S. Supreme Court's ruling in the Cruzan case was very narrow," explains Dr. Bonner. "The Supreme Court recognized the individual's constitutional right to refuse medical treatment, but delegated the regulation of this right to the states."

A similar case in Philadelphia also shows the tragic results of court involvement in this issue, Dr. Bonner says. Joseph Fiori, a 21 year old who in 1971 sustained extensive brain damage in a motorcycle accident, later suffered an epileptic seizure that left him in a permanent vegetative state. In 1992, Fiori's mother requested that the nursing home remove her son's feeding tube. The nursing home said it required a court order to do so. The lower court found the mother to be a valid moral surrogate.

Since then, however, the Pennsylvania Attorney General's Office has fought the removal of Fiori's life support, contending that Fiori's mother must prove with "clear and convincing evidence" that Fiori expressed a preference, orally or in writing, for death in this kind of condition. "That means Joseph Fiori would have had to make a declaration about life support 23 years ago when he was only 21. In my opinion, that's unrealistic," Dr. Bonner says. "The Pennsylvania Medical Society has filed an amicus brief in this case supporting the right to withdraw Fiori's life support."

Spreading the word

Education and communication are the keys to avoiding more tragedies like the Joseph Fiori case, Dr. Bonner contends. In Berks County, she has made a personal mission of informing people about the value of living wills. During the past few years, she has given more than 100 presentations about advance directives to community groups, hospital staffs, lawyer organizations, and senior citizen groups.

"The medical and legal professions in particular need to be updated and kept informed about changes in this controversial area," she explains. "I think community forums are particularly helpful because they allow patients, doctors, lawyers, judges, and government officials to openly talk about the issue and the problems confronting them."

Dr. Bonner says she cannot emphasize enough the need to sit down and talk with patients about living wills. She adds that a patient's living will should be reviewed periodically because a person's wishes might change as he or she ages. "There needs to be a good understanding of what the physician can offer, and what the patient expects and wants."

"Unfortunately, what I see happening is that as our society becomes more litigious, medicine is becoming more and more regulated," she says. "There's more and more paperwork involved. What's really tragic is we are becoming so regulated to protect people that we physicians forget that our patients are people. As a result, we risk spending more time with pieces of paper—rules and regulations—than with our patients."

Dignity in Life, Dignity in Death

The Pennsylvania Medical Society distributes a patient information brochure on living wills which explains Pennsylvania's Advance Directive for Health Care Act. The publication describes how to prepare a living will, answers related questions, includes a model living will, and provides a wallet card noting that an individual has written a living will.

To obtain a free copy of the Society's brochure, *Dignity in Life, Dignity in Death,* see page 19 of this issue or call the Division of Communications and Public Affairs at (800) 228-7823. The Society will also send you information on how you can order large quantities of the brochure to distribute to your patients.

Telemedicine Brings High Quality Health Care to Rural Pennsylvania

Imagine a patient sitting in a doctor's office in Wayne County, being examined and diagnosed by a physician more than 150 miles away in Hershey. The diagnosis might include the use of brain scans or MR images or even an ultrasound examination. The physicians and patient see each other and talk back and forth using two-way video and auditory exchange. Is this the "Star Wars" of medicine? Technology of the future? Not at all. It's PA HealthNet, the Pennsylvania Rural Health Telecommunications Network, and it's improving the quality of health care right now.

Penn State's Milton S. Hershey Medical Center demonstrated "telemedicine" this summer with an actual patient consultation between a physician from the medical center and a physician at Wayne Memorial Hospital, as well as with a joint news conference with Governor Robert P. Casey.

"While fresh air and pristine surroundings may be the mainstay of rural life, rural residents are not necessarily healthier than their urban counterparts," according to the Pennsylvania Health Department's Behavior Health Risk Report. For many Pennsylvanians living in rural areas, access to medical care—especially specialized care—is a challenge.

A sophisticated telecommunications network developed by the commonwealth and piloted by the Lackawanna County Medical Society, PA HealthNet is being used to provide health care to rural Pennsylvanians, increase access in underserved areas, and help reduce medical costs.

PA HealthNet is a pioneer in the use of telemedicine, teleradiology, and desktop medical conferencing to:

- conduct remote exams, evaluations, and consultations;
- exchange patient information;
- provide access to continuing medical education; and
- promote communication between rural practitioners and their urban center counterparts.

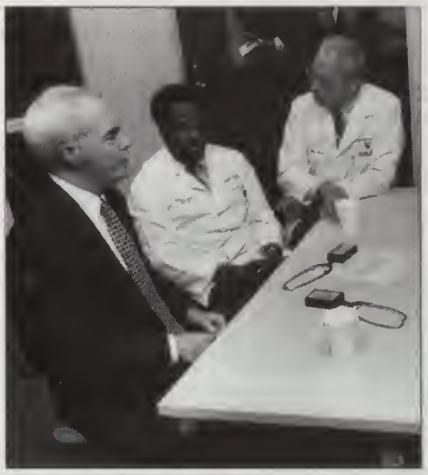

Photo courtesy of Penn State's Milton S. Hershey Medicol Center

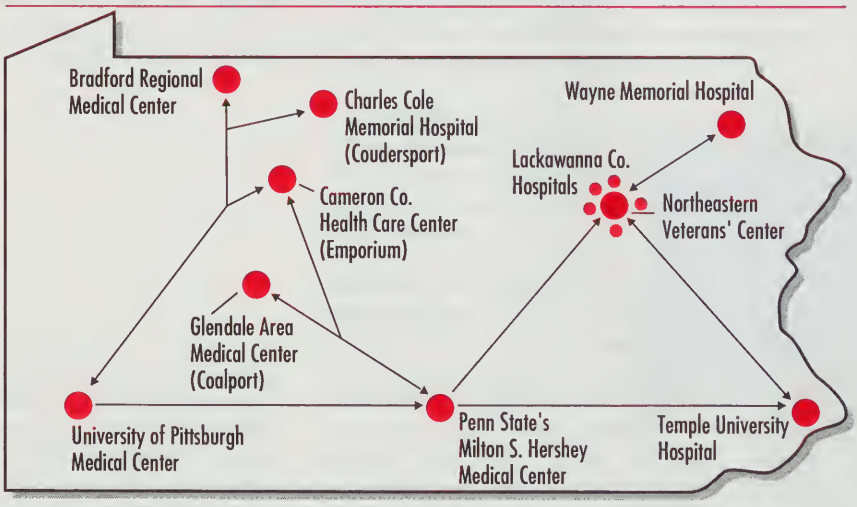
Governor Robert P. Casey (left) was given a demonstration of telemedicine this summer at Penn State's Milton S. Hershey Medical Center, by Harold Harvey, MD (center), professor of medicine, and C. McCollister Evarts, MD (right), senior vice president for health affairs and dean of the College of Medicine. Dr. Harvey consulted long distance via PA HealthNet with Marcellus Walker, MD, a physician at Wayne Memorial Hospital, Honesdale.

Pennsylvania has the only state government that has taken the lead in this area of information technology by providing participating hospitals with equipment, and technical and administrative staff support, as well as the telecommunications network. To date, nine telemedicine sites are in place in the commonwealth (see map at left).

PA HealthNet Network



Source: Governor's Office of Administration, Bureou of Automated Technology Monagement

Telemedicine systems are now in place in nine sites across the commonwealth as part of the PA HealthNet project to enhance the quality of health care in rural Pennsylvania by providing a telecommunications link to urban medical centers. The first telemedicine consultations were conducted in January 1994 between Wayne Memorial Hospital and physicians in Scranton.

PHYSICIANS SAY VIOLENCE IS A GROWING CONCERN

Family and societal violence is a growing concern to physicians, according to the State Society's 1994 Membership/Leadership Poll. In last year's poll, members and leaders ranked violence tenth in importance among public health and policy issues; this year, violence was ranked third, behind health care costs and access to care.

The Membership/Leadership Poll is commissioned annually by the Society's Communications Division to:

- determine physicians' opinions of the Society's current activities;
- learn how the Society can better serve its membership;
- identify physicians' practice, public health, and policy priorities; and

• compare physicians' views on various bioethical issues to the results of previous polls.

Reform is priority

Not surprisingly, this year's poll results show that the changes in the health care system and what the Society is doing to represent physicians are most important to respondents. When asked how the Society can serve physicians more meaningfully, and what the Society's priorities should be, physicians overwhelmingly agreed: "Be a strong voice for physicians in health system reform discussions."

Health system reform also topped the list of practice issues of importance to physicians, followed by outside regulation of the practice of medicine, medical malpractice issues, and managed care. Further, more than 84 percent of respondents agreed that patients should be allowed to choose health benefits to fit their needs, rather than being bound to the same health benefit package.

Public health/policy issues

Physicians were also asked to rank the three most important public health and policy issues which the Society should address on behalf of all physicians. As noted, the top three issues were: 1) health care costs, 2) access to health care, and 3) family and societal violence.

Other issues noted include: substance abuse, smoking, child and maternal health, issues surrounding AIDS, bioethical issues, air/water quality, and tuberculosis.

In addition to the rise in concern over violence, the most notable change has been a drop in ranking for "issues surrounding AIDS," which moved from third to seventh since 1992.

The 1994 survey was conducted for the State Society by The Educational and Scientific Trust.

PENNSYLVANIA MEDICINE Recognized for Anti-Substance Abuse Efforts

Governor Robert P. Casey, Attorney General Ernie Preate Jr., and Robert M. Valentini, chairman of the Foundation for a Drug-Free Pennsylvania, recognized 333 media statewide—including PENNSYLVANIA MEDICINE—with a certificate of membership and appreciation for participation in the foundation's Media Partnership, an anti-substance abuse public service announcement campaign.

The foundation estimates that in the Media Partnership's first year, partners donated air time and print space for over 72,000 anti-substance abuse messages valued at $2.2 million. PENNSYLVANIA MEDICINE's most recent effort was an article in the June 1994 issue (page 33) about the foundation's newest program, "Drugs Don't Work Here," which seeks to help employers and labor organizations address drug and alcohol abuse in the workplace.

The Media Partnership was launched in March 1993 with the goal of reaching every community—large, small, urban, suburban, rural—in the commonwealth.

COUNTY NEWS

PHILADELPHIA INSTALLS 133RD PRESIDENT

The Philadelphia County Medical Society this summer installed Thomas G. Gabuzda, MD, associate member of the Cardeza Foundation for Hematologic Research at Jefferson Medical College of Thomas Jefferson University, as its 133rd president.

A native Pennsylvanian, Dr. Gabuzda earned his medical degree from Harvard Medical School. Following an internship and residency at Massachusetts General Hospital, Boston, he served for two years as a captain in the U.S. Air Force, stationed in West Germany. He took research training in hematology in Copenhagen, Denmark, before returning to the U.S.

Dr. Gabuzda is certified by the American Board of Internal Medicine in hematology and in medical oncology. His hospital appointments include chief of hematology, Lankenau Hospital, Wynnewood, and associate staff, Thomas Jefferson University. He also is professor of medicine at Jefferson Medical College.

At the county society, Dr. Gabuzda has been active since 1970 on a number of committees, and he has been a member of its board since 1989. At the State Society, he has served on the Task Force on AIDS and the Commission on Bioethics.

DR. FISHER ELECTED DAUPHIN COUNTY PRESIDENT

Todd Richard Fisher, MD, Hummelstown, has been elected the 130th president of the Dauphin County Medical Society, succeeding Virginia Hall, MD.

Born in Harrisburg and raised in the midwest, Dr. Fisher is a graduate of Muhlenberg College, Allentown, and Penn State's College of Medicine, Hershey. He completed his residency work at Harrisburg Hospital, where he now serves on active staff, and is affiliated with the Family Medicine Center, Middletown. He is board certified in family practice. →

Naples, Florida 33940

800-867-4888

Dr. Fisher joined organized medicine as a medical student in the mid-80s and is a delegate to the State Society. In the community, he is one of two physicians serving the Middletown School District and is team physician for the school's football team. Also, he is involved in a mentoring-type program with medical students from Penn State's College of Medicine.

Bob McAfee, MD, president of the AMA, was the guest speaker at Dr. Fisher's inauguration. This month, the county society is planning a joint meeting with the Dauphin County Bar Association to discuss health system reform and malpractice reform.

MONTGOMERY COUNTY HONORS RETIRING EXEC

The Montgomery County Medical Society (MCMS) on September 18 held a farewell dinner in honor of U. Berkley Ellis, EdD, its retired executive director.

"Berk has made an enormous contribution to our society," said MCMS President Charles Cutler, MD. "His effort has been tireless. His organizational skills allow the medical society to function as smoothly as it does."

A graduate of West Chester State College and a former school superintendent, Dr. Ellis came to the county society in 1981—the beginning of the "Era of Satisfaction," according to H. Craig Bell, MD, editor of MCMS's *Medical Bulletin*.

"Berk found ways to satisfy the not always reasonable demands, ran a tight ship from a financial standpoint, and hauled MCMS into positions of political power, making our members realize that being the third largest medical group in the state brought clout," Dr. Bell wrote in the September issue of the county journal. "Berk did what was best for the society."

MCMS names new exec

Assuming the role of executive director of the county society is James N. Holton, EdD, a Norristown native and retired school administrator.

Dr. Holton received his bachelor's degree from the University of Michigan and spent two years as an educational specialist in the U.S. Marine Corps, before earning master's and doctorate degrees from Columbia University. He spent 32 years in education, working his way up from teacher and counselor to superintendent. He began his new responsibilities with MCMS at the end of August.

RPS NEWS

COMMUNITY SERVICE RECOGNIZED BY AMA

Two Pennsylvania resident physicians were recognized in June by the American Medical Association for their contributions to community service.

Sarah R. Linde-Feucht, MD, a resident at Lancaster General Hospital, was honored for coordinating in 1993 the 100 Mile Club, a walking and exercise program created for the largely indigent patients of the Family Health Service at Lancaster General Hospital. She also served on the advisory board of Vantage House, a six-month residential program designed to rehabilitate women addicted to drugs and alcohol, and she participates in a program that educates elementary school children about the harmful effects of alcohol.

Dr. Linde-Feucht

J. Lynne Garrison, MD, a resident at the University of Pittsburgh, was honored for her many volunteer activities while in medical school, including serving as an emergency medical technician on the county rescue squad, working in a student-run indigent care clinic, and teaching atherosclerosis prevention to junior high school students. As a resident physician in plastic surgery, she recently worked with a volunteer team of plastic surgeons for two weeks in Vietnam, performing operations and teaching conferences.

Dr. Garrison

Drs. Linde-Feucht and Garrison were two of 40 honorees of the AMA/Burroughs Wellcome Co. Leadership Award Program for resident physicians, which was established in 1988. Awardees attended the AMA Resident Physician Section Annual Meeting in Chicago in June and will have the opportunity to attend the AMA Interim Meeting in Hawaii in December. Also, Drs. Linde-Feucht and Garrison will be invited to sit with the Resident Physician Section caucus at the State Society's annual meeting in Hershey this month.

STATE RECEIVES RWJF PRIMARY CARE GRANT

The Robert Wood Johnson Foundation (RWJF) has awarded nearly $8 million to groups in 10 states—including almost $875,000 to the Pennsylvania Department of Health—to help medically underserved communities recruit primary care health professionals.

The grants are part of the foundation's "Practice Sites: State Primary Care Development Strategies" program, which seeks to help states improve in four critical areas: primary care needs assessment, provider recruitment, provider retention, and financing and policy changes.

According to State Health Secretary Allan S. Noonan, MD, Pennsylvania will use the funds to recruit mid-level practitioners, establish a clearinghouse to match those practitioners with communities, and expand the state's ability to help communities end shortages of primary care providers.

Last year, RWJF awarded the department $100,000—the first phase of the Practice Sites grant—to support the state's comprehensive Primary Health Care Practitioner Program, which includes:

- the designation of shortage areas and matching those areas with available practitioners,
- grants to medical schools and mid-level practitioners' educational programs,
- repayment of medical education loans for professionals who practice in medically underserved communities,
- the governor's School of Excellence in Health Professions for high school students interested in pursuing health and medical careers,

• HealthNet, a rural telemedicine communications system (see page 30), and

• the establishment of area health education centers.

As reported earlier in the year, John A. Malcolm Jr., MD, a Sunbury pathologist, represents State Society physicians on the state's Practice Sites Steering Committee.

TRUST SEMINAR OFFERS RETIREMENT STRATEGIES

Where can a physician receive objective, unbiased financial information, but at the same time not be subject to a pitch man? The State Society's Educational and Scientific Trust recognized the need for this service and is responding by sponsoring a day-long financial planning seminar for physicians and their spouses.

The seminar will be held on Saturday, October 29, at State Society headquarters in Harrisburg, from 9:00 a.m. to 4:00 p.m. The presenter is Ronald J. Paprocki, JD, CFP, vice president, AMA Investment Advisers, LP, an affiliate of the American Medical Association.

Among the strategies attendees will learn are: how to dodge the killer taxes, how to survive inflation, how to engage in safe risk, how much insurance is enough, and how some giving gives back.

To register, call the Trust at (800) 228-7823, ext. 416. The national registration fee for this seminar is $99, but the Trust has made special arrangements with AMA Investment Advisers and is offering it for $59, which includes the workbook and lunch. Physicians are encouraged to bring their spouses at no extra charge. *Registration deadline is October 15.*

NEW DATA BANK RESPONSE OPTION AVAILABLE

Physicians may now respond to any National Practitioner Data Bank report filed against them without going through a formal dispute process, the data bank recently announced.

When the data bank receives a report of an adverse action against a physician, it sends a "Practitioner Notification Document" to the named physician. In the past, the physician would have had to institute formal dispute proceedings to get his or her side of the story on file. Now, a physician may add a statement—up to 600 characters—on the back of the notification, amending the report without activating the dispute process.

The statement is then entered by the data bank, immediately becoming a permanent part of the report, and will accompany the report when released to any approved querying entity. Formal dispute is still an option; however, the new procedure gives physicians more options than previously available.

Excerpted with permission from "Patient Rx Newsletter," September 1994, published by the Pennsylvania Medical Society Liability Insurance Company.

PHILADELPHIA TRAUMA PROGRAMS INTEGRATE

Hahnemann University Hospital and the Medical College of Pennsylvania Hospital have announced the integration of their trauma programs. Under the new arrangement, each hospital will maintain its separate trauma center, but the administration will be combined.

One product of the integration is a new program creating links with Philadelphia-area community hospitals. Referring hospitals will have access to both trauma centers, with bed availability for all trauma transfers. Referring physicians can access immediate consultation on complex emergencies, surgical critical care, and trauma cases through a toll-free trauma hotline, staffed 24 hours a day by an attending trauma surgeon.

Hospitals Receive "Accreditation with Commendation"

Twenty-three Pennsylvania hospitals received "Accreditation with Commendation" from the Joint Commission on Accreditation of Healthcare Organizations for the period January 1, 1991, through December 31, 1993.

The commission accredits approximately 80 percent of the nation's hospitals—nearly 5,300—which account for more than 95 percent of inpatient days in the United States. Accreditation with Commendation—awarded to approximately five percent of hospitals surveyed since the category was established in 1991—recognizes a hospital's exemplary performance in such areas as quality improvement, patient rights, medication use, practitioner credentialing, safety, and organization management. To earn and maintain accreditation, a hospital must undergo an on-site survey by an experienced Joint Commission survey team every three years.

Pennsylvania hospitals receiving the commission's most distinguished accreditation award include:

Abington Memorial Hospital

Bloomsburg Hospital

Bryn Mawr Rehabilitation Hospital, Malvern

Chambersburg Hospital

Chestnut Hill Hospital, Philadelphia

Danville State Hospital

First Hospital Wyoming Valley, Wilkes-Barre

Fox Chase Cancer Center, Philadelphia

Geisinger Wyoming Valley Medical Center, Wilkes-Barre

Germantown Hospital and Medical Center, Philadelphia

Greater Pittsburgh Rehabilitation Hospital, Monroeville

Jefferson Health Services, Pittsburgh

Lake Erie Institute of Rehabilitation

Latrobe Area Hospital

Magee Rehabilitation Hospital, Philadelphia

Meadows Psychiatric Center, Centre Hall

Moses Taylor Hospital, Scranton

Muhlenberg Hospital Center, Bethlehem

Naval Medical Clinic, Philadelphia

Ohio Valley General Hospital, McKees Rocks

Philhaven Hospital, Mt. Gretna

Shriners Hospitals for Crippled Children, Erie

Wilkes-Barre General Hospital

DUR Program Moving Ahead in Second Year

Think of it as a three-stranded braid, wrapped by a fourth strand that holds it all together. "It" is the state's mandated drug utilization review (DUR) program for Medical Assistance (Medicaid) patients. The "braid" includes the three aspects of the program—intertwined, but distinct and separate. The individual strands include prospective DUR, patient counseling, and retrospective review. The strand that wraps around these three activities is the DUR Advisory Board.

In July 1993, PENNSYLVANIA MEDICINE published an article about a unique aspect of the program—the fact that the Pennsylvania Medical Society had sought and been awarded the Department of Public Welfare (DPW) contract for the retrospective DUR strand of the program. The Society is the only state medical organization in the country to hold such a contract.

Over the last year, the Society has been very active in developing an educational program for physicians, including drug information charts included on this page throughout the year. At the same time, DPW has been moving ahead with regard to the other two strands of the program.

This update is designed to provide information about the status of all three aspects of the Medicaid DUR program.

Background

The Medicaid DUR program was mandated under the federal Omnibus Budget Reconciliation Act (OBRA) of 1990, which required all states to develop multi-faceted programs to monitor outpatient medications for Medicaid patients.

The law stipulated that this program be designed to ensure that prescriptions are appropriate, medically necessary, and not likely to result in adverse medical outcomes. Federal legislators believe such review is useful in improving the quality of patient care and containing government health care expenditures.

While the State Society holds only one contract for this program—the one for retrospective review and education—the Society continues to monitor all aspects of the program as part of its ongoing activities with respect to state programs affecting the medical community.

Prospective review

Nearly every pharmacy in Pennsylvania has now been phased into the electronic claims management system introduced by DPW in June 1993. This first strand of the Medicare DUR program is administered by Electronic Data Systems (EDS), under contract with DPW.

One of the most challenging aspects of this program is the need to distinguish it clearly from the Prescription Assistance Contract for the Elderly (PACE) program of the Pennsylvania Department of Aging.

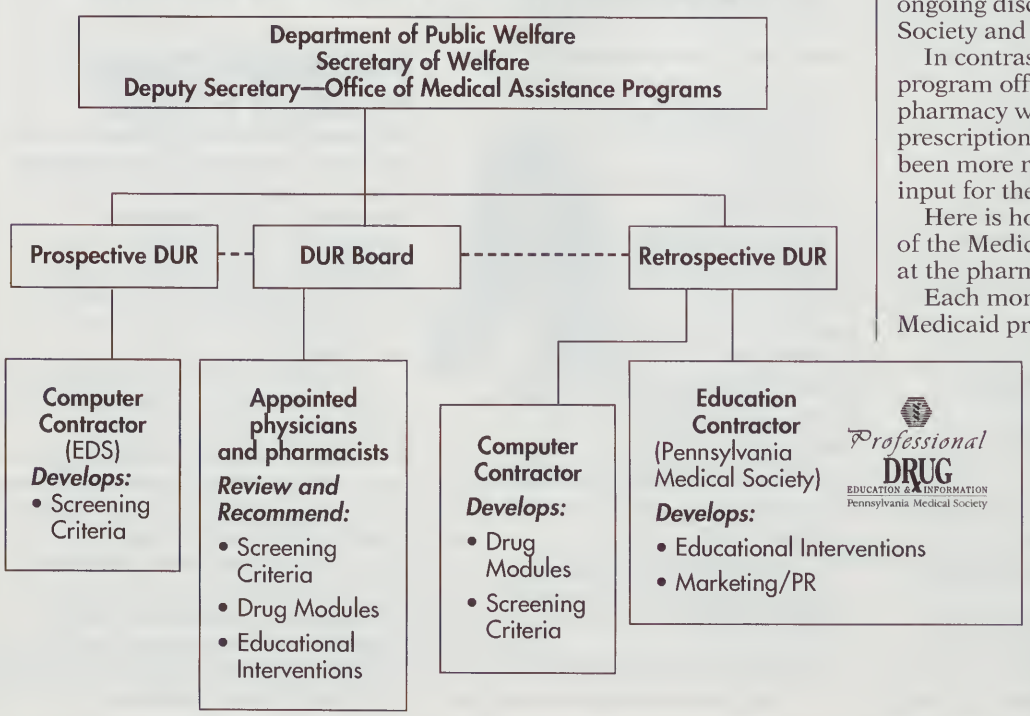
The PACE program, which sets strict parameters on physician prescribing and offers no flexibility to pharmacists in the handling of prescriptions, is the subject of ongoing discussions between the Society and the Department of Aging.

In contrast, the Medicaid DUR program offers flexibility at the pharmacy where a Medicaid prescription is filled. DPW also has been more receptive to physician input for the Medicaid program.

Here is how the prospective review of the Medicaid DUR program works at the pharmacy level:

Each month, thousands of Medicaid prescriptions undergo review through the electronic claims management system. Each time a Medicaid patient has a prescription filled, the pharmacist checks that patient's personal prescription history through the DPW computer network. At that time, an "alert" may be issued by the system for any of a number of

Implementation of OBRA '90 DUR Requirements



reasons, including drug-drug interaction, low dosage, high dosage, early refill, age precaution, pregnancy precaution, or therapeutic duplication. The pharmacist may choose not to fill the prescription, may override the alert on his or her own authority, or may consult with the prescribing physician.

In August, for example, 61,392 of more than 200,000 prescriptions flagged during prospective review were filled by pharmacists after consulting with the prescribing physician. By category, the breakdown was: 24,624 overrides for therapeutic duplication; 13,920 for low dosage; 10,284 for early refill; 7,854 for high dose; 4,640 for drug-drug interaction; 61 for age precaution; and nine for pregnancy precaution.

To reduce the number of false-positives, DPW is making further refinements to the conditions that cause an alert.

Counseling by the pharmacist

Another important provision of the Medicaid DUR statute has to do with the person-to-person contact between the pharmacist and the Medicaid patient.

The pharmacist is required to offer what has been called "counseling" to every Medicaid patient seeking to fill a prescription, regardless of whether that prescription has prompted an alert on the electronic claims management system.

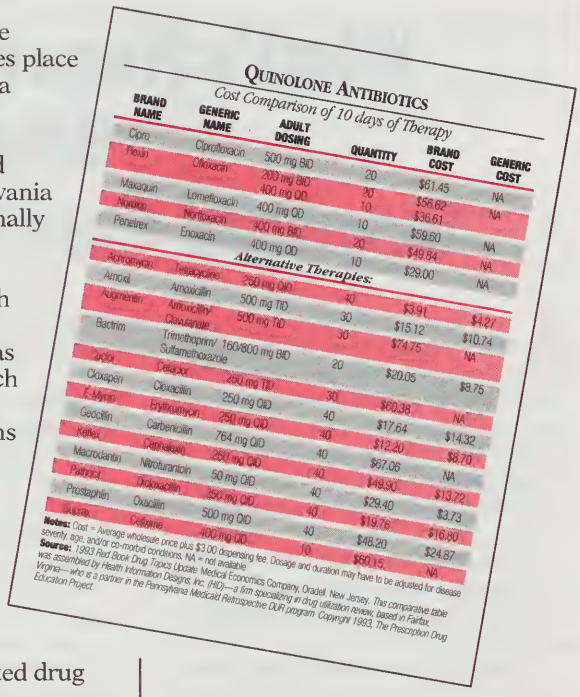
The law says that a pharmacist "must offer to discuss" aspects of the medication or related issues that "in the exercise of the pharmacist's professional judgment," the pharmacist considers "significant." These might include name and description of the medication; administration, form, and duration of therapy; special directions or precautions for use; common severe side effects or interactions, therapeutic interactions, and how to avoid such occurrences; storage; and refill information.

Retrospective review

This component of the program is administered by the Pennsylvania Medical Society's Center for Professional Drug Education and Information. It is important to emphasize that the center's work is educational and non-punitive in nature, and is not tied to the prospective review that takes place at the pharmacy each time a Medicaid patient has a prescription filled.

Center staff have traveled widely throughout Pennsylvania during the past year, personally describing the goals of retrospective review to hundreds of commonwealth physicians.

In addition, the center has conducted intensive research to determine how best to serve the needs of physicians with the educational program. In response to results from surveys and focus groups, the center is producing a series of charts and pocket cards (see sample, at right) comparing costs of prescription drugs by selected drug classes.



QUINOLONE ANTIBIOTICS

Cost Comparison of 10 days of Therapy

BRAND NAME	GENERIC NAME	ADULT DOSING	QUANTITY	BRAND COST	GENERIC COST
Cipro	Ciprofloxacin	500 mg BID	20	$61.45	NA

(HID)—a firm specializing in drug utilization review, based in Fairfax, Virginia—who is a partner in the Pennsylvania Medicaid Retrospective DUR program. Copyright 1993, The Prescription Drug Education Project.

The center has added a pharmacist, Brenda Trimmer, RPh, to its staff. A profile in next month's issue of PENNSYLVANIA MEDICINE will outline her role in the Society's activities.

For more information about the Center for Drug Education and Information, contact Barbara Layne at (800) 228-7823.

The wrapping strand

The DUR Advisory Board, also mandated by federal law, is the newest aspect of the Medicaid DUR program. Richard D. Baltz, MD, of Camp Hill, represents the Society on the board, which had its first meeting in June.

The Health Care Financing Administration (HCFA) has been encouraging DPW to consider adding an "alert" for dosages of ulcer drugs in the classification of histamine H_2-receptor antagonists (or H_2 antagonists). This classification includes the brand names Tagamet, Zantac, Pepcid, and Axid. Manufacturers recommend a full dosage for a limited period, followed by reduced dosage as maintenance therapy. This matter was discussed by the board; DPW says it has not yet made a decision about implementing a screening program for these drugs and is proceeding cautiously.

For more information about the State Society's monitoring of the prospective review program and the DUR Advisory Board, contact Jeff Greenawalt at (800) 228-7823.

Barbara A. Layne, the Society's director of professional drug education and information, and Sandra L. Oravec, director of member communications, contributed to this article.

Society Commitment

The State Society has made a series of commitments with regard to the retrospective program. These include:

- to respect the medical judgment of individual physicians,
- to offer continuing education on prescribing standards and practice, and
- to refrain from any activities that could be construed as punitive in nature.

What's Negotiable and What Isn't in Managed Care Contracts

The Health Care Group

Any day now, if it hasn't already, a managed care contract will cross your desk. Whether you're unsure about joining a managed care organization, or whether you've decided the time is right to become a managed care physician, don't sign the contract until you've read and understood everything in it. After you're done reading the contract, ask an attorney experienced in the intricacies and nuances of managed care to review it for you.

Invariably, some provisions in the contract will leave you less than enthusiastic. You may be wondering if you can negotiate a managed care contract. The answer is a resounding yes. The managed care company may not want to change some provisions, but you should always attempt to negotiate those provisions you have any concern about.

Contract provisions that may need to be changed include:

Automatic renewal

This is a standard feature of most managed care contracts. Make certain that renegotiation takes place at least 180 days before the end of the term. This allows you time to review any changes, such as increased memberships, fee changes, or an expanded service area.

Capacity requirements

You may not be able to negotiate this provision, but it's definitely worth trying, or you may be forced to accept unlimited numbers of new patients. Try to include a provision that allows you to say the practice is full to one managed care plan, without requiring the practice to be closed to all managed care plans.

Contract not assignable

Never sign a contract that allows a health plan to assign the physician portion of the agreement to a third party without the physician having the right of prior review and approval of that third party's operations, finances, ownership, etc. This is *absolutely essential.*

Eligibility

Here's another contract provision that's difficult to change, but again, is negotiable. Most plans make it the physician's responsibility to check and verify eligibility every time a member presents for service, and often retain the right to refuse payment or to retroactively take back payments for services if eligibility is not verified.

However, just verifying eligibility does not guarantee payment. Health plans may confirm eligibility, then later determine that the confirmation was in error and withhold or take back payment after services have been delivered. Also, the health plan may conclude that the patient knew when he or she presented that he or she was not eligible and obtained services fraudulently. In this case, it is up to you to bill the patients for services.

Attempt to negotiate a provision that guarantees payment for services rendered in good faith to patients who are later determined to be not eligible, if you follow the proper eligibility verification protocols, and the managed care company gives you incorrect information. Some payers will agree to reimburse physicians who have made a good-faith effort to bill and collect directly from the patient. Usually, two attempts are considered adequate.

Exclusivity

There are two types of exclusivity. In one, the health plan contracts exclusively with a physician or physician group for all members; in the other, the physician agrees to contract exclusively with the health plan and not to service any other managed care memberships. Be very wary of the latter form of exclusivity—tying a practice's survival to a single managed care payer. If you do, insist on being paid a premium for closing your practice to all other managed care plans.

Hold harmless

There are two different sections usually found under this heading. One provision provides that a physician must agree not to bill the member for covered services, other than any applicable copayments or deductibles.

Under the other type of hold harmless provision, a physician is often asked to hold harmless or indemnify the health plan for certain actions. If such language is not negotiated out, you could be subject to litigation for circumstances and acts beyond your control, such as actions of other physicians that directly affect how you are allowed to manage the case. And, malpractice insurance may not protect you.

Incorporated by reference

Often, the contract will say something similar to "...as set forth in the 'Evidence of Coverage' and incorporated by reference and attached as Exhibit 'X.' " It is vital that you read and understand all referenced documents. These should also be physically attached to the contract before signing it.

On-call availability

The agreement should carefully spell out any on-call responsibilities. Make certain you can meet the requirements or supply adequate coverage. Pay particular attention to coverage requirements when you are not available. The agreement may not allow the physician to choose other physicians unless they also have a contract with the plan.

Finally, make certain you are only responsible to provide services within the service area. This holds true for provisions that discuss out-of-area coverage. Also, make sure you are not financially responsible for out-of-area coverage.

Open-ended provisions

Some managed care contracts contain indefinite wording, such as "from time to time," concerning changing contract provisions. Negotiate out any such language. If the managed care plan insists on it, try to negotiate a favorable, no-penalty "out" clause, allowing quick and simple termination if the health plan implements an unacceptable change. Also, require advance written notice of any proposed changes.

Time of payment

Make certain the contract specifies precise timing for payment and contains a provision that physicians be paid interest on late payments. Be specific about payment dates, and negotiate out any wording that allows the payer an opportunity to withhold or delay payments.

For instance, wording such as "The plan will use its best efforts to pay all claims within 30 days of submission," allows the plan to say that it did use its best efforts and list a variety of excuses, real or imagined, for late payment.

Unilateral contract changes

Some contracts allow the plan to change certain terms or conditions. Don't sign a contract that lets the managed care company change the terms without your prior approval. All changes to the agreement should be mutually agreed upon and signed in writing. If the managed care company will not agree to this provision, you should negotiate the right to immediate withdrawal from the contract if you don't agree with the changes made by the managed care company.

Withholds

This is the amount the payer reserves to cover unexpected expenses. Negotiate with the payer to specify exactly how and under what conditions any such reserves should be distributed. The agreement should also specify if the withholds are the limit of each physician's risk or if the physician can be held responsible for losses in excess of the withhold. If the latter is the case, make sure the contract limits the physicians' financial responsibility.

Wrongful denial of care

This provision is a companion to the hold harmless agreement. You must negotiate out any provisions that shift the liability of wrongful denial of care from the plan to the physician.

Remember, never sign a contract that includes provisions you cannot or will not agree to. Although managed care companies may want you to think contracts are written in stone, negotiation is definitely possible and may be necessary to protect your interests.

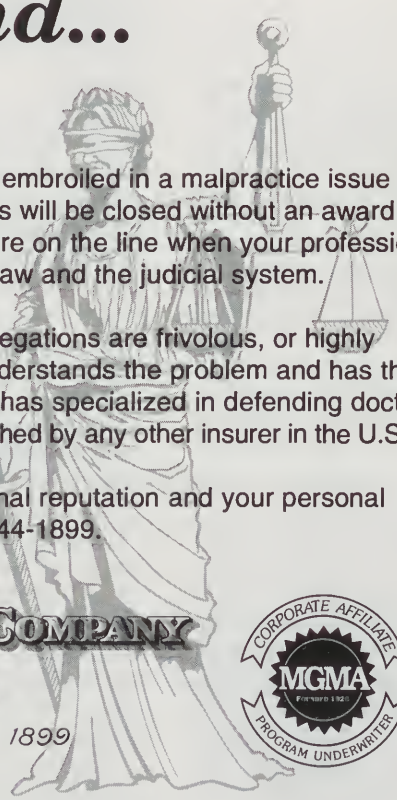
...a promise to defend...



HERE ARE THE FACTS: Over 25% of America's Physicians were embroiled in a malpractice issue in the last 12 months. More than 80% of those malpractice allegations will be closed without an award for damages. Your professional reputation and your personal assets are on the line when your professional liability carrier is not both financially sound *and* experienced in the law and the judicial system.

WHEN THE ISSUES ARE LEGAL, NOT MEDICAL — when the allegations are frivolous, or highly emotional — you need a company and legal representation that understands the problem and has the experience to resolve the issue. The Medical Protective Company has specialized in defending doctors since 1899. Our legal and claims management experience is unmatched by any other insurer in the U.S.

FOR MORE INFORMATION on how we can protect your professional reputation and your personal assets, call your local Medical Protective General Agent at 1-800-344-1899.

How to Avoid Getting Kicked by the Media Donkey

David Woods

Being prepared for the media interview will save physicians from embarassment and reverberations after the fact.

After losing the election for governor of California, Richard Nixon told members of the press that they "wouldn't have Nixon to kick around anymore." Well, as we know, they did. But physicians can avoid being kicked by the media donkey if they understand this creature and learn how to treat it with firmness and respect.

First of all, remember that the donkey thinks it's a thoroughbred racehorse and wants everyone to admire it for its fine breeding, configuration, and form. The media want to attract the attention of readers, listeners, and advertisers. Understanding that will help you get through the interview process unscathed.

Increasingly, reporters from the ranks of both print and electronic journalism are seeking out physicians to comment on aspects of health care—both clinical and, more often these days, sociopolitical. How to remain unscathed—or unkicked?

Be prepared. Nothing causes readers to turn the page or listeners/ viewers to switch stations more than dry, rambling responses. You are, after all, the expert. But being the expert isn't enough. Attention spans are contracting while sources of information are expanding, so you should have a very clear idea—in advance of the interview—of the message you want to convey.

Be wary. Ill-considered, off-the-cuff remarks can be ruinous. Keep in mind the absolute finality of the printed or broadcast word. Don't be like the physician who mused, on air, about the desirability of sterilizing all welfare mothers with two or more children. He lived to regret the comment for the rest of his rather foreshortened career in medical politics.

Wariness should extend to realizing that the donkey doesn't only kick defensively; it may do so pre-emptively—even capriciously. What I mean is that *Time* magazine, in its earlier incarnations, would describe an interviewee it didn't like as, say, "portly and aging." It once used those adjectives about a politician who protested to no avail that he was five-foot-nine, weighed 163 pounds, and was in his 50s. Oh, well.

Be clear. Remember that the educational levels of those to whom your message is beamed differ...unless you're being interviewed in a scientific journal. So, no polysyllabic words, arcane references, or medical jargon.

> ***"Physicians can avoid being kicked by the media donkey if they understand this creature and learn how to treat it with firmness and respect."***

Be patient. Interviewers serve as intermediaries between the expert and the audience; they need your help and understanding in order to interpret and present facts.

Be humble. If you don't know the answer, admit it. Far better to acknowledge ignorance cheerfully and openly, than to prove it by hedging and waffling.

Be cool. Aggressive interviewers, or those with particular axes to grind, should not be allowed to wear you down; nor should those who pose the same question in several different ways. Say something like, "A more useful question might be..." rather than, "That's a really silly question."

To avoid the media donkey's kick, understand the creature, be firm, make your intent clear, be confident but wary—and humble enough to know that it is bigger than you.

Media Training Available

Both the Pennsylvania Medical Society and the American Medical Association offer media training for groups and individuals who would like to brush up on their interviewing skills or would like to learn basic techniques. Videotaping can also be included in the training.

For more information, call Amy Dugan, the State Society's director of media relations, at (800) 228-7823 or (717) 558-7750, or Pat Clark at the AMA at (312) 464-4497. The AMA charges expenses.

Mr. Woods, former editor and publisher of the* Canadian Medical Association Journal, *is president of Healthcare Media International, Inc., Philadelphia, and a frequent commentator on health care issues.

REGISTRATION INFORMATION

- *Call for Reservation materials (717) 290-4500*
- *No Program Fee*
- *5 Category I CME Credits*

Accreditation Statement

Temple University School of Medicine is accredited by the Accreditation Council for Continuing Medical Education (ACCME) to sponsor Continuing Medical Education for physicians.

Certification Statement

Temple University School of Medicine designates this CME activity for one credit hour specified in Category I of the Physicians Recognition Award of the AMA.

Credit will be awarded to those physicians who sign and return the program evaluation form

Disclosure Policy Statement

It is the policy of Temple University School of Medicine, Office for Continuing Medical Education to insure balance, independence, objectivity and scientific rigor in all its sponsored or jointly sponsored educational programs. All faculty participating in sponsored or jointly sponsored programs by Temple University School of Medicine are expected to disclose to the program audiences any real or apparent conflict(s) of interest related to the content of their presentation(s).

LANCASTER GENERAL

Jointly sponsored by:

Workers' Comp Review: How It's Done

Donald E. Harrop, MD

Initial requests for review of particular workers' compensation cases are sent directly to the Bureau of Workers' Compensation by the employee, employer, or insurer. The bureau then sends them to the utilization review organizations (UROs) by random selection, depending upon the types of review the URO is qualified to perform. Therefore, cases for review may come from any and all workers' comp carriers in the state. This eliminates the possibility of the carrier selecting the URO of its choice and setting any kind of quota or expected denial rate. Of course, the URO must be qualified to do the type of review the particular case in question requires. KePRO is considered qualified to do any kind of specialty review.

Once the URO receives a notice from the bureau identifying the case that requires review, it is up to the URO to request the medical record from the specialist who provided the service, and in some cases, the referring physician. Thirty days are allowed for receipt of the record; if it is not sent, the services in question will be denied according to bureau process.

Upon receipt of the record, the provider is given the opportunity to discuss the treatment plan with a Keystone Peer Review Organization reviewer. The reviewer then renders a decision concerning the reasonableness and/or necessity of the treatment provided. All involved parties may then request a reconsideration of the decision.

In the Medicare process, another level of review would take place before a reconsideration is scheduled. If a reconsideration of a workers' comp case is requested, it is sent directly to the bureau, which then reassigns the case to the URO which performed the initial review. A different reviewer will be utilized to perform the reconsideration review.

As in the Medicare program, the patient is not held liable for payment and cannot be billed for denied services. The one exception would be if the injury/illness is determined by an administrative law judge to be other than employment related.

It will be interesting to see if the Workers' Compensation Act (Act 44 of 1993) has helped resolve some of the problems with workers' comp that we have heard about for the past few years. We hope the Insurance Department or the bureau will soon publish statistics to indicate if the program is working and if workers' comp premiums may be reduced.

Dr. Harrop is president of the Keystone Peer Review Organization.

We'll help you put something unusually strong in your prescriptions.

Complete confidence.

Confidence. Your patients have it in you, but do you have it in the prescription drug information you currently receive?

The Pennsylvania Medical Society recognizes that you need an unbiased, credible source of drug information. That's why we developed the Center for Professional Drug Education and Information. Established for physicians based on recommendations by physicians, the Center offers you a resource on prescription drugs you can trust.

Prevention and Treatment of Abnormalities of Thrombosis in Cardiovascular Disease
Guest Lecturers:
Thomas W. Meade, D.M., F.R.C.P. and Yale Nemerson, M.D.

Seminar Director: Allan B. Schwartz, M.D., Professor and Vice Chair, Chief of Service, Director of Continuing Medical Education for the Department of Medicine

Full Disclosure Statement: All faculty participants in continuing medical education programs sponsored by Hahnemann University are expected to disclose to the audience any real or apparent conflict(s) of interest related to the content of their presentation.

Statement of Accreditation: Hahnemann University is accredited by the Accreditation Council for Continuing Medical Education (ACCME) to sponsor continuing medical education programs for physicians. Hahnemann University designates each hour of attendance at these activities as 1 credit hour of Category 1 of the Physician's Recognition Award of the American Medical Association.

OBITUARIES

Don L. Bashline, MD, *Grove City*
Temple University School of Medicine, 1943; age 75, died July 12, 1994. Dr. Bashline was a general surgeon.•

Felix Dionisio, MD, *Philadelphia*
University of Santo Domingo, Dominican Republic, 1967; age 53, died July 14, 1994. Dr. Dionisio was a general practitioner.•

Donald H. Haselhuhn, MD, *Camp Hill*
Tufts University School of Medicine, Massachusetts, 1940; age 80, died August 8, 1994. Dr. Haselhuhn was an anesthesiologist.•

Henry T. Kleiner, MD, *Philadelphia*
Hahnemann University School of Medicine, 1949; age 72, died July 10, 1994. Dr. Kleiner was a psychoanalyst.•

Wayne O. McKee, MD, *Beaver*
Hahnemann University School of Medicine, 1943; age 76, died July 12, 1994. Dr. McKee was a general surgeon.•

Alexander S. Vujan, MD, *Venice, FL*
University of Pittsburgh School of Medicine, 1941; age 78, died June 7, 1994. Dr. Vujan was a psychiatrist.•

William H. Walters, MD, *Pottsville*
Hahnemann University School of Medicine, 1945; age 74, died July 17, 1994. Dr. Walters was a general practitioner.•

C. William Weisser, MD, *Pittsburgh*
University of Pennsylvania School of Medicine, 1935; age 84, died April 16, 1994. Dr. Weisser was an ophthalmologist.•

David K. Zierdt, MD, *Carlisle*
University of Pennsylvania School of Medicine, 1960; age 64, died July 6, 1994. Dr. Zierdt was a urologist.•

William D. Allison, MD, *Ardmore*
Temple University School of Medicine, 1950; age 70, died June 20, 1994. Dr. Allison specialized in cardiovascular diseases.

William J. Elwell Jr., MD, *Blue Bell*
Hahnemann University School of Medicine, 1945; age 75, died June 28, 1994. Dr. Elwell was a radiologist.

Harold B. Furman, MD, *Wayne*
Jefferson Medical College of Thomas Jefferson University, 1953; age 70, died June 14, 1994. Dr. Furman was a pediatrician.

Abraham Ginsburg, DO, *Philadelphia*
Philadelphia College of Osteopathic Medicine, 1953; age 74, died June 22, 1994.

Walter W. Jetter, MD, *Greensburg*
State University of New York at Buffalo School of Medicine and Biomedical Sciences, 1931; age 88, died June 29, 1994. Dr. Jetter was a pathologist.

Robert B. Laucks, MD, *Philadelphia*
State University of New York Health Science Center at Syracuse College of Medicine, 1951; age 70, died July 20, 1994. Dr. Laucks specialized in emergency medicine.

Gil E. Pablo, MD, *Jenkintown*
University of the Philippines, 1942; age 77, died July 10, 1994. Dr. Pablo was a thoracic surgeon.

Ralph A. Shaw, MD, *Newtown Square*
Northwestern University Medical School, Illinois, 1962; age 63, died July 20, 1994. Dr. Shaw specialized in internal medicine.

Philip Vaccaro, MD, *Monongahela*
Jefferson Medical College of Thomas Jefferson University, 1925; age 93, died July 30, 1994. Dr. Vaccaro was a general surgeon.

• Denotes membership in the Pennsylvania Medical Society at the time of death.

The Educational and Scientific Trust of the Pennsylvania Medical Society provides you with a way to make a significant statement honoring the memory of and paying tribute to your colleagues who are deceased.

Send your tax-deductible memorial gift to The Educational and Scientific Trust of the Pennsylvania Medical Society, 777 East Park Drive, P.O. Box 8820, Harrisburg, PA 17105-8820.

EVERYPLACE YOU WANT TO BE
IS EITHER DOWNSTAIRS OR DOWN THE BLOCK.

Conveniently located, the beautifully appointed Sheraton University City features reasonable rates, outstanding meeting facilities and Smart Alex, our lively restaurant that's a local favorite. Just down the block are the University of Pennsylvania and Drexel University, as well as the Hospital of the University of Pennsylvania, the Children's Hospital of Philadelphia and Presbyterian Hospital. But every bit as important as our great location is our great service. You'll find our staff to be friendly, competent and quick to take care of your needs. YOCON®
YOHIMBINE HCl

Description: Yohimbine is a 3a-15a-20B-17a-hydroxy Yohimbine-16a-carboxylic acid methyl ester. The alkaloid is found in Rubaceae and related trees. Also in Rauwolfia Serpentina (L) Benth. Yohimbine is an indolalkylamine alkaloid with chemical similarity to reserpine. It is a crystalline powder, odorless. Each compressed tablet contains (1/12 gr.) 5.4 mg of Yohimbine Hydrochloride.

Action: Yohimbine blocks presynaptic alpha-2 adrenergic receptors. Its action on peripheral blood vessels resembles that of reserpine, though it is weaker and of short duration. Yohimbine's peripheral autonomic nervous system effect is to increase parasympathetic (cholinergic) and decrease sympathetic (adrenergic) activity. It is to be noted that in male sexual performance, erection is linked to cholinergic activity and to alpha-2 adrenergic blockade which may theoretically result in increased penile inflow, decreased penile outflow or both.

Yohimbine exerts a stimulating action on the mood and may increase anxiety. Such actions have not been adequately studied or related to dosage although they appear to require high doses of the drug. Yohimbine has a mild anti-diuretic action, probably via stimulation of hypothalmic centers and release of posterior pituitary hormone.

Reportedly, Yohimbine exerts no significant influence on cardiac stimulation and other effects mediated by B-adrenergic receptors, its effect on blood pressure, if any, would be to lower it; however no adequate studies are at hand to quantitate this effect in terms of Yohimbine dosage.

Indications: Yocon® is indicated as a sympathicolytic and mydriatric. It may have activity as an aphrodisiac.

Contraindications: Renal diseases, and patient's sensitive to the drug. In view of the limited and inadequate information at hand, no precise tabulation can be offered of additional contraindications.

Warning: Generally, this drug is not proposed for use in females and certainly must not be used during pregnancy. Neither is this drug proposed for use in pediatric, geriatric or cardio-renal patients with gastric or duodenal ulcer history. Nor should it be used in conjunction with mood-modifying drugs such as antidepressants, or in psychiatric patients in general.

Adverse Reactions: Yohimbine readily penetrates the (CNS) and produces a complex pattern of responses in lower doses than required to produce peripheral a-adrenergic blockade. These include, anti-diuresis, a general picture of central excitation including elevation of blood pressure and heart rate, increased motor activity, irritability and tremor. Sweating, nausea and vomiting are common after parenteral administration of the drug.[1,2] Also dizziness, headache, skin flushing reported when used orally.[1,3]

Dosage and Administration: Experimental dosage reported in treatment of erectile impotence.[1,3,4] 1 tablet (5.4 mg) 3 times a day, to adult males taken orally. Occasional side effects reported with this dosage are nausea, dizziness or nervousness. In the event of side effects dosage to be reduced to ½ tablet 3 times a day, followed by gradual increases to 1 tablet 3 times a day. Reported therapy not more than 10 weeks.[3]

How Supplied: Oral tablets of Yocon® 1/12 gr. 5.4 mg in bottles of 100's NDC 53159-001-01 and 1000's NDC 53159-001-10.

NEWSMAKERS

James A. Morris Jr., MD, was one of 15 members of the Delaware County Medical Society who volunteered their time and medical expertise on Sunday afternoons this past summer to provide "check-in physicals" to over 500 campers at Camp Sunshine. Owned and operated by the county government for 60 years, the camp provides overnight camping experiences to children from financially disadvantaged families throughout Delaware County.

The International Journal of Prenatal and Perinatal Psychology and Medicine earlier this year published "The Relevance of the Dread of Being Aborted to Models of Therapy and Models of the Mind, Part One: Case Examples," by **John C. Sonne, MD,** a Philadelphia psychoanalyst.

Peter McCombs, MD, vascular and general surgeon, Abington Memorial Hospital, received the Blockley-Osler Award from Temple University Medical School's 1994 senior class. The award is given to a physician-member of the affiliated faculty of the medical school for excellence in clinical teaching.

Dr. Keenan

Mary Ann Keenan, MD, international expert on neuro-orthopedics, has received the 1994 Commonwealth Board Award from the Medical College of Pennsylvania, Philadelphia, for her significant contribution to the medical profession and community.

Barry Mann, MD, was appointed vice chairman of surgery, Academic Affairs, Medical College Hospitals Elkins Park Campus.

William S. Frankl, MD, regional director, Division of Cardiology, Department of Medicine, Medical College of Pennsylvania, Philadelphia, has received the Edward Lawlor Award. The award—given by the Philadelphia Psychiatric Society—recognizes public service and political action, and was awarded to Dr. Frankl for his role as 1993-94 president of the Philadelphia County Medical Society.

Rodwan K. Rajjoub, MD, neurological surgeon, Williamsport Hospital and Medical Center, was elected to active membership in the Joint Section on Neurotrauma and Critical Care of the American Association of Neurological Surgeons and the Congress of Neurological Surgeons.

John R. Paluso, MD, director, Emergency Services Department, Mon Valley Hospital, was elected president of the medical staff. Other officers are: **Richard A. Long, MD,** president elect, and **James A. Solan, MD,** secretary/treasurer.

Dr. Walsh

Peter N. Walsh, MD, professor of medicine, biochemistry, and thrombosis research, Temple University School of Medicine, Philadelphia, was the recipient of the University's Sol Sherry Research Award.

William L. Bressler, MD, Huntingdon, was elected a fellow of the American College of Physicians.

Louis W. Catalano Jr., MD, a member of the medical staff, Latrobe Area Hospital, was elected a fellow of the Royal Society of Medicine, London, England.

Temple University Hospital, Philadelphia, has named **Douglas P. Harr, MD,** clinical assistant professor of diagnostic imaging.

The Geisinger Health Care System has appointed **Arthur Sherwood, MD,** senior vice president/medical director of community practice, Eastern Region.

Joseph C. Flanagan, MD, director of oculoplastic service, Wills Eye Hospital, Philadelphia, was elected president of the medical staff. Other officers are: **Edward A. Jaeger, MD,** vice president, and **William E. Benson, MD,** secretary/treasurer.

Temple University School of Medicine, Philadelphia, has named **L. Matthew Schwartz, MD,** clinical assistant professor, Department of Physical Medicine and Rehabilitation.

Stephen P. Dunn, MD, director, Liver and Kidney Transplant Program, St. Christopher's Hospital for Children, Philadelphia, was honored by the American Liver Foundation's Delaware Valley Chapter for his outstanding work in the area of transplant surgery.

Gordon F. Schwartz, MD, a specialist in diseases of the breast, Thomas Jefferson University Hospital, Philadelphia, and a professor of surgery, Jefferson Medical College, Philadelphia, was elected to honorary membership in the Greek Surgical Society during the American-Hellenic Surgical Congress, Athens, Greece.

St. Francis Medical Center, Pittsburgh, has named **Sang B. Park, MD,** chairman of thoracic and cardiovascular surgery, and **Thomas D. Maher Jr., MD,** vice chairman.

University of Pennsylvania Medical Center, Philadelphia, has named **William G. Baxt, MD,** first chairman and professor of the medical center's Department of Emergency Medicine.

Wallace P. Ritchie Jr., MD, professor and chairman, Department of Surgery, Temple University School of Medicine, Philadelphia, has been appointed executive director of the American Board of Surgery.

Dr. Calligaro

Keith D. Calligaro, MD, has been appointed chief of vascular surgery, Department of Surgery, Pennsylvania Hospital, Philadelphia.

Albrecht Schmitt, MD, obstetrician and gynecologist, Chestnut Hill Hospital, Philadelphia, was recognized for his contributions and dedication to the American Society for Colposcopy and Cervical Pathology as one of its founding members and first presidents.

Paul F. Pollice, fourth-year student at the University of Pennsylvania School of Medicine, Philadelphia, has received the Orthopaedic Research Society's New Investigator's Recognition Award for basic science research in orthopedics.

The American Society of Hypertension

presents

Advances in Hypertension: Integrating Science and Management

December 10, 1994
Marriott Marquis Hotel • New York, NY

A full-day postgraduate course presented by the faculty of The Cardiovascular Center, Cornell University, and sponsored by The American Society of Hypertension to review the epidemiology, pathophysiology, and treatment of hypertension and to integrate this knowledge with current clinical issues to provide the *practicing physician* with an up-to-date approach in the diagnosis and treatment of hypertension.

- Pathophysiology of hypertension
- Who needs treatment and who does not?
- Antihypertensive drugs: How to select the best regimen
- Curable hypertension
- Treatment of specific subpopulations

For complete program information or registration contact:
The American Society of Hypertension
515 Madison Ave., New York, NY 10022
Tel: 800-373-0715, Fax: 212-644-0658

The American Society of Hypertension designates this continuing medical education activity for 5.5 hours in Category 1 of the Physician's Recogniton Award of the American Medical Association.

Supported in part by an educational grant from Zeneca Pharmaceuticals Group.

If you thought the U.S. was in turmoil then, you should have seen the Oval Office.

The sad truth was for all his brilliance, when it came to furnishing an office, Honest Abe was completely lost. Maybe if we'd been around we could have helped.

At EI, we have an outstanding selection of entire office systems, freestanding and budget furniture. But that's just the half of it. You also get the entire EI Design Team. Professionally trained designers and color coordinators who know styles and fabrics like nobody's business.

CALL FOR OUR FREE OFFICE FURNITURE DESIGN PLANNING KIT.

Give us a call today at 717-652-6060 and we'll send you a FREE office furniture design planning kit. Or we'll come right to your office for a FREE, no obligation evaluation. Because even if you've helped preserve the union, won a civil war, freed the slaves and written the Gettysburg Address, like it or not, people are still going to remember you for your messy office.

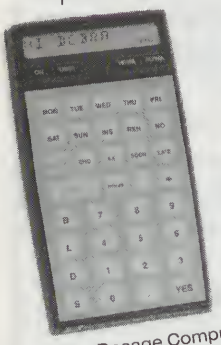
"TELEDOC™" A New Breakthrough: Intensive Diabetes Therapy

"Are you prepared for the DCCT challenge?"

TELEDOC™ is a new product from the mind of Better Control Medical Computers in Toronto. We now offer Intensive Diabetes Therapy via telephone link to a talking computer with individual instruction feedback to patients for daily diabetes care.



Insulin Dosage Computer

We also continue to offer the Insulin Dosage Computer: a pocket computer for individualized management of Diabetes, the Coronary Artery Disease Risk Factors Reversal Program, Osteoporosis Management, and Fine Needle Aspiration of thyroid nodules.

For consultation and information please call:

Do you know someone who needs nursing care in their home?

We have a special person to take care of your special person.

Are your patients entitled and/or eligible for Medicare benefits? If you are not sure call **MEDICAL PERSONNEL POOL** and we will help you get the answer. Bear in mind that a person need not be a Social Security recipient or over 65 to receive Medicare services. People who are disabled for 2 years or more are eligible as are people who are in dialysis for 6 months of longer. **MEDICAL PERSONNEL POOL** provides a full range of **HOME HEALTH SERVICES,** as well as private duty nursing. We provide most of these services in the home as well as in the hospital and nursing home.

Separate, But Unequal

Paul A. Kettl, MD

Facing the unfortunate fact that tens of millions of Americans have no health care, the Clinton administration is lobbying support for a revolutionary health plan. This plan, whose keystone is the desire to cover all Americans from serious illness, is now being examined by Congress and the American people. It is doomed to fail.

Failure is assured, not because of economic miscalculation, which I admit I couldn't understand in any event, or even because of partisan politics on Capitol Hill. Rather, it will fail simply because it will not equally insure all Americans.

Before the '92 elections, President and Mrs. Clinton and Vice President and Mrs. Gore supported and signed a petition by the National Alliance of the Mentally Ill to ensure equal insurance coverage for mental illnesses. They promised that mental health coverage would be equal in the new plan to other insurance coverage, giving a glimmer of hope to those who have suffered from illnesses poorly understood, and even more poorly insured by private and public insurance programs. However, only months later, this election promise continues to be only an echo of other election promises, lost in the caverns of bureaucracy. The president still says he wants to provide equal coverage for psychiatric disorders, but it will not come until the next century. In the meantime, there will be insurance coverage, but unequal coverage.

Why? How could the president have reneged on his promise? Could it be that psychiatric care is less effective than other types of medical care, and so is funded less well? Happily, that is not the case, since treatment for many psychiatric disorders, including depression and other affective disorders, have treatment outcomes better than treatment for coronary artery disease, and certainly better than some forms of cancer or AIDS.

Could it be that, if equally funded, everyone would run to a psychiatrist to have something to talk about at the next cocktail party? Of course, that is not the case either. Americans go to the doctor largely when they need to, and it is difficult to arrange more frequent visits for health promotion, illness prevention, or even checkups when they are feeling well.

In federal insurance programs in the past, when funding for all types of care, including psychotherapy, was excellent, only seven percent of employees sought psychiatric care. In my own experience in the Indian Health Service, where Alaska natives paid not a cent for all care—including mental health care and psychiatric care—consultation was obtained only when the patient was suffering. And, thankfully, then it was available.

Could it be that psychiatric care would cost too much? It is no secret that medical care costs money, and that amount has been escalating steadily over the last decade, leading to the proposed new program to control costs. Yet, psychiatrists are among the lowest paid physicians, and psychiatry long ago pioneered using non-physician health providers such as social workers, psychologists, and psychiatric nurses to aid in providing care at a lower cost.

The only reason that remains tenable is that the Clinton administration continues to believe in the stigma surrounding mental illnesses well recognized by those who suffer. The Clinton plan, instead of eliminating this artificial difference as promised, codifies and makes into federal law unequal and substandard health care for those suffering mental illnesses. The plan, designed to make health care available to every American, begins by limiting access to needed care to millions of Americans suffering from severe and potentially life-threatening illnesses.

The administration insists that now we cannot afford equal mental health coverage. So, the new plan would be financed partly by excluding those who may need it most. The health care budget would be balanced by the suffering of those misunderstood by the administration.

The plan, designed to provide equal access to health care to all Americans, fails to provide equal care. We used to lock the mentally ill up in institutions; now, we are locking them out, for literally no reason. It is time to give them the key to equal access to medical care.

"The plan, designed to make health care available to every American, begins by limiting access to needed care to millions of Americans suffering from severe and potentially life-threatening illnesses."

Dr. Kettl is associate professor of psychiatry at Penn State's Milton S. Hershey Medical Center, Hershey.

CONGRESS JUST CUT DOCTORS' RETIREMENT SECURITY BY $34,000 A YEAR– AND WANTS $2,700 MORE IN TAXES NOW.

Harry R. Tyler, Principal

Last year, Congress cut 36% from your retirement plan[1]. That means higher income taxes now[2], less money in your retirement fund to grow–and $34,000 less annual income when you retire[3].

The impact on your retirement will be dramatic–unless you act now. To have $100,000 a year of retirement income you will need at least $1.3 million in retirement assets[4].

Find out how you can protect your retirement security and increase your own plan contributions–without increasing contributions or costs for other employees.

Call 1-800-79-TYLER for a free copy of the Tyler Consulting Physician Retirement Security Checkup–including a 20-page booklet entitled, "Building a Secure Future." Call today.

TYLER *Consulting* Incorporated

(610) 344-0900 FAX: (610) 344-7656

The following assumptions are based on a physician age 45; earning between $140-250,000 per year; retiring at age 65; annual investment growth of 10%; and a 20 year payout (8%) at retirement.

1. Beginning 1/1/94, maximum compensation eligible for contribution to a profit-sharing plan is $150,000–36% less than $235,840 before. Instead of a $30,000 contribution, only $22,500 can be contributed–7,500 less annually.
2. $7,500 additional income is taxed at 36% (marginal tax bracket based on $140-250K of taxable income.) The annual increase in your tax is $2,700.
3. $7,500 less is invested for 20 years. Assuming 10% annual return, your retirement fund is reduced by $429,000– cutting retirement security by $34,000 every year.
4. To maintain a $100,000 income (inflation-adjusted at 4%) for 20 years requires $1,348,674 in retirement assets.

SOMETIMES THE BEST DEAL IS THE ONE YOU HAVEN'T HEARD ABOUT.

Maybe you haven't heard about the Medical Inter-Insurance Exchange (MIIX). After all, we're a relatively new player in Pennsylvania's medical professional liability insurance marketplace.

But ask your counterparts in New Jersey, and you'll find we've been getting rave reviews since we wrote our first policy there in 1977. We're proud that 98 percent of our 9,000 insured physicians renew their policies each and every year. With such an outstanding track record, we must be doing something right.

Perhaps it's our **innovative products**, such as our new **$500,000** HIV benefit that provides income protection — at no additional charge — for physicians who become HIV positive. We were the first professional liability insurer in the state of Pennsylvania to offer this coverage.

Or maybe it's our **commitment to service**, which includes 24-hour customer assistance and a claims staff that's the best in the industry. Our insureds know that MIIX makes sense financially, too, considering our outstanding discounts for new and part-time practitioners. We also offer flexible premium payment plans that help you manage your money.

Because MIIX is a **physician-owned company**, you can be assured that everything we do is designed with your best interests in mind. Call us today so you can join your peers who are already benefiting from the MIIX difference.

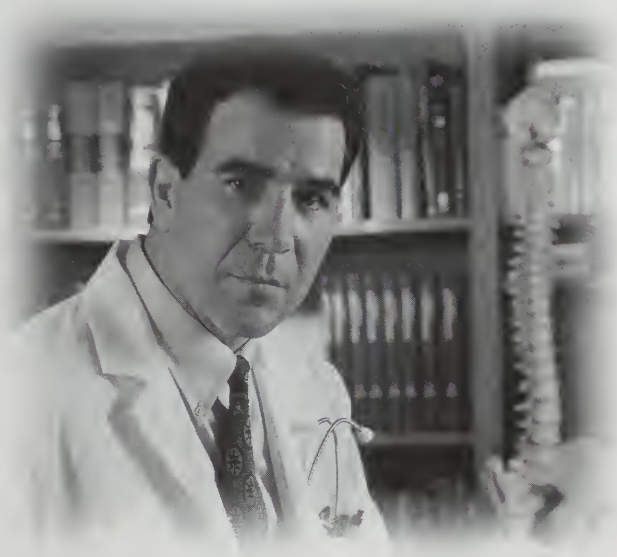
"Promises.

Every company makes them. Few keep them. Pennsylvania physicians



are lucky to have a resource like PMSLIC. I know. Early in my career I practiced in the Midwest. I saw colleagues get burned by a company promising the same medical liability protection for less money. I was pretty young, but luckily I didn't go with them. Unfortunately, my best friend, Phil, did. When his carrier went under, it looked as though a lot of good people would go down with it. Phil just got out by the skin of his teeth. A couple of our friends weren't so lucky. When I came to Pennsylvania, I checked out all my options. Know what? No company can match PMSLIC's record, or offer the same value-added services. Through the years, we've all heard many new carriers guarantee us big savings. But I can't see the value of saving a few dollars in the short run, if it means risking my future. Hey, if you don't believe me, give Phil a call." ❞

PMSLIC

"CHECK TIN NUMBER," BLUE SHIELD WARNS: If you are one of the 4,700 physicians in the state who received a letter from Pennsylvania Blue Shield regarding your taxpayer identification number (TIN), the Society reminds you that the deadline for submitting your revised W-9 form to the carrier is *November 18.* Blue Shield is required by the IRS to withhold 31 percent of future payments to physicians who do not meet the deadline. Direct questions to Blue Shield Provider Data Services at (717) 763-3224.

UNIFICATION SUPPORTED BY HOUSE: The Society's House of Delegates at its annual meeting in October voted by paper ballot not to deunify from the AMA. Resolution 101 (94) called for the Society to allow members freedom of choice regarding AMA membership. Lengthy debate at the Reference Committee on Bylaws focused on several issues, including differences in opinion with AMA policies, declining membership, and the economics of unification. After considering the debate, the reference committee recommended remaining unified, and suggested that the board establish a committee to study the issue of deunification and include results of an AMA Consortium studying the structure of the federation.

"MDP" FOCUSES PRIORITIES, EMPHASIZES MEMBER INPUT: In other action, the House of Delegates approved a new "membership-driven process (MDP)" under which the Society will set its priorities and take action based on the needs and wants of its membership. The process is designed to enhance two-way communication and ensure effective use of State Society resources.

DUES REMAIN AT $430 FOR FIFTH YEAR: The House also voted not to increase Society dues, making it the fifth year in a row dues are set at $430 for the full-dues membership category. Dues remain unchanged for other categories of membership as well. As in the past, $10 of the assessment will be given to the Society's Educational and Scientific Trust.

LANCASTER PLAN APPROVED: The Department of Public Welfare has approved the Lancaster Community Health Plan, a primary care case management program for Medical Assistance patients in Lancaster County. Robert G. Doe, MD, an emergency physician heading the effort along with a board of Lancaster business and professional representatives, reports that the contract became effective October 6. The Society has been assisting Dr. Doe in seeking the necessary approvals and waivers.

STATE NURSING BOARD WITHDRAWS APPROVAL OF DRAFT REGS: The Pennsylvania Board of Nursing has withdrawn approval of draft regulations that would have allowed nurse practitioners to prescribe drugs under guidelines that the Society felt would provide adequate supervision. Reportedly, the nursing board's reversal comes under pressure from the Pennsylvania Nursing Association. The future of this issue is uncertain.

TOLL-FREE HOTLINE OFFERS ANSWERS TO LAB QUESTIONS: The Commission on Office Laboratory Accreditation has announced a new toll-free hotline for physicians and their staff to call to receive "timely" answers to questions about CLIA and other lab-related issues. The toll-free number—(800) 298-8044—is staffed by medical technologists.

CAT FUND PROPOSES 102 PERCENT SURCHARGE FOR 1995: The Catastrophe Loss Fund (CAT Fund) has proposed a 102 percent surcharge to basic malpractice premiums for 1995. The surcharge serves as insurance above the amount covered under basic plans. Final Insurance Department approval is pending.

AMA ACCEPTING APPLICATIONS FOR 1995 ACHIEVEMENT AWARDS: The AMA is now accepting applications for the AMA/Glaxo Achievement Award Program, which provides grants to 25 resident physicians and 25 medical students nationally to attend the AMA National Leadership Conference. The next conference is in April 1995. For more information and an application, call (800) AMA-3211. Deadline is December 16.

SOUND PROTECTION

Choosing a professional liability insurer is a major decision–too important to play by ear.

Princeton Insurance Company's high-quality investment portfolio and our conservative approach to loss reserving have made us the choice of 22,000 in the medical and health care community.

We're not just blowing our own horn. Standard & Poor's has awarded us a claims-paying ability rating of "A."

That's sound protection through financial strength and stability.

Princeton. It's worth it!

Fall Musings

John W. Mills, MD
Medical Editor

Vivid red fall colors were spectacular as I drove through the Allegheny National Forest on my way home from Rochester, New York, and my fiftieth high school reunion. Still early in the day, I felt surrounded by tranquillity as I covered the miles, unhindered by less than minimal traffic.

It was a perfect state of mind with which to begin a three-week vacation. There was the usual frenetic drive to Pittsburgh airport late in the day, followed by the five-hour flight to San Diego. I was prayerfully thankful for a smooth flight, for I am, admittedly, a somewhat apprehensive flier, accentuated by recent events.

This was to be a special vacation, visiting our oldest daughter, our newborn newest granddaughter and two others, plus the added bonus of our youngest daughter and her husband during the first week. We anticipated being busy and hopefully helpful.

There was another special aspect of this vacation—the San Diego Railroad Museum in Campo, 50 miles east of San Diego. A Baldwin steam engine (a 10 wheeler, circa 1912) is being restored to operating status, and as a member of the crew, I hoped to participate in the action—a lifelong dream.

So as the hours went by aboard my flight, I tucked health system reform, medicine in general, and the Pennsylvania Medical Society, along with the 103rd Congress and "Bill and Hillary," into my subconscious, and contemplated laughter, grandchildren, valve gears, and the majesty of a real, live railroad steam engine.

Reality hit me briefly as my two sons-in-law (local attorney and Pennsylvania physician) met me at the airport. However, the next weeks were essentially free from professional concerns.

Jeans and work shoes set the scene for school bus commuting, grocery runs, piano and riding lesson excursions, all through the mountains of southern San Diego County, 30 miles east of the city and a few miles from the Mexican border. Repair projects were plentiful and welcome, for the physical exercise and challenge to my manual dexterity.

Finally caught up with my grandfatherly pursuits enough to earn a few free days, I was able to spend five days at Campo working on Engine 2353. All work is done by volunteer members, with some expert support from representatives of two steam engine crews from Union Pacific and Santa Fe. It was a 60-mile round-trip each day, a small price to pay for the privilege of being a "hands-on" contributor to the restoration of this marvelous piece of machinery.

I don't think I've ever been so relaxed, so excited, and so absorbed in what I was doing. Don't get me wrong; there have been many exhilarating times and moments in my ob/gyn career and family life. The simple truth of a real vacation is to shut out career, with low-key, yet absorbing activity, to leave one fully rested. It's one of those lessons you learn slowly as you mature.

Unfortunately, many younger physicians don't have the time or where-with-all to give their physical and mental capacities a real rest. I highly recommend such a goal on a regular basis. The ensuing refreshment and rejuvenation are really therapeutic and will certainly help long-term survival.

The pronouncement of death to health system reform by the 103rd Congress didn't escape my notice; it just seemed to be in tune with the calendar. The now brilliant yellow and orange leaves signal nature's preparation for winter's restful sleep.

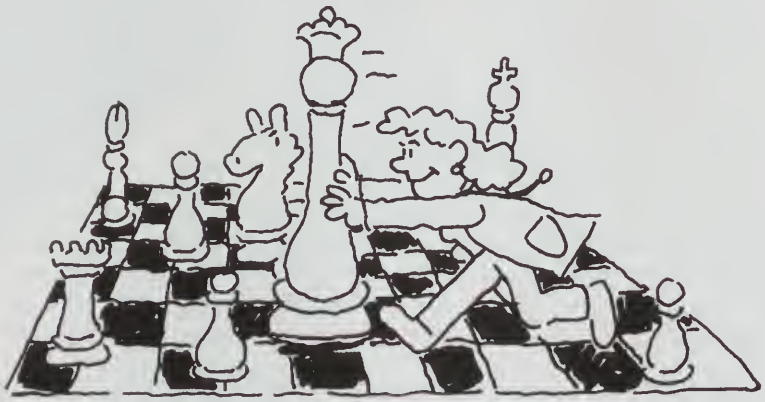
We have much to be thankful for. The American public couldn't stomach Clinton's "secret" health system reform, dominated by a seven-member, lay health board.

Democracy works—believe it! The marketplace is way ahead of "Bill and Hillary." They'll be back before Springdom (early February—halfway between the shortest day of the year and mid-spring, when days and nights are equal).

For now, enjoy family and any possible vacation from career, share this season of Winterdom, and be thankful for all your blessings.

"The simple truth of a real vacation is to shut out career, with low-key, yet absorbing activity, to leave one fully rested."

It's Time To Make Your Move



At Cancer Treatment Centers of America™, our Affiliates Program is on the cutting edge of healthcare innovation.

Oncology physicians who join the Affiliates Program have access to clinical research protocols, extensive patient support programs, and comprehensive practice support.

Practice support services include: national managed care contracting, clinical outcome analysis, direct patient referrals, financing, group purchasing, and insurance.

Our approach is designed to empower physicians to provide patient care which is efficacious, cost effective, and ethical. And our philosophy is simple. You take care of the patients, and we will help you with all of the rest.

Consider the rewards of affiliation with Cancer Treatment Centers of America™. For more information please call us at 800/234-9113.

We're All In This Together

John H. Hobart, MD

Production schedules being what they are, I am writing this column in advance of the 1994 House of Delegates meeting. Claiming no clairvoyance, I am thus writing without knowledge of what has already transpired in several important areas.

You, on the other hand, are reading this after the meeting has occurred, and you know where we stand on the issue of unification, as well as on many other issues that were debated and discussed at the House last month.

I'm not the first physician to look for ways to turn an apparent disadvantage into an advantage. So, I will not use this occasion to react, respond, or comment on what may already be "old news." Instead, I'd like to call your attention to some more or less immutable facts of life for organized medicine—three of the many things you can count on from your state medical society.

You'll never hear us call for divisiveness.
It seems kind of basic, doesn't it? But perhaps you don't realize how basic—and how unusual—medicine's commitment to unity really is. It helps to think about unity in terms of other organizations. In our efforts to affect the course of public policy, we in organized medicine forge many coalitions with those outside of the medical family.

This is a valuable, necessary, and often effective activity on our part. But it is not unheard of for the members of one of these coalitions to abruptly part ways in the midst of the legislative process. No one—not even the members of the coalition—sees this as anything more than necessary self-interest.

Contrast that, if you will, with the bonds we physicians form with each other. To my sorrow, I acknowledge that neither physician organizations nor individual physicians always speak with one voice, and sometimes their parting of ways on an issue may even be a bit divisive. But I can honestly say that no physician or physician organization feels good about it.

And we're never content with divisiveness. We should always be working to build bridges back to each other. In our hearts we know, I think, that it is in all of our best interests in the long run to stand together. The old adage of "united we stand, divided we fall" is every bit as true today as ever.

You won't hear us call for a return to the way things used to be.
We know the good old days of medicine, if there ever were any, are gone. It's a different world, and we have to play the hand we've been dealt. There is no value in hand-wringing over loss of autonomy and physician control. It's time for us to roll up our sleeves and start taking what control we can.

This is the whole idea behind our newest subsidiary, the PennMed Member Services Company (PMSCO). Our own research tells us that we must find ways to come together in physician-controlled organizations tailored to our own individual marketplaces—and there are many different health care marketplaces in Pennsylvania—if we want to take control of our future. AMA studies also conclude: Physicians do better when they organize themselves first.

You can count on us to meet the challenges faced by our membership.
Early on I said I made no claims as a clairvoyant. That doesn't mean we can't see into the future. Your State Society is casting a wide net to identify trends before they occur. Already, we can make educated guesstimates about how Pennsylvania's health care marketplaces will change in the next five or 10 years. We have data from places where these changes have already occurred. We are learning from the mistakes—and more importantly, the successes—of physicians elsewhere.

We are creating even more mechanisms to seek out and analyze the salient information that can provide guidance for our future planning. We will be asking you more questions and seeking to learn more from your individual experience.

The world is changing. It always has. But we must not allow the ups and downs of history to fragment our unity or frustrate our efforts to work together for our mutual good.

SUPPORT...

Your Medical Practice. Together, we can make it a winning effort.

- **Laboratory Panel Overpayment:** We saved physicians $4 million by convincing federal regulators that providers shouldn't have to pay for mistakes made by third party payers.
- **Dual Eligibility:** We won back between $25 and $45 million annually in renewed Medicare and Medicaid fees to Pennsylvania physicians.
- **Public Awareness:** The AMA logged 1,273 speeches, meetings, and interviews this year alone on behalf of you and your patients.
- **Your Community:** Your county society is a daily presence in your community and in your professional life.
- **Your Voice:** The Federation of Medicine is a democratic forum in which your voice counts.
- **Medicare Fee Increases for Ambulatory Procedures:** We won fair reimbursement for physicians' overhead costs.
- **Medical Liability Reform:** We led efforts to introduce a bill favorable to providers; shepharded unfavorable bills; are negotiating with the Trial Bar and governor's office.
- **Provider Tax:** We led the effort to defeat the Governor's plan for this onerous tax on physicians.

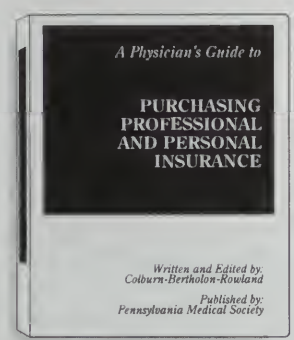
Your County Medical Societies

Know someone who could benefit from the efforts of the Pennsylvania Medical Society, the American Medical Association, and your county society?

Ask them if they could use some dedicated support.

If you're looking for the right group practice coverage, why not ask the people who wrote the book on it?



When they needed to know about insuring you and your group practice, the Pennsylvania Medical Society didn't just want us to act as a guide.

They asked us to write it.

We're Colburn-Bertholon-Rowland (CBR). The endorsed broker for the Pennsylvania Medical Society. And while "A Physician's Guide to Purchasing Professional and Personal Insurance" isn't the catchiest title, if you're up against the complex issues of insuring a group practice, you'll want it on your bookshelf. It deals with everything from life insurance to disability coverage to professional liability insurance. Oh, and health coverage. Homeowner's insurance. Even long-term care. And there's a lot more to it.

Endorsed by the PA Med. Society

And with CBR, there's a lot behind it. We've spent the last 65 years giving doctors our expertise on all forms of insurance and group benefits.

When it comes to individual and group practice insurance, we're the people to call on.

If this sounds like the kind of help you can use, call us at 800-551-4504 (Media) or 800-327-1550 (Pittsburgh). Your CBR rep will do more than give you a hand. The first time you meet you'll receive our book – a $30 value – *free*. And if you want more answers, just ask.

CBR

INSURANCE SERVICES

LETTERS TO THE EDITOR

ACT 44 REDUCING FEES, ADDING PAPERWORK

As a family physician who provides regular health care to a number of patients on workers' compensation, I am becoming fed up with Act 44. Not only has this act reduced our office fees, but it has generated a large amount of paperwork to be prepared at no cost to the insurance companies.

Most recently, I received a request for information from a large insurance company for a patient's one office visit. They asked for admission and discharge summaries; all the treatment notes; diagnosis; estimated length of disability, if any; nurses' notes; itemization of drugs; present and past health history; prognosis; and diagnostic tests. They claim that no authorization was required for all of this information to be released because of provisions of Pennsylvania's Workers' Compensation Act.

This type of letter is quite common amongst the insurance companies now, and the requested documentation is to be prepared at no cost to the insurance companies to my knowledge. I do not know how it is possible to both see patients at the reduced rate, plus prepare all of this information at no cost, yet still run a business. In the case of this patient, to prepare all of this information would take about 20 minutes.

I am sure many other family physicians find themselves in a similar predicament.

What can our Society do to help either reduce the paperwork load or get payment for services rendered? I would appreciate the Society's response to this question.

Thomas W. Andersen, MD
Mount Joy

Response: The State Society has been working to point out exactly what Dr. Andersen is speaking of—that third-party requests for medical information should be case specific and relevant to the issue at question, not "fishing expeditions." Society efforts continue with workers' compensation and auto insurance regulations, and more recently the Society addressed legislation dealing with the costs of copying medical records.

A reminder to all physicians: Physical medical records belong to the provider, and relevant medical information contained in the records belongs to the patient. If a third-party payer wants information on a specific service, it should ask for it.

For more information, call Don McCoy, the Society's director of regulatory affairs and specialty legislation, at (800) 228-7823 or (717) 558-7750.

Your Letters Are Welcome

The editors of PENNSYLVANIA MEDICINE encourage comments about the magazine and its contents, as well as viewpoints on current medical issues. Letters should be typed or legibly handwritten, concise, and should not exceed 200 words.

Please send letters to:

Clinical and Cost Effectiveness of Psychosocial Interventions in Health Care

Michael J. Asken, PhD
David W. Florence, MD, MPH
James M. Walker, MD
Lee C. Miller, MD

Physicians should recognize the importance of the psychological care of medical patients and not let it be pushed aside when the health system reform debate re-emerges next year.

From the ancient Greeks to the contemporary disciplines of behavioral medicine, health psychology, and consultation-liaison psychiatry, there has been the recognition by medicine of the important relationship of psychological and physical factors in health and illness.[1] Despite this, anticipated changes in health care are creating an environment in which the role for the *psychological care of medical patients* is in danger of being neglected in favor of the multiple needs competing for the pole position in the health care reorganization race.

Saravay and Strain observe that a lack of outcome studies on consultation-liaison psychiatry issues and interventions has resulted in the fact that "...the scope and effect of psychiatric disorders in medically ill persons have not been appreciated by our medical colleagues or by health care administrators or policy makers."[2]

This seemed particularly true as one tried to decipher various health system reform proposals with regard to provision of psychological services to medical patients. The content of the Clinton plan did not seem to clearly specify such services. Further definition of services at the state and federal level would complicate the picture even more and may result in exclusion of certain services, providers, or untenably low reimbursement rates.[3,4]

While the general assault on mental health coverage is misguided, the failure to designate specific psychosocial services for medical patients may be especially counterproductive. Cost-effective treatment of medical patients often requires skillful management of psychosocial problems.

The authors are affiliated with Polyclinic Medical Center, Harrisburg. Dr. Asken is clinical/health psychologist, Department of Rehabilitation Medicine, and teaching faculty, Internal Medicine Residency Program; Dr. Florence is vice president of medical affairs; Dr. Walker is staff physician and teaching faculty, Internal Medicine Residency Program; and Dr. Miller is staff psychiatrist and in private practice in Harrisburg.

Strain, Hammer, and Fulop report three essential observations with regards to the "psychology" of medical patients: 1) psychiatric and medical problems often coexist in the general medical ambulatory and inpatient setting; 2) health service utilization is increased with co-morbidity; and 3) psychosocial interventions can affect not only psychiatric morbidity but the cost of medical care as well.[5]

A sampling of several factors—including the broad and growing evidence for the frequency of significant psychosocial issues in medical populations, the influence of psychosocial factors on treatment course and clinical outcome, the impact that psychosocial interventions have on outcome, and the cost offset effects of providing such interventions—will show the importance of providing psychological/psychiatric interventions to medical patients in both the ambulatory and inpatient medical settings.

Frequency of psychological problems in medical populations

The Virginia Study by Marsland, Wood, and Mayo—a landmark in demonstrating the prevalence of psychological problems in primary care—found anxiety and depression to be among the 15 most frequent diagnoses made by family physicians.[6] A survey of directors of family medicine departments and family practice residency programs found that the directors reported that only 45.2 percent of patients were seen for purely "medical" problems, with the rest having an important psychosocial component to their presenting problems.[7]

From a different perspective, Florence and Asken recently discussed the presence and role of psychosocial factors in chronic pain and long-term disability.[8] Smith has discussed the increasing recognition of somatization disorder in medical patients, its influence in the overuse of medical resources, and its impact on health care costs.[9]

The medical effects of psychological problems in hospitalized medical patients and their extension to the post-discharge environment have also been documented. Schleifer and colleagues assessed the presence of depression in 283 patients admitted for myocardial infarction at two urban teaching hospitals. Assessed eight to 10 days post-MI, 45 percent met the diagnostic criteria for major or minor depression. At three to four months post-event, 35 percent continued to meet the criteria for major or minor depression.[10]

The incidence of depression in stroke patients has been reported at 26 percent, six months post-insult.[11] In general, depending on the setting and assessment methods used, rates of depression in medical outpatients range from five to 25 percent, and in the inpatient setting, rates of depression range from 15 to 33 percent.[12]

Treatment course and clinical outcome

Psychological factors have a broad impact on medical patients, from affecting willingness to accept screening, to compliance with prescribed treatment, to influencing decisions regarding hospital admission, to the course of treatment and clinical outcome.

Strain, Hammer, and Fulop reviewed three studies which concluded that psychosocial factors were related to admission decisions and to length of stay. In one study, 11.8 percent of hospital days could not be accounted for by physical needs. A second study found 18 percent of hospital days were secondary to social rather than purely physical problems, and a third study found that social factors were critical to the decision to admit in 21 percent of cases.[13]

Frasure-Smith found that patients hospitalized for myocardial infarction, in whom high levels of distress were identified one to two days pre-discharge, but who were treated with routine (non-psychological) care, demonstrated a 1.5-fold increase in reinfarction and a three-fold increase in risk of cardiac mortality compared to other patients. Return to work in patients with moderate or slight-to-moderate impairment after myocardial infarction has also been found to be significantly affected by psychosocial problems.[14,15] Depression, anxiety, and poor coping skills are associated with a low probability of return to work. Feibel and Springer found post-stroke depression to be significantly correlated with failure to resume premorbid activities.[16]

Returning to length-of-stay and related utilization factors, Saravay and Lavin recently reviewed 26 studies on psychiatric co-morbidity and length of stay for medical/surgical patients. They reported that whether conclusions were drawn from all studies available or only those "more recent rigorously controlled studies," co-morbidity contributed to prolonged length of stay and greater utilization of hospitals and other health care resources after discharge. Significant co-morbid conditions were impaired cognition, delirium, dementia, depressed mood, and personality disorders.[17]

Anticipating changes in health care delivery systems, a comparison of managed care and more traditional approaches found no difference in the presence of depression among patients in the different systems. Prepaid health plans did rely more on general medical practitioners to provide mental health care than psychiatrists, and the detection rates of depression were lower in pre-paid settings.[18]

Impact on outcome

The effects of psychological factors in medical care are clear. The next question is whether psychosocial and psychotherapeutic interventions result in improved outcomes.

It has been reported that, as early as 1934, Billings was involved with consultation-liaison services on a medical/surgical unit of a general hospital at the University of Colorado. Earlier discharge and improved psychosocial status of patients was described.[19] The same authors described a contemporary psychosocial screening and intervention program for elderly patients with hip fractures. The study was conducted simultaneously at two medical centers. At Mt. Sinai Hospital in New York, the average length of stay was reduced by 2.2 days with the program, and at Northwestern Memorial Hospital in Chicago, average length of stay was reduced by 1.7 days.[20]

The effectiveness of psychosocial interventions for addressing issues in surgical patients has been demonstrated in many studies. A typical example is that of Egbert and colleagues who found that appropriate psychological preparation of surgical patients reduced post-operative pain and post-operative narcotic use by 50 percent. Patients were judged ready for discharge approximately two days sooner when treated with psychological preventive and interventive strategies.[21] Work in this area led Olbrisch to conclude almost 15 years ago that "the effectiveness and economic efficiency of psychotherapeutic preparation for surgery are strongly supported."[22]

→

"The effectiveness of psychosocial interventions for addressing issues in surgical patients has been demonstrated in many studies."

As a final example of efficacy, the work by Frasure-Smith is again noteworthy for demonstrating the influence of psychosocial interventions on clinical outcome. In addition to finding significant rates of depression and adverse impact on outcome in post-infarction patients, she reported that highly distressed post-infarct patients who took part in a stress monitoring and intervention program showed no increase in morbidity or mortality as opposed to highly distressed post-infarction patients in the "regular care" protocol.[23]

The positive effect of psychosocial interventions in outpatient medical settings has been reported as well. Follette and Cummings found that individuals with high emotional distress were high utilizers of medical services. Further, even brief or single-session psychotherapeutic intervention led to decreased utilization rates. They concluded: 1) medical service use decreased significantly in psychotherapeutically treated versus non-treated groups; 2) the decline in use was maintained for five years after psychotherapeutic treatment was terminated; and 3) psychotherapeutic costs did not merely supplant medical costs.[24]

Rosen and Wiens reported similar results from psychological interventions. They found decreases in the number of: outpatient medical visits, days hospitalized, prescriptions written, emergency room visits, and diagnostic studies.[25]

Concern about medical costs has been the impetus for corporate and industrial preventive medicine and wellness programs. Approaches such as those used at General Motors or the Kimberly Clark Corporation have shown an ability to decrease medical costs.[26]

Surveying the available data, Cummings concludes, "The evidence thus far suggests that psychological services can reduce the inappropriate utilization of expensive medical care among the 'worried well' and improve medical management and behavioral outcomes among the chronically ill."[27]

Cost offset effects

A final concern that has special urgency in today's health care climate is whether these effects of psychosocial intervention translate into cost savings or simply become a layer of added expense.

Billings is noted to have provided data showing a decreased length of stay in medical patients with liaison services from 28 to 15 days. This translated into an avèrage total savings per patient of $43 dollars. (Per diem at that time was $4.)[28]

Psychosocial interventions with hip fractures described by Strain, Hammer, and Fulop were reported to have saved Northwestern Memorial Hospital a total of $97,361. A Social Risk Program at a different hospital was described by the same authors as reportedly demonstrating a cost savings of $1,096,802 in 1991.[29] This was equivalent to a return of $48 saved for every dollar spent. Finally, Cummings concluded that the impact of behavioral medicine interventions on hospital costs translated into $5 saved for every $1 spent.[30]

"Inclusion of psychosocial services for medical patients is necessary, cost effective, and good medicine."

The foregoing has been an attempt to represent the clinical and economic importance of psychological factors in medical care. Certainly there are variations in the quality of studies. However, while additional studies will be useful, there is currently enough good data to continue development and research into effective interventions.

With the emerging dominance of managed care arrangements in American medicine, practitioners and insurers will be sharing the financial risks of providing capitated services. This means that both practitioners and insurers need to know which patients can be expected to derive cost-effective medical benefit from interventions intended to improve their psychosocial functioning.

The next step is to continue to identify these groups, confirm the medical effectiveness and cost effectiveness of specific psychosocial interventions, and build the resulting recommendations into practice guidelines. Inclusion of psychosocial services for medical patients is necessary, cost effective, and good medicine. ⬡

PETERSON OFFERS RURAL VIEWPOINT ON REFORM

While the *New York Times* heralds its death on the front page, health system reform continues in good health on the state and local pages of newspapers statewide. In Pennsylvania, the rural viewpoint weighs heavily in the debate. Representing the commonwealth's largest and most rural Senatorial district, Senator John Peterson (R-Venango) has continued to focus on the need for extensive reform of the state's health system, despite the death rattle of nationwide efforts.

In his videotape presentation viewed early this fall by the State Society's Council on Governmental Relations, Senator Peterson said that there are few incentives for cutting costs in our current system. "More changes are occurring now from within the system than ever before because of the threat of reform," the senator said, emphasizing that the Clinton plan would "change almost everything" while accelerating costs. He says that the Casey plan is similar to the Clinton plan: "It gives awesome power to a nine-member board to develop a plan, to implement a plan, and to handle the money. With a $40 billion dollar budget, this board would instantly become the largest corporation in the history of Pennsylvania, a corporation that will control all of our health care needs. I don't know about you, but I don't want another bureaucracy interfering in my daily life."

Crucial to making the current system cost effective, he says, is prevention and wellness education, especially in such areas as drug abuse, interpersonal violence, and smoking. To coordinate these programs, he recommends creation of an Office of Physician General.

Among the functions of that office, he says, would be advising the legislature on more effective and efficient use of primary care providers: "Emphasis needs to be placed on training more primary care physicians and increasing the availability of mid-level providers, such as physician assistants, nurse practitioners, and nurse midwives to provide primary and preventive care." He advocates expanding the scope of practice for "mid-levels who are trained and capable of treating nearly 80 percent of the patients who visit a primary care doctor."

To ensure quality care, Peterson would require board certification for all specialties and subspecialties, and mandate continuing medical education.

Computerization of medical records, with the use of "PIN" numbers similar to bank access cards, would improve quality care and eliminate duplication of testing, he believes. Because physician ownership of labs and equipment increases unnecessary utilization and contributes to costs, he says, "We need to stop it as soon as possible."

Senator Peterson

"More changes are occurring now from within the system than ever before because of the threat of reform."

Senator Peterson includes tort reform as a necessary step in reform. Pennsylvania has made no changes in the law of torts in the past 20 years, and he emphasizes that "to be successful, support must be broad based with the medical community, business community, labor, service providers, and financial institutions joining hands to make changes in malpractice liability." The senator adds, "In our efforts to improve the health care system, we can't stop with tort reform but must reform our third-party payer system. The insurance industry agrees that we must provide continuity, reduce the number of uninsured, and lower health insurance costs. We need to guarantee issuance, require portability, prohibit pre-existing condition clauses, and include preventive care." He advocates allowing pooling of health care purchasing by small businesses.

Along with insurance reform, he would require a co-payment which could be discounted for healthy lifestyles, institute medical savings accounts, redefine basic coverage and create a special fund for research and experimental procedures, and simplify insurance forms.

Senator Peterson concludes, "We have the best health care system in the world, and it doesn't need a complete overhaul...We can fix our current system, but we must begin now or we will get a new system no one wants."

PHYSICIAN DE-SELECTION SUIT DISMISSED IN TEXAS

Editor's Note: This article is excerpted from the AMA's Electronic Network.

In a setback to physicians and managed care rights, a Texas federal judge dismissed a lawsuit challenging de-selection of Houston-area physicians by Aetna Health Plans. The plaintiffs in the case were five Houston physicians, the Harris County Medical Society, and the Texas Medical Association.

The lawsuit arose from Aetna's decision last September to de-select 37 physicians from its Houston-area preferred provider organization (PPO) network of more than 2,000 physicians. Sixteen of the 27 physicians who appealed the decision by Aetna have subsequently been reinstated.

The district court ruling reinforced the Texas Department of Insurance's ability to enforce rules regarding managed care plans, but indicated that physicians could not sue the insurers who do not follow those rules. The plaintiffs plan to appeal the U.S. District Court's decision to the Fifth Circuit Court of Appeals.

For more on Society efforts related to the "any willing provider" issue, see "Any Willing Provider Language Approved," page 20.

ACTIONS OF THE BOARD OF TRUSTEES, SEPTEMBER 13-14, 1994

ANY WILLING PROVIDER LANGUAGE APPROVED

Exclusion of providers from managed care contracts is a major issue—and a controversial one—among Pennsylvania physicians. At its September meeting, the Society's Board of Trustees attempted to clarify its position on the complex "any willing provider" debate.

The current policy, adopted by the 1993 House of Delegates, requires the Society to include in its health system reform position "the concept that any willing health care provider/supplier be permitted to participate in health care networks/alliances, provided they meet basic quality assurance criteria."

To date, the any willing provider debate in Pennsylvania has largely focused on the two extremes. At one end, proponents of strict any willing provider legislation say networks should be required to admit any licensed provider willing to accept the plan's payment terms. At the other end, opponents say that networks should have unfettered discretion regarding who is admitted to a network.

The Society's board believes there is a middle ground, and that the interests of the *core* of the Society's membership and their patients will be best served by a solution that recognizes the legitimate concerns of both sides. Thus, the board is committed to re-focusing the debate in the commonwealth and obtaining legislative safeguards that preserve the Society's three system reform goals of access, quality, and freedom of choice.

With this in mind, the board presented five specific recommendations to the House of Delegates at its October meeting:

1) The Society should endorse AMA positions advocating selection criteria based on professional competence and quality of care, due process, and physician input from a network "medical staff" regarding both the criteria and the process.

2) Managed care networks should not be permitted to require physicians to have hospital admitting privileges in those areas of the state where it is impractical for the physician to maintain such privileges or where such a requirement could aggravate a physician shortage.

3) Managed care networks should be required to waive board-certification requirements in areas where such a requirement could aggravate a physician shortage.

4) The Society should seek legislatively mandated safeguards to protect providers from arbitrary exclusion from managed care networks.

5) The Society should reiterate its position that individuals must be free to choose from a full range of health care coverage plans, and should not be forced into a plan that limits their choice of provider or misled into selecting such a plan.

Follow-up of House action on these recommendations will be included in annual meeting coverage next month in PENNSYLVANIA MEDICINE. For national news on the any willing provider issue, see "Physician De-Selection Suit Dismissed in Texas," page 18.

LEGISLATION WOULD EASE DUAL ACCREDITATION SYSTEM

The Society is hoping to ease compliance for physicians' office laboratories now struggling under the commonwealth's dual system of laboratory accreditation.

Currently, Pennsylvania physicians with office labs must comply with both federal and state regulations of accreditation. But the Society's Council on Education and Science maintains that the problem "could easily by resolved" if the federal government and the state Bureau of Laboratories both accepted the standards of the Commission on Office Laboratory Accreditation as equivalent to their standards. The Health Care Financing Administration announced late last year that it would grant "deemed status" to the Commission on Office Laboratory Accreditation, but the state Department of Health still does not recognize the commission's standards.

Board action in September directs the Society to seek state legislation to require the bureau to grant deemed status to the commission. Until such time, enrolling through the commission will not relieve physicians of dual accreditation.

Other actions

Other board-approved recommendations of the Council on Education and Science direct the Society to:

• *Assist physicians in assuring that patients' wishes concerning levels of care are followed.* The board approved as policy new level of care guidelines, developed by the Society's Commission on Bioethics, which has determined that "changes in thinking rendered the concept of DNR [Do Not Resuscitate] orders obsolete." Commission members noted that such orders can't be viewed as "all or nothing," but instead, "physicians must be prepared to customize the orders to more exactly match the patient's wishes."

• *Be prepared to suggest changes to the Medical Practice Act of 1985, should the act be reevaluated next year.* Though the 1985 act was originally slated to expire in 1995, sunset laws were recently ruled unconstitutional, and such laws are now prohibited from expiring. However, legislators may still scrutinize the law and make changes, and hearings on the Medical Practice Act are expected. Society suggestions address peer review, licensing of international medical graduates, drug addiction, and disciplinary actions, among other topics, and incorporate Society House of Delegates mandates.

• *Reaffirm its continuing medical education (CME) requirement for Society members*—Following a suggestion that the Society drop its CME requirement for membership, the council studied the issue and cited a number of reasons not to drop the requirement, including that "education is clearly the basis of improving health care." The council also noted, "We have an obligation to protect the integrity of the medical profession."

SPONSORSHIP SOUGHT FOR IMMUNIZATION BILL

The Society hopes to introduce a bill to help promote preschool immunizations. In response to

Resolution 93-4, which directs the Society to pursue legislation requiring more stringent vaccinations, the board has approved draft language for a new immunization bill.

The bill would mandate the Advisory Health Board to publish a list of immunizations required of children attending any school, day care, or camp, or being treated at any public health clinic operated by the state. The Pennsylvania Academy of Pediatrics has indicated support for the Society's language, citing that it allows for flexibility to easily adapt Pennsylvania's requirements to federal guidelines.

The Society is now seeking sponsors for the bill; introduction is anticipated early in 1995.

PHILADELPHIA RESOLUTION SPARKS ACTION

Providers should know how they're being judged, Philadelphia physicians and others have said with increasing urgency.

In response to a resolution submitted by the Philadelphia County Medical Society, the board approved a series of recommendations which seek to require Pennsylvania's health insurance carriers to provide all physicians and subscribers with the parameters or guidelines the carrier uses to review patient treatments and hospitalizations.

The recommendations, developed after study by the Society's Council on Medical Economics, direct the Society to: support utilization review legislation, which addresses the release of guidelines upon request; draft a letter to the insurance commissioner requesting release of the guidelines; and continue to encourage the AMA to follow-up on their related policies.

The board also voted to support as a pilot the initiative of the Pennsylvania Chapter of the American Academy of Pediatrics to implement a resource based relative value scale (RBRVS) reimbursement system for those Pennsylvania Medical Assistance recipients between the ages of 0-21 who are enrolled in the Family Care Network, a primary care case management program. The RBRVS would only be applied to various evaluation and management codes, not all services.

SOCIETY TO PETITION STATE TO AMEND NEWBORN REGS

In response to a board-approved recommendation of the Interspecialty Section, the Society will petition the Pennsylvania Department of Health to amend its Physical Examination and Required Treatment of Newborn regulations.

The debate: Must a physician be in the delivery room to perform a complete physical examination on a newborn infant before it leaves the room? The section says no, citing that such a requirement is unnecessary and inconsistent with clinical guidelines endorsed by the American Academy of Pediatrics and the American College of Obstetricians and Gynecologists.

Board Reviews Reports on '93 House Actions

At this meeting prior to the October House of Delegates meeting, the board approved several reports in response to 1993 House action:

- *Resolution 93-9, Medicare Catastrophic Act of 1988*—Called for Society's AMA delegation to present a resolution to the AMA seeking an amendment to the law that would qualify patients for medically necessary nursing home care, even if they have declined hospitalization in an advance directive.† The Council on Education and Science reported that since the AMA's initial efforts on this issue did not result in any change, legislative action would be required to correct the situation.

- *Resolution 93-10, Budget Neutral Conversion to RBRVS*—Directed the Society to review the merits of litigation charging that the initial resource based relative value scale (RBRVS) conversion factor was improperly calculated, and to consider supporting the litigation. Society general counsel, after extensive monitoring of AMA activities and careful study of the issue, reported that such litigation is unlikely to be successful.

- *Resolution 93-20, Laboratory Studies as Screening Tools for Patients in Long-Term Care Facilities*—Called for the Society to work with the Department of Health (DOH) to adopt more appropriate requirements for laboratory screenings of patients in long-term care facilities.† The Council on Education and Science reported that DOH intends to revise the regulations and is willing to place a Society representative on the panel that reviews them.

- *Resolution 93-68, Medical Staff Self-Governance*—Called for an individual who personally or through an employer holds a contractual obligation with a hospital, its parent corporation, or any subsidiary, to be ineligible for membership on a hospital medical staff executive committee unless elected by the staff in its entirety or by a department in an open-nomination election.† The Governing Council of the Society's Hospital Medical Staff Section (HMSS) reported that the AMA adopted a similar resolution in December 1993, and through AMA efforts, "the intent of the resolution has been accomplished."

- *Resolution 93-71, Economic Credentialing*—Directed the Society to oppose economic credentialing as the sole or primary criterion for determining hospital medical staff privileges, and directed the Board of Trustees to report to the House of Delegates on the ramifications of economic credentialing for hospital medical staffs and the development of health care networks. The HMSS Governing Council reported that language reflecting this opposition has been added to the Society's "Model Medical Staff Bylaws." The council also outlined the possible negative effects of economic credentialing on health care delivery.

New resolutions

The October issue of the Society's *Executive Report* included summaries of 73 resolutions submitted for this year's annual meeting of the House of Delegates in Hershey.

Resolutions address: unification/deunification, state regulation of laboratories, care for the indigent, confidentiality, continuing medical education, physician review for medical staff, independent review of third-party payers, freedom of choice, antitrust and discrimination litigation, conflict of interest, public health, and reimbursement, among others.

Look for complete annual meeting coverage next month in PENNSYLVANIA MEDICINE.

† *1993 House of Delegates referred for further study.*

Electronic Claims Are First Step in Computerization

Eric L. Marr

Electronic claims submission (ECS) in the U.S. took hold in the early 1980s. Today, more than 20 percent of all medical claims—including an estimated 16 percent of all claims filed by physicians—are submitted electronically. This article explores some of the advantages to ECS.

By the end of next year, nearly all Pennsylvania physicians will be using—or on their way to using—electronic claims submission (ECS). About half of all physicians' offices file at least a portion of their claims via computer, and many file over 90 percent electronically. Even so, the percentage of electronic claims filed by doctors still lags well behind that of hospitals and pharmacists.

A recent survey conducted by Strategic Marketing and Research, Inc., discovered that, as expected, medical practices with computers in their offices are more likely to understand the ECS process and view it favorably. The survey also identified several reasons why some physicians had not filed claims electronically in the past. These reasons included: lack of interest, office too small, the belief that ECS causes too much work, and in some cases, lack of knowledge about ECS in general.

But as ECS gains popularity among physicians and their staffs, the benefits, ease of installation regardless of practice size, and wide range uses of electronic claims are becoming commonplace. More and more physicians are finding that the advantages of electronic claims outweigh the early uncertainties of the electronic process. Obviously, times are changing, and influences are at work that may spark almost total conversion from paper to electronic claims processing within the next 10 years...or less.

Mandated filing looms

Government mandates will be a significant factor in a push to encourage physicians to file claims electronically. As recognized in the September 1994 issue of *Medicare Report*, a quarterly newsletter published by Pennsylvania Blue Shield, ECS standards provide an electronic format that can be shared by insurance carriers for the purpose of electronic claims filing. According to the article, approximately 470 local formats will be replaced by a standard format like the National Standard Format (NSF).

The Health Care Financing Administration (HCFA) hopes to lessen the administrative costs associated with processing numerous paper billing forms by promoting electronic claims and the NSF. Although HCFA doesn't currently require Pennsylvania's electronic claims submissions to be NSF compliant, early 1995 has been targeted as the time frame to complete the transition.

Based on information from other carrier newsletters and bulletins, the NSF's uniform standards for submission of medical claims will be available in 22 states by January 1995. A full national implementation of these standards will eventually follow, dependent on the ability of the state to effectively accept and incorporate these changes.

H. Jerome Noel, secretary-treasurer of the Association for Electronic Health Care Transactions, and vice president of ClaimNet, a national electronic claims clearinghouse, says, "While initial mandates may apply only to group medical practices and clinics of a certain size, use of ECS by all physicians appears to be only a matter of time. It is imperative that physicians align themselves with organizations that have the ability to maintain NSF standards, as these standards are still evolving."

Gaining ground

Pennsylvania Blue Shield estimates that of all Pennsylvania physicians filing Medicare Part B claims, 76.7 percent do so electronically. The *Automated Medical Payments Directory* states that the percentage of claims processed electronically increased 30 percent from 807.8 million in 1992 to 1.05 billion in 1993. Patient services reimbursed through Medicare and

Mr. Marr is marketing manager, Physicians Practice Management, Indianapolis.

Medicaid account for the vast majority of electronic claims processing at present. HCFA says Medicare Part B annual claims volume for 1994 is projected to be 630 million, of which 70.9 percent will be processed electronically. The *Automated Medical Payments Directory* estimates that Medicaid's annual claim volume for 1993 reached 874 million claims, up 68 million from 1992.

Figures like this certainly suggest that the health care industry—payers and providers alike—is taking strides to do away with paper claims. Whether the move to electronic claims is due to carrier requirements or a desire to more effectively manage claims traffic, the benefits for making the move are substantial and very real.

Users recount ECS benefits

As office manager for a large, single-physician practice in Indiana, Pennsylvania, Lisa Gardner, of Thomas McCoy, MD, went from being "sort of iffy" about converting to electronic claims to a solid supporter. Changing from an earlier computer system was something she kept putting off. However, once making the commitment to go to electronic filing, the transition was "smooth and fast." Gardner says, "ECS is much quicker and simpler than paper filing and produces a much faster turnaround."

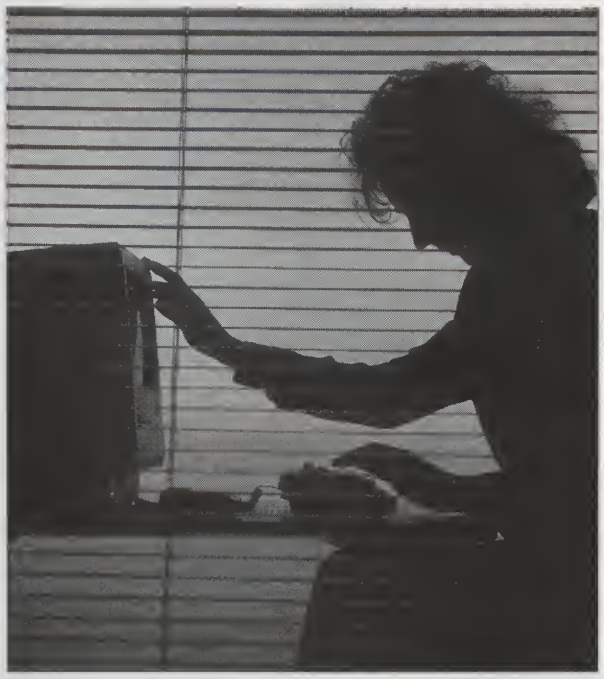
Conversion to electronic claims is becoming a simple decision for many physicians. In a recent survey of ClaimNet's Pennsylvania submitters, three benefits stood out as the motivating factors for area physicians deciding to go electronic.

First was the effect ECS would have in enhancing cash flow for the practice. With most major carriers guaranteeing at least a 14-day turn around on clean claims, practices would typically see an improvement in their cash flow.

Alleviation of time-consuming paperwork was the second most important reason to go with ECS. Considering the time saved in not having to manually complete claim forms, not having to stuff envelopes, and no longer having to apply stamps, it's easy to see why this rated so high on the list.

The third largest motivation was the convenience of electronic claims. Customers surveyed also noted that errors and glitches that trigger claims rejection are some of the biggest drawbacks of the present paper system. ECS innately brings improved accuracy to the process.

Cindy DelBianco, office manager for Paul DelBianco, MD, a Pittsburgh internist, has seen the practice go from start-



up in 1988 to a present patient roster of over 5,000. Her regret is that she didn't immediately begin using electronic claims processing when the office received carrier approval in 1988. "We save money on administrative costs, paper costs, turnaround and convenience," says DelBianco, who estimates annual economies in the thousands of dollars. The rapid growth of the practice, coupled with the opening of a second office, forestalled the conversion to electronic filing, but the volume of claims eventually became too much to handle manually.

Sandy Pierce is office manager for James Mayo, MD, who provides obstetric and gynecological services to more than 3,000 patients at Westmoreland Health Care for Women in Greensburg. After converting from paper record-keeping and claims processing in 1990, Pierce says, "The speedy turnaround time for payment of claims, reduced administrative work, time and savings of paper and postage, were major benefits." Faster processing of claims results in "better lab and support services for patients," says Pierce.

"The benefits of ECS are rapidly becoming a standard that most effectively managed practices depend on," says Cindy Cole, manager of National Accounts for Physicians Practice Management. "ECS will continue to grow regardless of the direction that health care reform may take."

Tip of the iceberg

As beneficial as electronic claims filing is, much greater benefits lie ahead for the computerized medical practice.

→

"ECS can be looked on as a kind of DNA building block for the electronic information world of tomorrow."

—H. Jerome Noel

Noel says, "ECS can be looked on as a kind of DNA building block for the electronic information world of tomorrow." It leads directly into the information super highway, where plugged-in physicians and their office managers will rely on electronics for a myriad of valuable functions.

He notes, "We are in the initial stages of testing outcomes management capabilities, primarily due to the capacity we have for transferring information electronically. One of the most topical and powerful concepts of electronic data movement is the ability to instantaneously collect encounter and outcomes data. The volume and importance of this data can be overwhelming, thus the need for effective software and powerful electronic capabilities."

Possible future functions of electronic data flow could include: eligibility status of the patient, benefits certification, remittance advice, automatic crediting of payments, movements of funds, the instant availability of patient data, and lab results. The electronic information highway will eventually connect physicians, carriers, and processors, and will allow instant access and delivery of important data. To the extent this information is used effectively, it may be a powerful tool that can produce significant benefits in the practice of medicine.

"Electronic reimbursement of claims is not far down the road. Carriers will soon be stepping up direct deposits to service providers with payment going right into physician's bank accounts," explains Cole.

Easy start-up

Three things are required to submit claims electronically: a personal computer, dependable ECS software, and a dependable modem. Obviously, more sophisticated software is available for additional functions in the office, but for ECS, this is all that is required.

Typically, a new installation takes a week to 10 days to start-up, depending on the commitment and computer experience of the person responsible for filing claims. If this person is familiar with computers, the process is extremely simple. For those with little or no computer experience, support or training from the electronic claims software developer is beneficial.

Completing the necessary paperwork for Medicare/Medicaid, assisting staff members with entering the practice's procedure codes, helping with entering the required provider numbers, or just talking someone through the process are services with which some developers help.

"Obviously, everyone has to use judgment as to when making the transition to ECS is doable, given their practice size and patient load," says Cole. "However, our customers tell us that once they decided to go with ECS, their ability to catch up accelerated dramatically, and that usually resulted in less pressure and a much more relaxed office environment. I also believe that having an ECS support person to contact when concerns arise is instrumental in alleviating the trepidation regarding ECS."

Beginning suggestions

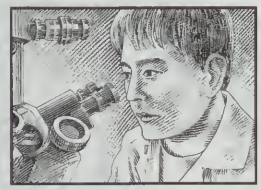
To a physician or office manager still using paper claims, but ready to investigate ECS, a few suggestions:

- Check out the option of using a clearinghouse/processing service versus filing directly with insurance carriers. Review costs, upgrades, access to carriers (how many), and support.
- Work with your vendor. Vendors usually know the software and hardware best suited to meeting your needs—present and beyond—and can help you overcome computer inexperience. If you do not work directly with a vendor, there are consulting organizations that can make responsible, unbiased recommendations.
- Review the after-sales service support you can count on, both with regard to installation and online operations. Expect periodic service upgrades that will bring added features and benefits.
- Don't become enamored with a system with more bells and whistles than you need to meet reasonable present and future requirements.
- Be certain that your choice for software is NSF compliant.

WHAT'S SO SPECIAL ABOUT A CANCER HOSPITAL THAT ORGANIZES A PATIENT REUNION EVERY YEAR?

Our annual reunion demonstrates what makes The James so special - our dedication to caring for your patients. You see, The Arthur G. James Cancer Hospital and Research Institute has a focused mission. To help people who have cancer and their families. So if you ever need to refer a cancer patient, you can be sure our primary interest is their good care.

The James is a research and treatment facility dedicated solely to fighting cancer. And everything about The James is geared toward that goal.



We are one of only 27 Comprehensive Cancer Centers in the country, as designated by the National Cancer Institute. We are the only freestanding cancer hospital in the midwest. And assembled at The James is a group of the world's finest researchers and cancer physicians who continually broaden our knowledge and raise the standards of cancer care.

That is what makes The James a premier cancer facility. A place that can provide your cancer patients with the very best care available, the most advanced treatments and a profound level of compassion. We can also provide you with any treatment and referral information you need via the OSU Consult*Line*, **1-800-824-8236.** This service can give you access to our cancer physicians from 8 a.m. to 6 p.m. weekdays, and 24 hours a day, seven days a week, if an emergency should come up.

There are many reasons The James is so special. Here are just a few. But every year at our reunion, there are about 1,200 more.

Controlling Diabetes in Pennsylvania

Pennsylvania Department of Health
Diabetes Control Program

In a single day in Pennsylvania, 500,000 blood glucose tests are performed, and 250,000 insulin injections are given. There are also 554 new hospitalizations, 32 deaths, eight lower extremity amputations, four new cases of blindness, and two new cases of kidney failure due to diabetes. What is Pennsylvania doing to change these numbers?

The Division of Diabetes Translation of the Centers for Disease Control and Prevention (CDC) has established a conceptual framework to guide national and state-based efforts to reduce the burden of diabetes. In 1981, Pennsylvania was designated by the CDC as a Diabetes Control Program state.

The CDC-funded, state-based programs are expected to coordinate the following four activities:

1) defining the nature and extent of the diabetes problem within the state through surveillance of mortality and morbidity, and monitoring of health services and health outcomes;

2) developing new approaches to reduce the diabetes burden within evolving systems of care, such as health systems interventions that incorporate quality standards and protocols for diabetes care and education, community organization/mobilization and outreach efforts, and public education;

3) implementing specific program initiatives to ensure that accepted standards, policies, and protocols for diabetes are incorporated into the health care system; and

4) coordinating diabetes-related efforts of the public health system with private practitioners, payers, and other relevant governmental, voluntary, professional, and academic institutions.

The state's strategies

Pennsylvania uses three major strategies—collaboration, consultation, and education—to address the diabetes burden.

Collaboration—The state collaborates with medical and other professionals who provide advice and assistance in diabetes program planning and implementation. A special Pennsylvania Diabetes Task Force, appointed by the governor, provides this professional advice. Establishment of the Pennsylvania Recognition Program allows for quality community-based diabetes patient education.

Consultation—The state employs nine community-based diabetes nurse consultants who provide consultation and services to health care providers, institutions, agencies, and patients and their families in counties and districts of the commonwealth. These nurses also assist hospitals in developing outpatient education programs that meet National Standards for Diabetes Patient Education Programs, as developed by the National Diabetes Advisory Board.

Over the past 12 years, the nurses have provided resources, updates, or consults to over 73,000 health care providers or agencies; conducted 851 programs for school nurses and 31 programs for correctional facilities; and given educational materials or assistance to 85,645 individuals with diabetes.

Currently, 85 hospitals in Pennsylvania have been recognized by the Pennsylvania Department of Health as meeting the National Standards for Diabetes Patient Education. These hospitals have conducted 2,643 outpatient education programs reaching 19,874 people with diabetes.

Education—The state contracts with the Pennsylvania Diabetes Academy to develop educational materials for health care professionals and patients, disseminate current information on management and technological advances, and provide educational resources to practitioners, agencies, organizations, and consumers.

Other diabetes-related projects include:

- free foot and eye screenings, with assistance from the Pennsylvania Optometric Association, the Pennsylvania Podiatric Medical Association, and the Pennsylvania Diabetes Academy;

The information in this article was compiled by representatives of the commonwealth's Diabetes Control Program, with assistance from the Pennsylvania Diabetes Academy of the State Society's Educational and Scientific Trust.

Novo Nordisk DIABETES Care

Meeting the Glucose Challenge Upgrading Diabetes Therapy

. . . now that we know it matters

DEVELOPED IN COLLABORATION WITH THE JOSLIN DIABETES CENTER

SERVICE PROGRAMS FROM THE WORLDWIDE LEADER IN DIABETES CARE

UPGRADING DIABETES THERAPY IN NIDDM

What did the DCCT demonstrate?

Intensive diabetes therapy significantly reduced the risk of chronic complications of diabetes in patients with IDDM:

- Retinopathy was reduced by up to 76%
- Nephropathy was reduced by up to 56%
- Neuropathy was reduced by up to 60%

Intensive diabetes therapy was associated with weight gain as well as a significant increase in the frequency of severe hypoglycemic episodes. On the basis of these results, the investigators recommended that "most patients with IDDM be treated with closely monitored intensive regimens, with the goal of maintaining their glycemic status as close to the normal range as safely possible.[1]"

The American Diabetes Association extended this recommendation to patients with NIDDM:

> "It seems reasonable to recommend tight control in many patients with non-insulin-dependent disease because it is presumed that the mechanism by which glucose causes complications is the same in both forms of diabetes.[2]"

What do these findings mean to you?

Intensive diabetes therapy can require resources not readily available in many practices; however, the DCCT findings indicate that every incremental improvement you can make in your NIDDM patients' glycemic control can decrease their risk of subsequent diabetic complications. *Upgrading Glycemic Control in NIDDM: A Stepped-Care Approach* was designed to assist you in meeting the challenge of achieving and maintaining improved glycemic control in your patients with NIDDM.

How should you start to meet the Glucose Challenge?

A good way to begin is to familiarize yourself with the "Clinical Practice Recommendations for Diabetes Mellitus" found on this wallchart. This guideline indicates the minimum standards of continuing care for persons with diabetes that have been recommended by the American Diabetes Association.[3] You can photocopy the clinical practice recommendations and keep them with your patients' records to document that you have fulfilled these minimum standards of care for your NIDDM patients.

HOW TO USE THE STEPPED-CARE APPROACH FOR UPGRADING DIABETES THERAPY

STEP 1: Diet and Exercise

The first step in therapy for patients with newly-diagnosed NIDDM is dietary modification and an appropriate exercise plan. Initially, this form of therapy will be effective in approximately 17% of NIDDM patients.

Since the majority of NIDDM patients are overweight, a diet that provides 10-12 kcal per day per pound of desirable body weight can be prescribed. (For men, desirable body weight is 106 lb for the first 5 ft of height and 6 lb for each additional inch. For women, desirable body weight is 100 lb for the first 5 ft of height and 5 lb for each additional inch). There is no single "ADA" or diabetic diet; the diet regimen you prescribe should be individualized; emphasis should be placed on glucose and lipid goals.[4] Ideally, the patient should be educated about his or her new diet by a registered dietitian, unless you or other members of your office staff have the time and the expertise.

In those NIDDM patients for whom it is appropriate, an exercise regimen should be prescribed. A regimen that is not overly demanding is most likely to be followed by the patient.

After three months on a diet and exercise program, see where the patient stands on the Stepped-Care algorithm. If in the red zone (BG>200 mg/dL or HbA_{1c}>10%), the patient should be upgraded to Step 2 or referred to a specialized diabetes health care team. If the patient falls in the yellow zone (BG 140-200 mg/dL or HbA_{1c} 8-10%), you and your patient can decide (and document) whether to upgrade the therapy or to accept the potential risks of an additional three months of diet and exercise therapy under suboptimal glycemic control. If the patient falls in the green zone (BG<140 mg/dL or HbA_{1c} 6-8%), diet and exercise therapy should be continued.

STEP 2: Add Oral Agent

If, after a three-month trial of diet and exercise, you decide that the patient's therapy should be upgraded, the next step is to add an oral hypoglycemic agent (OHA) to the diet and exercise regimen.

You should explain to the patient the pharmacological characteristics of the OHA that you have chosen to prescribe, emphasizing the risk of hypoglycemia with these agents; and provide the patient with the capabilities for self monitoring of blood glucose (SMBG). Unless you and your office staff have the time and expertise, SMBG training is best provided by a diabetes educator.

After three months on a maximum safe dose of an OHA (plus diet and exercise), your patient should be reevaluated according to Step 2 of the Stepped-Care algorithm. When patients fall in the red zone, they should be upgraded to treatment with insulin. If they are in the yellow zone, you should discuss (and document) the risks of continuing the same therapy or upgrading to treatment with insulin. Patients who are in the green zone can be continued on OHA, diet, and exercise therapy for additional three-month periods until that therapy is no longer effective (which will happen eventually in most patients).

STEP 3: Change to Insulin

Patients with NIDDM who do not maintain adequate glycemic control with a program of diet, exercise, and OHA should be started on insulin without delay. Patients should be reminded that diet and exercise are still important components of their overall treatment plan.

Before initiating insulin therapy, the patient must receive instruction about insulin dosage, timing, injection technique, hyper- and hypoglycemia, and SMBG from a diabetes educator. In addition, the patient should be counseled in diet-insulin interactions by a registered dietitian. You should be accessible by telephone when you start patients on insulin therapy or when adjusting insulin doses.

Once-daily injection of insulin in the morning is considered suboptimal therapy; since this schedule is not physiologic, it is unlikely to provide adequate glycemic control, and it is likely to cause afternoon hypoglycemia and excessive weight gain. In contrast, once-daily bedtime insulin in conjunction with daytime OHA is gaining favor as a temporary transition between OHA and full-fledged insulin therapy.[5]

Twice-daily injection of premixed insulin (eg, 70% NPH/30% regular) provides a reasonable chance for achieving adequate (yellow zone) or even excellent (green zone) glycemic control. The replacement insulin dose is 0.25 units per pound of body weight per day, with two-thirds of the dose given before breakfast and one-third before supper. Obviously, the dose of insulin must be adjusted according to the patient's SMBG results as well as to the diet and exercise program.

Fortunately, hypoglycemia is less of a problem with insulin-treated NIDDM than it is with IDDM. This is because most patients with NIDDM are obese and insulin resistant; they have normal counterregulatory hormonal responses to a falling blood glucose; and they rarely miss a meal. Nonetheless, it is prudent to recommend regular SMBG to all insulin-taking patients at least twice daily.

STEP 4: Intensive Insulin Therapy

If two injections per day of a premixed or split/mixed insulin preparation do not bring the blood glucose or HbA_{1c} concentrations into an acceptable range, or if they achieve "better" control (yellow zone) when you and your patient want the "best" control (green zone), the optimal currently available choice is intensive insulin therapy. The two major forms of intensive insulin therapy are multiple daily injections (MDI) of insulin and insulin pump therapy.

There are several resources required for intensive insulin therapy. A diabetes nurse specialist must always be available for intensive training on hypoglycemia awareness, prevention, and treatment; as well as for SMBG and insulin adjustment training and counseling. You or a member of your staff must be available 24 hours a day by telephone (hotline). Professionals in behavioral medicine and exercise physiology should be available on an ongoing basis. Since these resources are beyond the scope of most medical practices, many physicians refer candidates for intensive insulin therapy to a specialized diabetes care team.

The Glucose Challenge: An Aid to Control

The Glucose Challenge is a program that uses the wallchart on the reverse side as a visual aid to help patients achieve glycemic control. To participate in the Glucose Challenge, simply select five patients who have poorly controlled blood sugar levels and whom you wish to motivate. Through use of the wallchart, you'll be able to visually identify each patient's goal, and readily discuss the patient's current status and progress.

If you follow the guidelines for Upgrading Diabetes Therapy with the Stepped-Care Approach, you and your patients will be able to meet the Glucose Challenge.

1. Diabetes Control and Complications Trial Research Group. The effect of intensive treatment of diabetes on the development and progression of long-term complications in insulin-dependent diabetes mellitus. *N Engl J Med.* 1993;329:977.

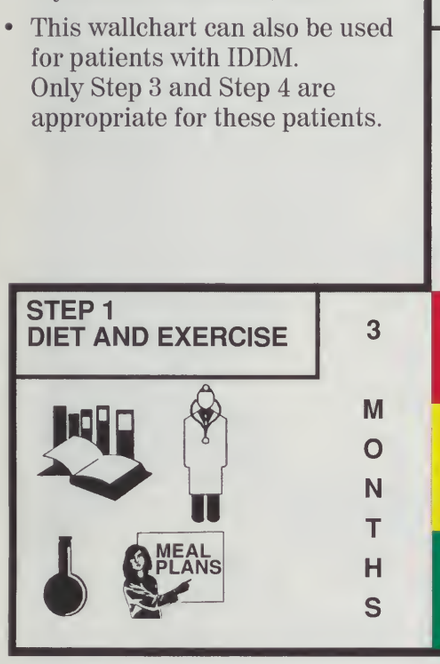
meeting THE GLUCOSE challenge

Upgrading Glycemic Control in NIDDM

A STEPPED-CARE APPROACH

The objective of the Glucose Challenge is to help patients lower their blood glucose and HbA_{1c} levels from an unacceptable (red) zone to the better (yellow) or best (green) zone in 6 months.

- Start by identifying patient's current treatment step.
- Use color key to determine glycemic control.
- Follow recommended action for identified level of control.
- Icons indicate resources you need (in addition to those from preceding steps) for upgrade; if you lack resources, refer.
- This wallchart can also be used for patients with IDDM. Only Step 3 and Step 4 are appropriate for these patients.



COLOR KEY

UNACCEPTABLE
BG >200 mg/dL; HbA_{1c} >10%

BETTER
BG 140–200 mg/dL; HbA_{1c} 8–10%

BEST
BG <140 mg/dL; HbA_{1c} 6–8%

RESOURCE KEY

- Physician — NAME ____ PHONE # ____
- Diabetes education — NAME ____ PHONE # ____
- Dietitian — NAME ____ PHONE # ____
- Blood-glucose monitoring
- Hotline Access
- Insulin
- Nurse/Educator — NAME ____ PHONE # ____
- Oral hypoglycemic agents

- Psychological counseling — NAME ____ PHONE # ____

INSTRUCTIONS

- Select five patients who have blood glucose levels above 200 mg/dL or HbA_{1c} > 10%.
- Using the Stepped-Care diagram, discuss with each patient his/her treatment, and goals for blood glucose and HbA_{1c} levels.
- Write in the date, the current step, and the patient's blood glucose and/or HbA_{1c} values in the upper left red square.
- Ask the patient to select a one-word identifier in lieu of the patient's name or initials, and write it on the chart.
- Schedule follow-up visits for 3, 6, 9 and 12 months.
- Schedule the laboratory tests before the patient's office visit.
- At the follow-up visits, fill in the patient's data in the appropriate square.
- If the patient's blood glucose value or HbA_{1c} value has improved by at least one zone (ie, from the red to either the yellow or green) at the 3-month visit, and is maintained or advanced at the 6-month visit and subsequent visits, you and your patient are meeting the Glucose Challenge.

• a traineeship in diabetes care and the older patient, through the Pennsylvania College of Podiatric Medicine, to help podiatric students gain a clearer understanding of the diabetic manifestations and complications involving the foot; and

• a referral system to the Pennsylvania Association of the Blind's eye care program.

New initiatives include:

• a community mobilization program in Erie;

• development of the "Taking Control" education and behavior modification program at Hamilton Health Center in Harrisburg; and

• a program to identify and address barriers that impact patient outcomes in rural primary care settings.

Regional activities

In addition to the activities of the Diabetes Control Program outlined above, the counties and districts (see map at right) offer types of assistance to people with diabetes. Each county or district is assigned a diabetes nurse consultant, who oversees community activities and works with health professionals and patients.

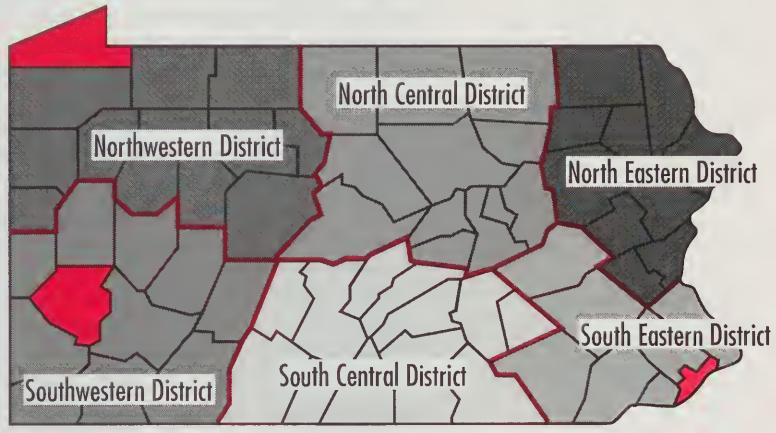
Allegheny County—In response to a need identified through a physician survey in Allegheny County, the county health department developed a diabetes education program for individuals who have neither the insurance nor financial means to attend a hospital-based program. The program is taught by the diabetes nurse consultant, with assistance from a public health nutritionist of the Chronic Disease Program. Participants are encouraged to make behavioral changes that will improve their diabetes control and prevent or delay complications.

The diabetes nurse consultant also provides updates and training on care of the patient with diabetes to staffs of nursing and personal care homes. Educational programs are a particular need in personal care homes because of limited access to professional staff development programs, and patient care is mainly provided by aides with minimal diabetes training.

In-service programs are conducted for teachers, school nurses, and other staff members at schools where there is a child with diabetes. These programs focus on management issues or handling emergency situations that may affect the student while at school.

As for Allegheny County hospitals, 13 have recognized outpatient diabetes education programs, and two others are in the process of setting up education programs that will meet national standards.

Pennsylvania Department of Health
Health Service Districts



Allegheny, Erie, and Philadelphia counties are independent of the districts.

Erie County—The diabetes nurse consultant in Erie provides education, resource, and support services to the county's 13 school districts, two prisons, and Senior Care Network. Hamot Medical Center and St. Vincent Medical Center both have state-recognized outpatient diabetes education programs which educated over 90 individuals with diabetes in the first six months of this year. Five other Erie County hospitals have inpatient education, support groups, and community services for their patients with diabetes.

The Erie County Diabetes Association is a local, independent agency that provides financial, emotional, and educational support for the diabetes community. As of July 1993, all diabetes efforts in the area are linked through the Erie County Diabetes Coalition. This initiative brings together over 60 health care providers, social service agencies, and individuals with diabetes to more efficiently and cost effectively meet the needs of the diabetes community. Through this group's efforts, over 17,000 "Diabetes Alert" brochures were distributed in Erie County.

Philadelphia County—Since 1990 the Philadelphia Department of Public Health has offered a free diabetes education program, "Staying Healthy with Diabetes," to its clients at seven district health centers. The program consists of a series of seven classes (plus graduation) and is scheduled at each health center between two and four times a year. Registered nurses teach the classes in conjunction with a diabetes nurse specialist. →

In May this year, a Spanish version of "Taking Control" was begun, using Kensington Hospital as its site. The Health Promotion Council's Latino Project Coordinator translated all materials into Spanish. Currently, classes are conducted in Spanish twice a year at District Health Center #6.

District Health Center #4 offers a unique diabetes education program for African Americans. Funded by the Pennsylvania Department of Health and administered by the Health Promotion Council of Southeastern Pennsylvania, "Taking Control" is a modified version of "Staying Healthy with Diabetes" that adds 15 minutes of exercise plus meal preparation to each class. Participants eat a healthy lunch together each week based on traditional ethnic foods and are given the recipes to take home.

The program includes a pre- and post-knowledge and attitude assessment, and follow-up for one year. Blood glucose, HbA1 c, cholesterol, weight, and blood pressure are monitored. Two registered dietitians from the Health Promotion Council teach the classes, held on Tuesdays and Saturdays.

Six Philadelphia hospitals have outpatient diabetes education programs that have been recognized by the Pennsylvania Department of Health for meeting the National Standards for Diabetes Education. Classes range in frequency from two programs a month to four programs a year. Three other hospitals are in the process of completing applications for recognition.

North Central District—The diabetes nurse consultant in North Central Pennsylvania provides assistance to hospitals interested in delivering programs or obtaining recognition for their outpatient diabetes education program. Two hospitals in the district have recognized programs, and one additional hospital is in the process of completing the recognition application.

Diabetes in-service programs are conducted for teachers, school nurses, and other school personnel in an attempt to provide a safe environment for the student with diabetes and to relieve the anxiety of the teaching staff. An annual newsletter is sent to all school nurses in the district to provide general and new information as it becomes available. Information is also included at camps and teen weekends sponsored by the American Diabetes Association.

Diabetes in-service programs, on the day-to-day management of diabetes and how to handle emergency situations, are provided to non-professional staffs of nursing homes, long-term care facilities, and group homes.

This district also employs a referral system, and assistance is provided to the Bureau of Blind and Visual Services in instruction and training of adaptive devices for diabetes care.

Northeastern District—This district's senior centers of the Area Agency on Aging provide patient education consultations and in-service to persons who have diabetes or who are caretakers. Assistance with diabetes education and resources is also provided to home health agencies, physicians' offices, long-term care facilities, and churches.

In-service education programs also help the nursing staff of the district's state correctional institutions to determine the needs of the population with diabetes at the facilities, and school district nursing supervisors and staff are working to improve the management and care of students with diabetes. The diabetes nurse consultant provides resources and educational materials to facilitate this process.

Nine hospitals in the Northeastern District have outpatient diabetes education programs recognized by the Pennsylvania Department of Health, and two others are in the process of completing recognition applications. Also, local assistance programs are used to help persons in need obtain diabetes services and educational resources.

The diabetes nurse consultant provided education, resources, and consultation to more than 5,000 individuals with diabetes, educators, institutions, and agencies during fiscal year 1993.

Northwestern District—Seven hospitals in Northwestern Pennsylvania have outpatient diabetes education programs recognized by the Pennsylvania Department of Health, and one more is currently in the process of completing the recognition application. Over 250 clients with diabetes were educated in these programs in 1993. The diabetes nurse consultant provides other hospitals with specific diabetes resources, references, and referral information on a regular basis.

The district's school nurses use the pamphlet, "Guidelines for the Student with Diabetes," as an individual care plan. Printed with assistance from the Western Pennsylvania Association of Diabetes Educators Chapter, the pamphlet is available to school districts in Western Pennsylvania.

Individuals with diabetes who need an eye examination, and who meet needs criteria, are helped through referrals to the

Pennsylvania Association for the Blind's diabetes eye care program. Individuals needing other diabetes-related services are directed to the appropriate community or state agency.

The district's diabetes nurse consultant teaches in-service education programs at community agencies, home health care agencies, schools, correctional institutions, and service organizations. In 1993, more than 1,350 individuals received assistance from the nurse.

South Central District—Collaborative efforts with health professionals to develop, implement, and present hospital-based outpatient diabetes education programs have resulted in the recognition of 12 hospitals in South Central Pennsylvania. Three additional hospitals are in the process of completing recognition applications, and 12 other institutions follow specific protocols for Veterans' Administration, rehabilitation, or smaller hospitals.

More than 1,000 people with diabetes have received education through these recognized programs. The district's diabetes nurse consultant provides in-service programs to other agencies and health professionals to meet their needs for education, referral, treatment, and management of clients with diabetes. These include hospitals, schools, school nurses, home health agencies, nursing homes, blind and visual services, the Office of Aging, correctional facilities, mental health/ mental retardation facilities, service organizations, and any group needing the resources provided through the Pennsylvania Diabetes Control Program. More than 2,000 individuals received assistance in 1993. In addition, the district has instituted a referral service for others afflicted with diabetes.

Southeastern District—After providing in-service programs for school nurses in seven counties of this district, a newsletter is sent to all school districts for dissemination. Information on Type I diabetes, coping strategies, family matters, peer pressure, research updates, and other school-related issues regarding diabetes is included, and when appropriate, the newsletter is shared with a student with diabetes and his or her family.

A nine-hour diabetes education program for African Americans has been conducted at district senior centers. Culturally sensitive educational materials are used, and ethnic foods are worked into meal plans. Participants have reported positive weight and blood pressure changes as a result of these programs.

Twenty-three hospitals in the Southeastern District conduct outpatient diabetes education programs recognized by the Pennsylvania Department of Health. Some address the needs of women with gestational diabetes, and many have meter loan programs, as well as individualized insulin and meal planning sessions. A newsletter keeps participants of these programs abreast of recognition issues, and provides updates on diabetes education and research. Over 830 clients with diabetes received education in these programs last year.

Also in the district, high school, college, and graduate students with diabetes-related education projects receive reference materials and community resource contacts, as well as creative and innovative ideas for project development.

Southwestern District—Like other districts, the goal in Southwestern Pennsylvania is to make the diabetes educator the primary community resource. Here, the diabetes nurse consultant offers consultative services to assist hospitals in developing quality outpatient diabetes education programs and support groups.

Eleven hospitals have recognized programs that meet national standards, four hospitals are working toward that goal, and six employ diabetes educators who follow the standards. Four physician and community-based programs use the standards.

Updates on diabetes education and care are provided to health professionals and the general public, and coalition building has begun in two counties. One of the identified needs was a program to provide diabetes supplies to financially needy individuals. Pharmaceutical suppliers cooperate by providing supplies for these individuals until other sources can be found. →

At California University of Pennsylvania, located within the district, a biannual seminar on chronic disease, developed by the Diabetes Control Program, reaches student teachers through the session, "Managing a Student with Diabetes." This forum was one of the original pilot sites for the national program, "Foundation for the Future: Understanding the Student with Diabetes."

The American Association of Diabetes Educators-Western Pennsylvania Chapter, the American Diabetes Association, and the Juvenile Diabetes Foundation work in collaboration with the district program to develop materials, review literature, and sponsor health fairs.

Pennsylvania Diabetes Academy

In cooperation with the counties and regions, the Pennsylvania Diabetes Academy, created in 1984 as a nonprofit, educational corporation affiliated with Pennsylvania Medical Society's Educational and Scientific Trust, is charged with meeting the need for quality professional diabetes education in the commonwealth.

Through a contract with the Pennsylvania Department of Health Diabetes Control Program, the academy:

- develops professional and patient education materials;
- conducts a three-day workshop for diabetes educators throughout the state;
- disseminates to health care professionals and the public current information on the management and technological advances that affect therapeutic aspects of diabetes;
- provides educational resources to health care professionals, agencies, organizations, consumers, and lay groups; and
- disseminates diabetes research results in cooperation with the Pennsylvania Medical Society and the Pennsylvania Osteopathic Medical Association.

In the past, PENNSYLVANIA MEDICINE has published "Standards of Medical Care for Patients with Diabetes Mellitus," highlighted individual efforts in diabetes care through Keystones of Public Health, and presented the results of the diabetes control and complications trial in "Upgrading Diabetes Therapy...Now That We Know It Matters."

To learn more about diabetes care, take the "Glucose Challenge" between pages 26 and 27.

...a promise to defend...

HERE ARE THE FACTS: Over 25% of America's Physicians were embroiled in a malpractice issue in the last 12 months. More than 80% of those malpractice allegations will be closed without an award for damages. Your professional reputation and your personal assets are on the line when your professional liability carrier is not both financially sound *and* experienced in the law and the judicial system.

WHEN THE ISSUES ARE LEGAL, NOT MEDICAL — when the allegations are frivolous, or highly emotional — you need a company and legal representation that understands the problem and has the experience to resolve the issue. The Medical Protective Company has specialized in defending doctors since 1899. Our legal and claims management experience is unmatched by any other insurer in the U.S.

FOR MORE INFORMATION on how we can protect your professional reputation and your personal assets, call your local Medical Protective General Agent at 1-800-344-1899.

**Presbyterian Medical Center designates this continued medical education activity for 2 credit hours in Category 1 of the Physicians' Recognition Award of the American Medical Association and the Pennsylvania Medical Society Membership requirement. Nine sessions, 18 credits.*

The Presbyterian Medical Center of Philadelphia is accredited by the Pennsylvania Medical Society to sponsor continuing medical education for physicians.

All faculty participating in continuing medical education programs sponsored by Presbyterian Medical Center of Philadelphia are expected to disclose to the program audience any real or apparent conflict(s) of interest related to the content of their presentation(s).

Understanding Generic Substitution

Jeff Greenawalt

Physicians are increasingly being called upon to allow substitution of generic equivalents when they prescribe. Managed care plans, state and federal government, health insurers, and others pressure physicians to allow generic substitution because they believe it will reduce cost; physicians just want to provide the best care for their patients.

This past summer, as the Pennsylvania Department of Public Welfare implemented its plan to only pay for generics, the issue surfaced once again. This review of how the system of generic substitution operates may help physicians understand the issues involved.

FDA approval

Like most states, Pennsylvania relies upon the Food and Drug Administration's (FDA's) list of acceptable generic substitutes. The key to understanding the system is understanding how the FDA creates this list, published in its *Approved Drug Products with Therapeutic Equivalence Evaluations,* commonly referred to as the "Orange Book." The introduction of the book explains creation of the list.

The FDA considers a generic drug to be the equivalent of the pioneer drug if the product is approved as safe and effective, is a pharmaceutical equivalent, is a bioequivalent, is adequately labeled, and is manufactured in compliance with applicable regulations. If all of these conditions are met, the FDA classifies the drug as *therapeutically equivalent,* awarding it an "A" rating. Obviously, some degree of extrapolation is required to determine therapeutic equivalence from these criteria.

Pharmaceutical equivalence occurs when two drugs have the same active ingredients, are of the same dosage form, and meet the same applicable standards (strength, purity, etc.). *Bioequivalence,* as defined by the FDA, means that the two products being compared display comparable bioavailability when studied under similar experimental conditions.

Bioequivalence forms the basis for an abbreviated new drug application (ANDA). Since the active ingredient in a medication was proven safe and effective when the pioneer drug was approved, an applicant seeking approval for a new brand of the same drug must only demonstrate bioequivalence. This greatly reduces the cost of the application and, at least in theory, contributes to the cost reductions experienced with generic products.

Bioequivalence studies are generally conducted with 12 to 24 normal male adults. Single doses of the test and reference drugs are administered, and blood or plasma levels are measured over time. If the rate of absorption differs by 20 percent or less, the FDA considers the medication bioequivalent.

Note, however, that the FDA generally requires an applicant to compute a two-sided test using a 90 percent confidence interval. Consequently, any product that had a mean response nearly 20 percent less or greater than the pioneer's mean response will probably fail this test. It is, therefore, not correct to state that the mean response for generic drugs is up to 20 percent different than pioneer products, when meeting the 90 percent confidence rule will likely make the variation much less.

Physician concerns/response

Concerns about this process were behind the creation of State Society Resolution 92-14: Information on Generic Drugs. The resolution called on the Society and the AMA to work with the FDA in providing physicians with specific data on the bioavailability and bioassay of generic drugs. The Society's Commission on Licensure and Practice of the Health Care Professions evaluated the resolution and concluded that the FDA's ANDA process does provide reasonable assurance of safety and efficacy of generic drugs. The commission reviewed information on the approval process and found that the actual variance between pioneer and generic medications is about 3.5 percent.

Satisfied with the FDA process, the commission focused its attention on the distribution of bioavailability data requested by the resolution. Its members noted that even with an ANDA, the amount of data produced far exceeds that which would be valuable to individual physicians.

The commission pointed out that for those physicians desiring access to this information on any generic drug, the FDA can provide a Summary of Basis of Approval, a synopsis of the bioequivalence review. To request a copy of this report, call (301) 443-6310

In addition, the commission noted that the U. S. Pharmacopoeia is incorporating *in vivo* bioavailability standards into its publications. Many Society members already subscribe to those publications.

The commission concluded that due to the quantity of data available on generic drugs and their general safety and efficacy, it is not practical, necessary, or cost effective to provide every physician with bioavailability and bioassay data on every generic drug.

Physicians appear generally satisfied with the effectiveness of most generic drugs. Occasionally, our members have reported some problems with generics. One must keep in mind that the FDA points out that even when it considers a generic therapeutically equivalent to a pioneer product, the generic may differ in shape, scoring configuration, packaging, excipients, expiration time, and some minor aspects of labeling. The FDA suggests that if a physician believes that these are important

considerations, the physician should specify a brand name in his or her prescription. This may become more difficult as many prescription payment programs insist on generic substitution as a cost-controlling measure.

State law

In Pennsylvania, the Generic Substitution law allows for a generic substitution if authorized by the prescriber. If a physician writes a prescription for a particular product and allows substitution, the pharmacist may substitute any generic rated "A" by the FDA. However, if the physician writes generically, the pharmacist may substitute any generic product he or she has in stock regardless of whether or not the FDA issued a determination of therapeutic equivalence by awarding an "A" rating to the product. This is a very important distinction since some problems noted by physicians may be the result of the use of a "B"-rated generic that may not perform in a manner that the physician expected.

For example, the FDA will only award an "A" rating to a substitute for a time-release medication that also uses a time-release formulation. A physician who writes for a brand of time-release medication should find that the patient received another time-release formulation. Conversely, the physician who writes generically could find that the patient received a medication without a time-release formulation.

The Pennsylvania Medical Society continues to believe that physicians must be allowed to make the best judgments for their patients free of interference from third parties. Unfortunately, others who finance the care may limit that choice.

Mr. Greenawalt is the Society's director of educational and scientific affairs.

Home Health Guidelines Reviewed

In response to a 1993 House of Delecates action, the Society's Commission on Licensure and Practice has reviewed federal guidelines and state regulations for home health care. The commission has recommended to the 1994 House that no changes are necessary to the current law.

In question was the time frame for reporting to physicians. Current law mandates physician oversight of home health care agency representatives (i.e., visiting nurses) for payment to the agency. After careful review, the commission concluded that current law clearly addresses the question: Physicians must review and acknowledge the patient's plan of treatment every 62 days.

Because the law is complicated in many areas, physicians should refer to the state regulations for clarification. Also, the AMA has published, "Guidelines for the Medical Management of the Home Care Patient." Call (800) AMA-3211 for information about the guidelines.

YOCON®
YOHIMBINE HCl

Description: Yohimbine is a 3a-15a-20B-17a-hydroxy Yohimbine-16a-carboxylic acid methyl ester. The alkaloid is found in Rubaceae and related trees. Also in Rauwolfia Serpentina (L) Benth. Yohimbine is an indolalkylamine alkaloid with chemical similarity to reserpine. It is a crystalline powder, odorless. Each compressed tablet contains (1/12 gr.) 5.4 mg of Yohimbine Hydrochloride.

Action: Yohimbine blocks presynaptic alpha-2 adrenergic receptors. Its action on peripheral blood vessels resembles that of reserpine, though it is weaker and of short duration. Yohimbine's peripheral autonomic nervous system effect is to increase parasympathetic (cholinergic) and decrease sympathetic (adrenergic) activity. It is to be noted that in male sexual performance, erection is linked to cholinergic activity and to alpha-2 adrenergic blockade which may theoretically result in increased penile inflow, decreased penile outflow or both.

Yohimbine exerts a stimulating action on the mood and may increase anxiety. Such actions have not been adequately studied or related to dosage although they appear to require high doses of the drug. Yohimbine has a mild anti-diuretic action, probably via stimulation of hypothalmic centers and release of posterior pituitary hormone.

Reportedly, Yohimbine exerts no significant influence on cardiac stimulation and other effects mediated by B-adrenergic receptors, its effect on blood pressure, if any, would be to lower it; however no adequate studies are at hand to quantitate this effect in terms of Yohimbine dosage.

Indications: Yocon® is indicated as a sympathicolytic and mydriatic. It may have activity as an aphrodisiac.

Contraindications: Renal diseases, and patient's sensitive to the drug. In view of the limited and inadequate information at hand, no precise tabulation can be offered of additional contraindications.

Warning: Generally, this drug is not proposed for use in females and certainly must not be used during pregnancy. Neither is this drug proposed for use in pediatric, geriatric or cardio-renal patients with gastric or duodenal ulcer history. Nor should it be used in conjunction with mood-modifying drugs such as antidepressants, or in psychiatric patients in general.

Adverse Reactions: Yohimbine readily penetrates the (CNS) and produces a complex pattern of responses in lower doses than required to produce peripheral a-adrenergic blockade. These include, anti-diuresis, a general picture of central excitation including elevation of blood pressure and heart rate, increased motor activity, irritability and tremor. Sweating, nausea and vomiting are common after parenteral administration of the drug.[1,2] Also dizziness, headache, skin flushing reported when used orally.[1,3]

Dosage and Administration: Experimental dosage reported in treatment of erectile impotence.[1,3,4] 1 tablet (5.4 mg) 3 times a day, to adult males taken orally. Occasional side effects reported with this dosage are nausea, dizziness or nervousness. In the event of side effects dosage to be reduced to ½ tablet 3 times a day, followed by gradual increases to 1 tablet 3 times a day. Reported therapy not more than 10 weeks.[3]

How Supplied: Oral tablets of Yocon® 1/12 gr. 5.4 mg in bottles of 100's NDC 53159-001-01 and 1000's NDC 53159-001-10.

Outpatient Addiction Services Expand in Pittsburgh

Gwendolyn Schultz

Since the mid-1970s, Lee H. McCormick, MD, Pittsburgh, has been involved with the treatment of persons afflicted with chemical or alcohol addiction. Presently, he is the medical director of drug and alcohol recovery services, South Hills Health System; medical director of chemical abuse services, Braddock Medical Center; and associate medical director of the Center for Chemical Dependency Treatment, St. Francis Hospital.

Lee H. McCormick, MD, is a pioneer in the treatment of persons affected by drug or alcohol dependency—he worked in addiction medicine before it was a certified specialty. As Dr. McCormick describes it, he became involved in addiction medicine "by accident." He was asked to serve as the primary treatment physician in a clinical pilot drug and alcohol program through what is now the South Hills Health System.

When he began, he was unsure about the logistics of addiction and the treatment of these illnesses. But as he continued to help individuals, he understood the disease and the reasons his patients continued to use these substances. In 1986, the first year such certification was available, Dr. McCormick received his certification through the American Society of Addiction Medicine.

The stigma against addiction

Dr. McCormick defines an addicted person as, "someone who continues to use a substance although they know it is wrong and harmful to them." There has always been a stigma placed on alcoholics and drug abusers. Dr. McCormick thinks society views the disease of addiction differently than it does other diseases because the public views addicts as choosing to take these substances and harming themselves.

"People don't look at people with emphysema and asthma who smoke as bringing it on themselves. They don't look at diabetics who gain weight, eat anything they want, and end up in the hospital as bringing it on themselves. They don't look at cardiacs who won't lose weight, eat salt, and don't do the right things who end up in the hospital over and over again as bringing it on themselves. But, they think alcoholics and drug addicts bring it on themselves."

But, he says the stigma against addictive disorders is slowly fading because more people are recognizing addiction as a disease and not looking at it as a form of voluntary behavior or chosen habit.

Addiction—a public health snowball

Dr. McCormick says addiction and its effects are at the root of many other public health problems. Societal violence—including child abuse, spousal abuse, and homicide—AIDS, auto accidents, and infant mortality statistics many times can be traced back to addiction and the problems created from substance abuse. This is why more attention needs to be focused on treating addiction and expanding present programs.

"If you look at those problems, and look at how intimately connected they are to alcoholism and drug addiction, you could make some inroads in the treatment of addiction. You could reduce the public health costs of these other problems dramatically."

Dr. McCormick

The misconceptions of addiction

Although physicians are aware of drug and alcohol addiction, many say they

Ms. Schultz is assistant director of marketing and development for the Society's Educational and Scientific Trust. This article is one in a series, begun in January 1993 and ongoing through 1994, sponsored by the Trust's endeavor to address public health needs, Keystones of Public Health.

don't see more than a few cases in their own practices and medical settings. But Dr. McCormick and many researchers disagree. Studies and statistics show that addiction is widespread and does not affect only one socioeconomic area, one geographic area, or one profession.

Dr. McCormick explains, "The problem is the misconceptions that the public has are carried over into medical schools: that the alcoholic or the drug addict is the guy sitting in a doorway with his brown bag and wine, or the addict is the guy who is in the back alley 'shooting up.' They don't understand that a lot of alcoholics and addicts are working in Pittsburgh, Harrisburg, Philadelphia, and any city you name. They are going to work everyday, and while they may not be functioning well, they *are* functioning. These are the people that the medical students need to see, so that they get over that misconception of the derelict and the drug addict or the alcoholic."

Dr. McCormick says, "I think addiction is something that cuts across all lines, and although teaching of addiction has improved, it still does not get the attention that it deserves, considering its importance and prevalence."

Too little funding

The greatest problem in combating addiction is the lack of funding, according to Dr. McCormick: "There are enough treatment facilities, but the funding is grossly inadequate. It's even drying up." The result, he says, is the inability to treat patients *adequately*.

He adds that those in charge of delegating public health funding want to save money today. "They don't understand that sometimes you have to spend a little money today to be able to spend less tomorrow...to treat these patients to their full extent now, rather than spending more money in the future when they re-enter the program because they were not in stable recovery from their illness," he says. "We have to be able to provide enough funding to follow that individual as an outpatient for as long as necessary. This is where we are lacking."

Outpatient treatment—forging ahead

Dr. McCormick has been involved with addiction treatment at the South Hills Health System for almost 20 years, serving as the primary provider of addiction treatment for hundreds of individuals.

Traditionally, addiction treatment has been performed on an inpatient basis, with few services being rendered as outpatient. Currently, Dr. McCormick is in the process of changing that. Being involved with the South Hills Health System, the Braddock Medical Center, and the Center for Chemical Dependency Treatment at St. Francis Hospital in Pittsburgh, he has many resources and opportunities available to him. He and other physicians are trying to create a full-service outpatient addiction treatment *network*.

The goal of the network, he says, would be to "offer a number of locations and a number of [addiction treatment] providers so that we can be in the backyard of anyone who needs help." The network would link the services of six different treatment facilities: St. Francis-Central, St. Francis-New Castle, St. Francis-Main, South Hills Health System, Braddock Medical Center, and Charter Outpatient.

The project has been underway for approximately six months. Once the network is established, physicians providing chemical dependency treatment, nurses, therapists, and counselors will be available to patients at each of the centers.

Presently, Dr. McCormick is administering the progress of the network by developing appropriate protocols and procedures. He hopes to move traditionally inpatient services, such as detoxification treatment, to outpatient clinics; eventually, he wants to create an addiction treatment "manual" which will be the "outline and blueprint" for future outpatient treatment facilities and networks.

Physician involvement

Dr. McCormick feels physicians need to become involved with issues surrounding addictive disorders in two ways. First, they need to address addiction in their medical practices each day with each patient. Dr. McCormick emphasizes that in many addiction cases, the addict will not outrightly admit to having a problem and may also deny any addictive activity. It is up to the physician to spend time with each patient and get to the root of the problems in order to make the proper diagnosis, he says.

A member of the Pennsylvania Attorney General's Medical/Legal Advisory Board on Drug Abuse since 1989, and a board member of the Foundation for a Drug-Free Pennsylvania, Dr. McCormick also encourages physicians to be a strong voice in legislative activities so they may affect future changes in the medical environment. He concludes, "There are a number of things physicians need to do. First, they need to know their legislators, both Pennsylvania and federal; second, they need to communicate with them; and third, they need to stay with it." ⬡

"There are enough treatment facilities, but the funding is grossly inadequate. It's even drying up."

—Lee H. McCormick, MD

Society Venture Ever Growing

Maria T. Montesano
Assistant Managing Editor

The State Society has welcomed a staff clinical pharmacist and new services for physicians to its ever-growing Center for Professional Drug Education and Information.

In a first-of-its-kind venture in the U.S., the Pennsylvania Medical Society in 1993 joined with the Pennsylvania Department of Public Welfare to meet drug utilization review (DUR) requirements imposed by the Omnibus Budget Reconciliation Act (OBRA) of 1990. Today, the Society's Center for Professional Drug Education and Information offers even bigger and better things for physicians, including consultation by a staff clinical pharmacist.

Brenda K. Trimmer joined the Society on September 1 as the center's clinical pharmacist. She received her B.S. in science with an emphasis in biology from Morehead State University in Kentucky and graduated cum laude with a B.S. in pharmacy from the Philadelphia College of Pharmacy and Science.

A Pennsylvania native, Trimmer has a varied background in hospital, community, and long-term care pharmacy. She recently spent five years in Georgia as a member of a multidiscipline consulting firm, advising long-term care administrators and nurses to assure compliance with state and federal regulations.

When she returned to Pennsylvania in 1993, Trimmer was a consultant pharmacist with Pharmacy Corporation of America, again working extensively with long-term care, including drug utilization evaluation and comprehensive drug regimen reviews. Trimmer, the recipient of a number of honors and awards for her pharmaceutical expertise, is a fellow of the American Society of Consultant Pharmacists.

As the center's clinical pharmacist, she is responsible to review patient profiles and analyze data, and for the educational arm of the retrospective DUR under contract with the Department of Public Welfare.

The center received its first set of physician profiles at the end of October. Trimmer explains that any intervention—which, she stresses, is strictly educational and *not* punitive—would include utilization comparison between peers and written information on drug classes.

"From there," she says, "if misuse is severe enough, the physician may be called to discuss utilization and answer any questions he or she might have." Further, if necessary, the center would conduct face-to-face interviews, which could be pharmacist-to-physician or physician-to-physician, depending on the situation. "And if there is a need to educate a number of physicians in one geographical area," Trimmer says, "the center will offer group sessions, which will provide CME credits."

But the center's job extends well beyond basic education. According to Trimmer, she and the center can help physicians by providing:

- information on medications, including dosage, side effects, and clinical applications;
- drug identification—if a patient has medication in a bottle, the center can identify over 45,000 prescription and over-the-counter drugs based on imprint of tablet/capsule;
- patient-specific dosing guidelines;
- information on international drugs;
- analysis of drug interactions for up to 15 drugs simultaneously and of drug-food interactions;
- patient information describing a specific injury, disease, or drug, customized for each patient and available in English, "easy-to-read" English, and Spanish; and
- wall charts and pocket cards comparing costs of drugs, such as the one on the opposite page.

Next year, the center will jointly sponsor with MSA/MEDNET two seminars—one in Philadelphia and one in Pittsburgh—on "Effective Prescribing for Minority Patients." A first program was held in Harrisburg in September. These programs seek to enhance physicians' understanding of the prescribing practices affecting physicians serving minority populations. CME credit will be provided.

Also, the center is working with the Pennsylvania Liquor Control Board to publish pamphlets and posters on drug-alcohol interactions, to be distributed largely through the commonwealth's State Stores.

Suggested Reading

Review these PENNSYLVANIA MEDICINE articles for more information:

- "Pennsylvania Takes Lead in Drug Education Venture" (July 1993): Explains the Society's role in the state's drug utilization review program and overviews how OBRA requirements will affect Pennsylvania physicians.
- "DUR Program Moving Ahead in Second Year" (October 1994): Provides an update of the state DUR program, including state as well as State Society efforts.

Also, the magazine has published three cost comparison charts in 1994: nonsteroidal anti-inflammatory drugs (February), quinolone antibiotics (April), and broad-spectrum antibiotics (June).

Professional DRUG EDUCATION & INFORMATION
Pennsylvania Medical Society

The center is still in development and interested in hearing what other projects would be helpful to physicians. Call (800) 228-7823 or (717) 558-7750 with your ideas, for further information, or to access the center's many services.

COMPARING CALCIUM CHANNEL BLOCKERS

Physicians across the state agree that they need an unbiased source of information on prescription drugs. Based on the results of a statewide survey, Pennsylvania physicians are especially interested in reliable drug cost information. In response, the State Society's Center for Professional Drug Education and Information has periodically published in PENNSYLVANIA MEDICINE cost information for medications in various drug classes. The fourth drug class in this series is calcium channel blockers.

Calcium channel blockers are most commonly prescribed for their antihypertensive effects; however, specific drugs may have indications for use in angina pectoris, arrhythmias, and subarachnoid hemorrhage. Physicians should base selection of a calcium channel blocker on indication, clinical experience, patient convenience, side effects, and cost.

The chart below presents the average wholesale price of a one-month regimen plus a $3.50 dispensing fee. While prices vary from pharmacy to pharmacy and region to region, this chart provides physicians with a means for making relative comparisons among commonly prescribed calcium channel blockers. The drugs are listed in alphabetical order by brand name.

For a free pocket card or wall chart version of this information on calcium channel blockers, call the Society's Center for Professional Drug Education and Information at (717) 558-7750 or (800) 228-7823. *NOTE: if you have previously requested other drug classes, you will receive this information automatically.*

The Center for Professional Drug Education and Information was established to assist in retrospective drug utilization review for Pennsylvania Medicaid prescriptions and to provide Pennsylvania physicians with an alternate, non-biased source of information on prescription medications. The Society is working with the Pennsylvania Department of Public Welfare, and Health Information Designs, Inc., on this program. Our goal is to help physicians make better prescribing decisions through education.

Calcium Channel Blockers—Cost of 30 Days of Therapy

BRAND NAME	GENERIC NAME	ADULT DOSING	QUANTITY	BRAND COST	GENERIC COST
Calan	Verapamil	40 mg TID	90	$32.25	$27.11
		80 mg TID	90	$44.86	$23.35
CalanSR		120 mg QD	30	$29.23	$29.23
		240 mg QD	30	$40.80	$37.61
Cardene	Nicardipine	20 mg TID	90	$38.76	NA
		30 mg TID	90	$59.57	NA
CardeneSR		30 mg BID	60	$40.22	NA
		45 mg BID	60	$61.82	NA
Cardizem	Diltiazem	30 mg QID	120	$53.76	$45.38
		60 mg QID	120	$82.26	$68.90
CardizemSR		60 mg BID	60	$49.66	$45.02
		120 mg BID	60	$72.28	$64.68
CardizemCD		120 mg QD	30	$29.15	$29.96
		240 mg QD	30	$52.30	$33.18
Dynacirc	Isradipine	2.5 mg BID	60	$34.03	NA
		5 mg BID	60	$48.25	NA
Norvasc	Amlodipine	2.5 mg QD	30	$37.51	NA
		10 mg QD	30	$62.34	NA

Do You Speak "Medispeak?"

David Woods

While "Medispeak" has certainly been proven to have a place in medicine, it is a language that patients and their families may not understand or appreciate.

Every profession has its jargon, a word that derives from Middle English *gargoun*—twittering of birds. Among insiders, that twittering serves as a specialized and often useful "in" language; even though it's not the vocabulary of everyday speech, it has its place. The problem arises when legalese, journalese, or other forms of jargon are used in communicating with—or in the presence of—outsiders. Then, intentionally or not, it can become exclusionary or threatening. Moreover, where it is meant to impress, or even oppress, it can become a powerful and dangerous weapon.

This is especially true in medicine. While jargon isn't unique to medicine, "medispeak"—or as the *Oxford Companion to the English Language* (OCEL) dubs it, medi*cant*—certainly isn't new. The medieval physician Arnold of Villanova suggested that his thirteenth century colleagues mask their scientific limitations with lengthy Latinate locations.

Physician and novelist Michael Crichton calls this "obligatory obfuscation," noting, in an article in the *New England Journal of Medicine,* that this cannot be due to defensiveness since, "while articles in medical journals may often be stuffy, stodgy, weak and equivocal, dense, impenetrable, and forbidding, physician authors who are criticized in those same journals invariably respond in strong, brisk, and often stinging prose." Revealing that he is not immune to jargon himself, Crichton concludes that "medical obscurity may now serve an intragroup recognition function like a secret fraternal handshake."

Acknowledging that studies of surgeons have shown that jargon used during surgery actually improves the communication of factual information with clarity and brevity, the OCEL goes on to note that "ability to understand and use the jargon of a group is a badge of identification...It indicates that the user is conforming to the norms of the group, as well as accepting and understanding [its] basic ideas, principles, and practices."

So, while physicians readily understand that cephalalgia means headache and emesis means vomiting, patients might not; in fact, hearing those words might induce the very conditions they describe. Yet sometimes, jargon, when it consists of euphemism or obliqueness, can be a kindness to the patient: better to learn, for instance, that senility is "decreased propensity for cell replication" or that an alcoholic is suffering from "chronic hyperingestation of ethynol."

Of greater concern, I think, is the medical "we." Like the royal or the editorial we, it is designed to cloak communication in an aura of respectability and received wisdom...as in "We see a lot of that" or, worse, "How are we today?" The impersonal "emphysema in the corner bed"—the reference to the disease, as opposed to the person with the disease—is in the same league. The same holds true for referring to human beings as cases of this or that. And the "Hi, Mary, I'm *Doctor* Smith" isn't far behind.

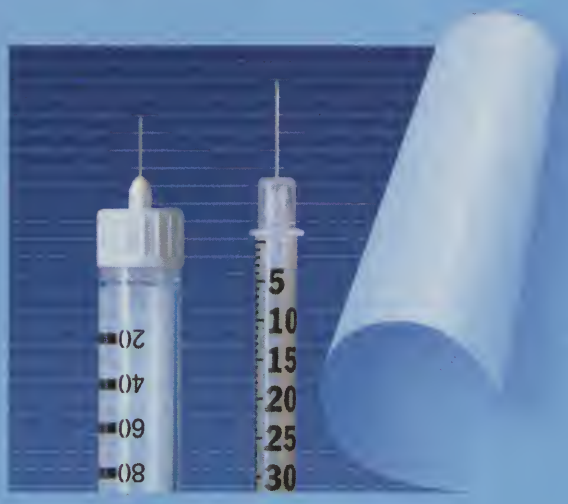
My colleague, John Gartland, MD, author of the recently published *Medical Writing and Communicating*, says that the characteristics important to good personal communicating are empathy, trust, honesty, and caring. Physicians, he says, should treat patients as they themselves would want to be treated. He points out that "the use of medical jargon, appearing hurried, or giving patients the sense of begrudging them adequate time to be heard...are the most commonly encountered barriers to effective communication between physicians and patients in face-to-face encounters."

The solution to all this? If you think you might be suffering from medispeak, the humorous answer is to seek out a psychosemanticist who will straighten out any linguistic ailments you might be suffering from.

More realistically, speak simply, personally, equitably, and kindly. It's a vital part of the therapeutic process. And *you'll* probably feel better, too. ⬡

Mr. Woods, former editor and publisher of the* Canadian Medical Association Journal, *is president of Healthcare Media International, Inc., Philadelphia, and a frequent commentator on health care issues.

Which insulin needle would you choose?



Thanks to new NovoFine®30, the choice is obvious. Shown here at actual size, NovoFine®30 is the thinnest and shortest insulin needle in the world — smaller than standard insulin needles. And each needle is electropolished and coated with silicone to optimize smoothness. NovoFine®30 was designed with your comfort in mind. But don't take our word for it...

compare NovoFine®30 to your current insulin needle and see what a big difference a little needle can make!

NovoFine®30

Disposable Needle

The World's Finest and Shortest Insulin Needle

Sick Care to Total Care: Vertical Integration

Except for the decision you made to practice medicine, the decisions you make when faced with the question of whether or not to sell your practice probably will be the biggest of your career. *Your State Society offers a wealth of information on this topic through its new subsidiary, the PennMed Member Services Company (PMSCO). For more information, call (717) 558-7750.*

Vertical integration has been sweeping the commonwealth. One trend is for the managed care plan to purchase a hospital or hospital group and a number of physician practices, thus placing the insurance company, hospital, and doctors into a single network. Most large hospital systems are buying medical practices and suddenly, smaller hospitals—those not expected to be players—are also looking into buying practices.

Know what you want

Before you start negotiating, determine your wants, needs, and goals, and develop a strategy to get what you want. Think long and hard about the entire situation. You may not want to sell at all. Look at the alternatives to selling—especially any integration opportunities that allow you to retain some control of your practice.

A good consultant and lawyer can help you determine your goals, including whether you actually want to sell. Don't inadvertently trade off all of your bargaining chips for nothing or for the things that will not matter in the long run.

Make sure that, if you join, you will be able to practice medicine the way you want to, or at least in a way that is tolerable to you. Make sure you will see the patients you want to see and practice in the area that is best for you. Find out what amount of control you will have in your office, what changes will be made to your lifestyle, and what your administrative responsibilities will be.

If two organizations have made you offers, study them carefully. One may be offering you a lot of money and asking you to vertically integrate into a network in which people who are not doctors will be telling you what to do, while the other may be offering you less money but a "partnership," in which you will be making decisions.

Be aware that if the price being offered for your practice is, in all honesty, unrealistic, the only way that the buyer will realize the expected rate of return is to lower your salary, if not now, then later. In short order, your employer may determine that you are simply too costly a provider, or you may find that your new business cannot support itself because it has paid out too much money and/or it has too much debt. The last thing you want to do is join a network that is bound to go belly-up.

Beware of promises

Beware of blue-sky promises that are made by negotiators who, unbeknownst to you, have no authority to keep those promises.

Some negotiators will make any promises that they need to make in order to get you to sell your practice. Consider that putting up a building—which at least one large area buyer is promising—is probably going to cost a lot more than it will take to buy your practice. If that promise is made, how is it going to be kept and over what time frame?

If you are relying on a promise made to you, be sure that the promise is reduced to writing in the contract. Further, make sure that you set a firm time frame in which vital promises must be kept, establish financial penalties to trigger if they are not kept, and make sure you can get out of the deal, if necessary.

Setting a time limit is important. You may be trapped in a bad situation and be able to get out, but if you have been in the network too long, all your former patients will have found a new doctor, and all your current patients will belong to the network. If you leave, where will you get a patient base? Financial penalties work because you can evoke the penalty and use the money you receive to accomplish what was promised.

The Health Care Group

Understand that things will change

Understand that, once you sell your practice, you become someone else's employee, and your rights and obligations will be established in your contract, on which you may have no vote. Before signing the contract, be sure that you can live with it.

There will be changes in the way you practice. For instance, to increase revenues, your new employer may want you to work 50 hours a week, as you did before, but now devote all your time to patient care and none to administration.

You will have to live or die by the decisions made by someone else. Be sure that the entity you are joining has a professional manager. If a hospital runs your practice like a hospital, it may be run into bankruptcy.

If the entity you join has multiple management layers, your patients could suffer. In a managed care environment, if you get only one fee regardless of what you do, your variable cost patients—the sicker people—may get the short shrift because of administrative overhead, rather than the care they need.

Make sure there is a real administrative infrastructure. You might be very unhappy if you cannot affect changes you deem necessary simply because there is no one in the organization to whom you can point and say, "It's your job to fix this."

Always take a closer look

Of course, these changes may be acceptable to you, especially if what you really want or need is a large sum of money. If you sell, particularly after a bidding war, you will get cashed out immediately when the money is good.

But also be aware that if you sell your practice and agree to receive an annual salary of, for example, $130,000, your payment may be in terms of $106,000 guaranteed plus up to another $24,000 if you meet or exceed certain performance criteria.

Statement of Accreditation: Hahnemann University is accredited by the Accreditation Council for Continuing Medical Education (ACCME) to sponsor continuing medical education programs for physicians. Hahnemann University designates each hour of attendance at these activities as 1 credit hour of Category 1 of the Physician's Recognition Award of the American Medical Association.

OBRA '93 EXTENDS SELF-REFERRAL RULES

Federal legislation that will take effect January 1, 1995, called OBRA '93, extends the current prohibition against physician self-referral of Medicare and Medicaid patients—now applicable only to clinical laboratories—to a wide range of other ancillary facilities owned by physicians, including:

- physical therapy services;
- occupational therapy services;
- radiology or other diagnostic services;
- the furnishing of durable medical equipment;
- parenteral and enteral nutrients, equipment, and supplies;
- prosthetics, orthotics, and prosthetic devices;
- home health services;
- outpatient prescription drugs; and
- inpatient and outpatient hospital services.

The prohibition to these additional services will be effective for referrals made after December 31, 1994. Exceptions in such areas as in-office ancillary services, prepaid plans, publicly traded entities, bona fide employment relationships, and other arrangements are clarified in the new law.

Susan Weber, JD, the Society's assistant general counsel, says, "We have received a number of calls from members and are helping to guide them as this deadline approaches." She adds, "Physicians should be careful to comply with the requirements of federal safe harbor regulations and Stark amendments in reviewing medically related investments."

For detailed information about OBRA '93, call (800) 228-7823 or (717) 558-7750, extension 490.

JOINT COMMISSION RECEIVES CLIA '88 DEEMED STATUS

The Health Care Financing Administration (HCFA) has announced that clinical laboratories accredited by the Joint Commission on Accreditation of Healthcare Organizations will be "deemed" to meet the Clinical Laboratory Improvement Amendments of 1988 (CLIA '88).

Beginning January 1, 1995, the joint commission will conduct surveys for CLIA certification in both freestanding labs, as well as labs affiliated with hospitals and other health care organizations. Since CLIA regulations require that surveys be conducted every two years, labs affiliated with a health care organization will not be surveyed at the same time the organization is surveyed. However, they will be surveyed during the organization's full survey under the functional portions of the manual—such as leadership and improving organizational performance—as would other departments or services within the organization.

Also, according to the commission, labs that are part of one organization can be surveyed at the same time, requiring only one survey application and one fee.

For more information, call the joint commission at (708) 916-5783.

MEDICARE NEWS

PROVIDER INQUIRY NETWORK EXPANDING SERVICES

Pennsylvania Blue Shield has announced expansion of the Medicare Provider Inquiry Network to include electronic bulletin board and mail services. The new services are being implemented to increase the provider's "electronic advantage" and reduce the time and money they spend conducting Medicare business, Blue Shield says.

New capabilities include electronic filing of claim review requests, requests for general information and copies of payment vouchers, and address changes, as well as electronic RSVPs to Medicare Electronic Services and Medicare Professional Services provider seminars.

Providers may also continue to check the status of their claims and review Medicare fees, limiting charges, and Medicare policy through the network. All services are free of charge to Medicare participating providers via an 800 telephone number.

Current network users will automatically receive access to the new services; others will need to sign up for it. Direct questions about the network to Medicare Electronic Services at (717) 763,6722; press option 1.

ANSWERS OFFERED TO QUESTIONS ON NEW COVERAGE

Coverage of oral chemotherapeutic agents by Medicare, effective January 1, 1994, has raised a number of questions among physicians. To answer these questions, The Travelers, Durable Medical Equipment Regional Carrier (DMERC) for Region A, offers the following:

- Completed Certificates of Medical Necessity should be forwarded to the supplier, not HCFA or the DMERC unless specifically requested. The supplier is required to submit the completed certificate along with a completed HCFA 1500 form to the DMERC for specific items as outlined in the Supplier Manual.
- Physician-owned pharmacies are precluded by law from working through Medicaid and Medicare. Physician-owned pharmacies are not permitted to dispense prescriptions for oral chemotherapeutic drugs covered by the Medicare program.
- Nolvadex (Tamoxifen) tablets are not covered because there is no equivalent injectable form of the drug. Each of the four covered oral chemotherapeutic drugs has both an oral form and an equivalent injectable form.
- The limiting charge does not apply to oral chemotherapeutic drugs. The five percent non-participating physician differential does not apply to such oral chemotherapeutic drugs.

Direct other questions to The Travelers at (717) 735-9445.

AHCPR FUNDING PRIMARY CARE STUDY

A study of physicians who provide primary care in a managed care setting will examine whether their type of training affects resource utilization, medical outcomes, and costs. The $580,000 study is supported by the U.S. Public Health Service's Agency for Health Care Policy and Research (AHCPR) and Bureau of Health Professions, Health Resources and Services Administration.

The prospective study will compare differences in resource utilization, quality of care, and total costs during a one-year period for adult patients of family practitioners, general internists, and subspecialty internists providing primary care in a group model health maintenance organization (HMO).

Quality of care will be compared for five common chronic conditions: diabetes, hypertension, asthma, low back pain, and depression.

NEWSMAKERS

Delynne J. Myers, MD, assistant professor, University of Pittsburgh School of Medicine, and director of outpatient service, Division of Hematology and Bone Marrow Transplantation, has received the Leo H. Criep, MD, Excellence in Patient Care Award from the Pittsburgh Cancer Institute.

Gordon L. Kauffman Jr., MD, professor of surgery and cellular and molecular physiology, Penn State's Milton S. Hershey Medical Center, was named vice chair, Department of Surgery.

Jeffrey B. Wetstone, MD, program director, Williamsport Hospital and Medical Center Family Practice Residency Program, was appointed to the Healthcare Task Force of the Rural Development Counsel of the Commonwealth of Pennsylvania.

Dr. Park

Sang B. Park, MD, chairman, thoracic and cardiovascular surgery, St. Francis Medical Center, Pittsburgh, was elected to the board of directors of two St. Francis Health System affiliate corporations—St. Francis Health Care Services and St. Francis Diversified Corporation.

The American Academy of Ophthalmology has announced the following as 1994 Senior Honor Award recipients: **Gary C. Brown, MD**; **George W. Blankenship, MD**; **William E. Benson, MD**; **Peter J. Savino, MD**; **Marlene R. Moster, MD**; and **Donelson R. Manley, MD**. The award recognizes individuals who have made a significant contribution to ophthalmology through presentations at the academy's annual meeting and for service on academy committees.

Medical College Hospitals, Elkins Park Campus, has appointed **James T. Reinprecht, MD**, program director and liaison for the Medical College of Pennsylvania Internal Medicine Residency Program.

R. Michael Buckley, MD, chief of infectious diseases, Pennsylvania Hospital, Philadelphia, has been named associate director of clinical programs, Division of Infectious Diseases, Jefferson Medical College of Thomas Jefferson University, Philadelphia.

The Graduate Hospital, Philadelphia, has appointed **Scot A. Fisher, DO**, chair, Department of Radiation Oncology.

Michael W. Bowman, MD, an orthopedic surgeon from Pittsburgh, has authored a chapter, "Compression Neuropathies of the Foot and Ankle" in a recent publication, *Current Practice of Foot and Ankle Surgery, Volume II*. Dr. Bowman has also been named an associate editor of *Foot and Ankle International* and a reviewer for the *Journal of the American Academy of Orthopaedic Surgeons*.

Jonas T. Johnson, MD, an otolaryngologist-head and neck surgeon, is a receipient of the Distinguished Service Award from the American Academy of Otolaryngology-Head and Neck Surgery, for his long-term unrenumerated contributions to the academy.

Monongahela Valley Hospital has named **Nirmal D. Kotwal, MD,** director of laboratories, and **Dennis J. Mateya, MD**, medical director of the physical, occupational, and speech therapy departments.

Allegheny Valley Hospital, Natrona Heights, has elected **Michael D. Miller, MD**, chair, Department of Surgery.

Stuart G. Tauberg, MD, a cardiologist, was elected a fellow of the American College of Physicians.

Michael E. Thase, MD, medical director of the Mood Disorders Module, University of Pittsburgh Medical Center's Western Psychiatric Institute and Clinic, presented an analysis of the undertreatment of depression at the August annual meeting of the American Psychological Association.

Burton Singerman, MD, Upper St. Clair, has been named director of psychiatry, Center for Psychiatric Medicine, St. Francis Medical Center, Pittsburgh.

Alberto J. Larrieu, MD, cardiothoracic surgeon, Albert Einstein Medical Center, Philadelphia, participated in a charitable mission to Guadalajara, Mexico, implanting pacemakers in indigent patients. Dr. Larrieu also led a group of Mexican cardiologists as an instructor in pacemaker implantation.

John H. Glick, MD, director, University of Pennsylvania Cancer Center, Philadelphia, was appointed president elect of the American Society of Clinical Oncology.

Albert J. Stunkard, MD, emeritus professor of psychiatry, University of Pennsylvania Medical Center, Philadelphia, has received the American Psychiatric Association's Distinguished Service Award.

University of Pittsburgh Medical Center has appointed **Jorge Rakela, MD,** chief of transplantation medicine, director of hematology in the Division of Gastroenterology and Hematology, and professor of medicine.

Jeff Stanley, MD, emergency physician, Hospital of the University of Pennsylvania, Philadelphia, appeared on National Public Radio's "Morning Edition." Dr. Stanley discussed violence in America.

Herbert C. Mansmann Jr., MD, professor of pediatrics and associate professor of medicine, Jefferson Medical College of Thomas Jefferson University, Philadelphia, was honored by the American Lung Association of Delaware and Chester counties for his efforts in creating "Camp Superstuff" for the area's American Lung Association affiliates.

Dr. Lannutti

In *Newsmakers* of the September 1994 issue of PENNSYLVANIA MEDICINE (page 43), a picture of Leonard H. Finkelstein, DO, was inadvertedly used with information regarding Pat A. Lannutti, DO.

Dr. Lannutti—who is affiliated with the Philadelphia College of Osteopathic Medicine, and who has received the 1994 Christian R. and Mary A. Lindback Foundation Award—is pictured above.

FEASIBILITY OF DOCTOR-OWNED HMO UNDER STUDY

Private practice physicians throughout Pennsylvania have contributed more than $250,000 to fund a study that will determine whether or not a doctor-owned and operated health maintenance organization (HMO), called Pennsylvania Physician Healthcare Plan, Inc. (PPHP), is feasible in the state.

According to Gary Brown, MD, president of PPHP and an ophthalmologist based in Wyndmoor, the feasibility study began in October and will last for 14 weeks. The study will examine legal, financial, and marketing areas for PPHP, as well as poll physicians throughout the state as to whether they would support the establishment of such an organization.

The study will be performed by The Garvey Group, a Merrick, New York-based health care consulting firm, which has assisted physicians in Connecticut, Oklahoma, and New Jersey to organize their own statewide HMOs.

Exec quoted in *Modern Healthcare*

In related news, State Society Executive Vice President Roger F. Mecum expressed support for physician-owned networks in the August 29 edition of *Modern Healthcare.*

The article outlines a number of attempts in the northeast to form physician-owned networks, including PPHP, and explains, "Such new physician-controlled organizations are forming in response to worries that insurance entities rather than medical professionals are controlling medical care decisions."

Mecum emphasized that point to reporter Karen Pallarito, saying, "Our serious concern is that larger and larger insurance conglomerates are gobbling various pieces of the delivery system." He was also quoted at the end of the article, advising physicians "to try to get a little bigger."

Thomas Gabuzda, MD, president of the Philadelphia County Medical Society; John J. Nevulis, MD, vice president of PPHP; and Fred Palace, MD, president of the Medical Society of New Jersey, were also interviewed for the article.

COUNTY NEWS

MERCER COUNTY SPONSORS CONGRESSIONAL DEBATE

More than 80 people attended the first-ever congressional debate sponsored by the Mercer County Medical Society, held on September 14 in Sharon. At separate ends of the podium were Philip English (R) and William Leavens (D), both vying for the 21st District seat vacated by gubernatorial candidate Tom Ridge.

The health care debate turned into more of a discussion, with both candidates agreeing on a number of major points. Neither would:

- entrust their medical and psychological history to the U.S. government or any other organization that may want such records, as envisioned by the Clinton and Gephardt plans;
- support employer mandates for providing health insurance;
- support a single-payer system;
- support sanctions against physicians, as detailed in the Clinton and Gephardt plans; or
- support taxing health benefits.

Instead, they both favor a plan that would gradually reform health care. Both believe the U.S. has the best health care in the world, agreeing that some changes are needed, but not a complete overhaul.

More specifically, Leavens, former executive director of the Shenango Valley Chamber of Commerce, supports a plan that would create but not mandate health alliances, while English, a former Erie city controller, supports a plan that would make it easier for health care agencies to compete.

The one concept on which they did disagree is the best way to reduce health care costs. Leavens favors managed competition, but English says managed competition has not been proven to reduce costs and, instead, favors working to improve the current system.

Joseph A. Giordano, MD, vice president of the county society, moderated the health care debate, the first of its kind between the two candidates.

ALLIANCE NEWS

DONATION HELPS GEORGIA YOUTH AFTER SUMMER FLOODS

The Pennsylvania Medical Society Alliance (PMSA), through its Emergency Assistance Fund, donated $1,000 to the Georgia Medical Association Flood Relief Fund following floods resulting from Tropical Storm Alberto this summer.

Since the Red Cross met basic community needs, the Alliance's contribution focused on the needs of children: The funds supported the "Take Charge" project, a free mental assessment and support session for children regarding their reaction to the flood.

More than 100 Dougherty County (Georgia) children received packets of school supplies at "Take Charge," a free mental assessment and support session offered after the summer floods. The Pennsylvania Medical Society Alliance donated $1,000 to support the program.

According to Mary Linda Cotten, president of the Dougherty County (Georgia) Alliance, the money was used for school supplies, assembled and distributed to the more than 100 children who attended the "Take Charge" program. Additional packets of supplies were donated to the public school system.

In a note to PMSA, Cotten says, "I want to thank you for the financial support that the Pennsylvania Medical Society Alliance gave us to follow through with this project. Distributing school supplies at this mental assessment program met many needs of the children."

PMSA—the first alliance in the nation to establish an Emergency Assistance Fund to help people in areas hit by natural disasters—has been recognized by the AMA Alliance "for its concern and caring of physicians and their families and its fellowman." The fund, established in 1989 following Hurricane Hugo, has donated more than $13,000 to areas hit by natural disasters.

NEW CANCER AGENTS UNDER STUDY

Shadyside Hospital, Pittsburgh, and a consortium of nine other hospitals in three states have received approximately $1 million from the National Cancer Institute to evaluate the effectiveness of a group of new cancer agents. "Clinical trials" will determine which patients should receive such drugs or combination of drugs to combat a variety of cancers.

Investigators in the consortium are currently looking at the drug topotecan to determine its effect on lymphomas, and they will soon begin testing the impact of 9-amino-camptothecin on breast cancer. Both are part of a new class of anti-cancer drugs that may help inhibit tumor growth.

All of the hospitals in the consortium are linked by a computer system, which describes, step by step, the procedures investigators need to follow while conducting the trial. The grant will last for four years.

HMSS NEWS

CONFERENCE FOCUSING ON HEALTH CARE TRENDS

The American Medical Association is hosting the Fifth Annual *Interactions* Medical Staff Leadership Conference, January 13-15, 1995, in San Antonio, Texas. This year's theme is, "Physician Empowerment and Teamwork in a Changing Environment."

Discussion will focus on emerging trends in health care delivery—such as physician/hospital relationships, economic competition, physician autonomy, resource allocation, and regulatory constraints—and how best to manage them. Special emphasis will also be placed on developing and refining strategic planning, team building, and communication skills.

For more information or to register, call the AMA at (800) 621-8335.

CALL FOR PROPOSALS

PROGRAM WORKING TO IMPROVE ACCESS TO CARE

The Robert Wood Johnson Foundation has issued a call for proposals for a second round of planning grants for the $14 million "Reach Out" program. The program is a national effort to mobilize private physicians to improve access to care for medically underserved Americans.

In August, planning grants were awarded to 22 private physicians' groups in 21 communities throughout the U.S. to develop new approaches for delivering medical care to people who currently have difficulty obtaining it. Those grantees received development awards up to $100,000, and based on progress made during the first year, they will then be eligible to receive three-year implementation grants averaging $200,000.

The second round will include up to 28 additional physician-initiated partnerships. A workshop for interested applicants will be held on January 20, 1995, with an application deadline of *March 14, 1995.* Recipients of the second round of planning grants will be announced on August 1, 1995.

For more information about the grant program, or to request application materials, call the Reach Out National Program Office at (401) 453-5120.

Clinical Scholars Program

The foundation has also issued a call for applications for its 1995 Clinical Scholars Program, which is designed to allow young physicians committed to clinical medicine to acquire new skills and training in the non-biological sciences important to medical care systems.

The program offers two years of graduate-level study and research as part of a university-based, post-residency training program, and is open to U.S. citizens training in any of the medical/surgical fields, including psychiatry, pediatrics, obstetrics/gynecology, and family medicine.

For more information about the grant program, or to request application materials, call the Clinical Scholars Program Office at (609) 243-5919. *Deadline for application: March 1, 1995.*

MCP PROGRAM ARCHIVING WOMEN IN MEDICINE

The M. Louise Carpenter Gloeckner, MD, Summer Research Fellowship Award Committee of the Archives and Special Collections on Women in Medicine, the Medical College of Pennsylvania (MCP), Philadelphia, is accepting applications for summer 1995 research using materials in the archives and special collections.

The archives and special collections are the most comprehensive collection of materials in North American on women physicians. The archives house the business and academic records of MCP since its founding in 1850, and the special collections contain personal papers of women physicians; the records of women's medical organizations, schools, associations, and hospitals; and a collection of historic photographs.

One or two grants of up to $1,500 each for four to six weeks of research in the archives will be made to applicants selected by the award committee. One grant is reserved for medical students, the second for all other eligible applicants.

For an application and complete description of the fellowship, write to MCP at 3300 Henry Avenue, Philadelphia, PA 19129. *Deadline for completed applications is February 17, 1995.*

UNIVERSITY OF PENNSYLVANIA HEALTH SYSTEM

Pennsylvania PRO Wins New Contract

I find it hard to believe that it's already well over two years since my article about the "possible" changes in store for the peer review organization (PRO) program. One of the major changes discussed in that article was the announcement by the Health Care Financing Administration (HCFA) of the proposed creation of Clinical Data Abstraction Centers (CDACs). Plans called for five CDACs which would use the new Uniform Clinical Data Set (UCDS) to abstract cases for physician review. The intent of the UCDS was to achieve greater uniformity in the screening of records from state to state.

Well, a lot has changed during the past two years. HCFA has decided to scrap the UCDS, not only because it was so detailed that it was not worth the extensive amount of time it took to abstract a record, but mainly because it was mostly intended as a tool for individual case review, which is gradually being phased out.

A new abstraction system, called the Medicare Quality Indicator System (MQIS), is designed to develop disease-specific quality indicators that will be used to profile providers' patterns of care. The intent is to design a methodology for the CDACs to collect data that is consistent with the new direction of the PRO program, the Health Care Quality Improvement Program (HCQIP).

Another change was in the number of CDACs—from the five originally proposed, to two. Both will be located in the east, within driving distance of HCFA's Central Office in Baltimore.

Not long after HCFA announced its intention to create CDACs, the Keystone Peer Review Organization (KePRO) formed a joint venture with DynCorp, Inc.—which had significant experience with government contracts—for the purpose of bidding on a CDAC contract. KePRO owns 45 percent of the joint venture corporation, named Dyn/KePRO.

HCFA issued a request for proposals on July 19, 1993, for the two CDACs, and Dyn/KePRO submitted proposals for both contracts on September 24, 1993. Almost a year later, on August 26, 1994, we learned that Dyn/KePRO was successful in its bid for what is referred to as the Central Zone Contract and includes 24 states and territories. This new five-year contract was effective on September 1, 1994, with an implementation date set for January 1, 1995.

KePRO is very pleased with this opportunity because it keeps at least one physicians' organization closely involved in the medical record collection/abstraction process, and we are one of only two original organizations in a brand new program.

Although it will be a challenge, this new contract will allow us to be innovative, as we proved we could be several years ago when we implemented intervening care and ambulatory surgery review—both of which were pioneered by KePRO.

The author, Donald E. Harrop, MD, is president of the Keystone Peer Review Organization.

PHYSICIANS WANTED

Western Pennsylvania—Board Certified or prepared emergency physicians needed for staffing a community hospital emergency department near the Ohio/Pennsylvania border. Please send CV to P.O. Box 99431, Pittsburgh, PA 15233-0431.

Pennsylvania—Physician group seeks full-time and part-time physicians for an emergency department of community hospitals in central and western Pennsylvania. Please send resume to P.O. Box 99431, Pittsburgh, PA 15233-0431.

Pittsburgh, Pennsylvania—Penn Group Medical Association (PGMA), a 100-physician multi-specialty group practice affiliated with the largest HMO in Pittsburgh, is seeking BE/BC physicians in: family practice, internal medicine, pediatrics, ob/gyn, and psychiatry. We are formally affiliated with major teaching hospitals and leading community hospitals in Pittsburgh. PGMA serves eight ambulatory care centers, all conveniently located near cultural, educational, recreational, and corporate activities. Excellent salary, and fringe benefits. For confidential consideration contact: Angela Lascola, Health-America, 5 Gateway Center, Pittsburgh, PA 15222, or call collect (412) 553-7502.

Emergency Physicians—Emergency Physician Associates is seeking quality ED physicians for a variety of practice opportunities. Director and staff positions are available. EPA contracts with hospitals in NJ, PA, MD, and NC for the provision of emergency medicine, urgent care and industrial/occupational health services. Our client hospitals are located in rural to urban areas with patient volumes ranging from 10,000 to 75,000. At EPA we offer physicians competitive compensation, flexible schedules and shifts, occurrence-based malpractice insurance, a variety of practice settings to choose from, cooperative working environments, and supportive medical directors and corporate staff. Interested candidates may contact EPA at 1-800-848-EPA-1.

Primary care physicians for Cincinnati, Ohio. Rated #1 city in the nation. Large, successful physician owned organization offers autonomy, excellent income/pension, signing bonus, benefits, call, vacation, and relocation. (800) 880-2028.

Solo board certified family physician seeking BE/BC non-smoking associate in family practice. No ob. Modern office, good staff, good salary. Partnership. James Thomas, MD, Eastwood Professional Center, Greensburg, PA 15601; (412) 837-5257.

Lancaster County, Pennsylvania—BE/BC FP to join active six physician practice in attractive small community in southcentral Pennsylvania, with quality schools and proximity to cultural centers. Full range of family practice experience in modern facility. No ob. Competitive salary and benefit package leading to long-term association. Contact Gary Scibal, MD, 562 W. Second Ave., Lititz, PA 17543. (717) 626-2167.

BC Family Medicine Physician? Avoid business hassles, become a hospital employee. Practice medicine in beautiful northwestern Pennsylvania. Call schedule of 1:10 or better. Flexible practice style. $110,000+ benefits year one. Shared profits after year one. For more details, contact Tony Almond at 800-776-5776.

Explore the Possibilities! We are currently seeking primary care physicians specializing in family medicine, pediatrics, occupational medicine, internal medicine, and ob/gyn for a variety of group practices throughout the midwest and New York state. Surgical and subspecialty physicians are also needed for a variety of locations. We represent practices in all types of settings in communities of every size. New opportunities become available every month. Whether a practice change is →

Do you know someone who needs nursing care in their home?

We have a special person to take care of your special person.

Are your patients entitled and/or eligible for Medicare benefits? If you are not sure call **MEDICAL PERSONNEL POOL** and we will help you get the answer. Bear in mind that a person need not be a Social Security recipient or over 65 to receive Medicare services. People who are disabled for 2 years or more are eligible as are people who are in dialysis for 6 months of longer. **MEDICAL PERSONNEL POOL** provides a full range of **HOME HEALTH SERVICES,** as well as private duty nursing. We provide most of these services in the home as well as in the hospital and nursing home.

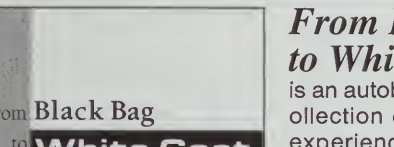
Caring physicians — working for you



From Black Bag to White Coat

is an autobiographical recollection of one doctor's experiences in medicine throughout the 20th century. While many of today's changes in health care portray medicine as just one more business, there was a time when it was more of a mental, emotional, and scientific frontier. It is this era of medicine which Dr. Farrar has captured in his book. Dr. Farrar is a fascinating storyteller who writes with inspiration and enthusiasm. His book should be read with earnest eyes and an anxious heart for the possibilities which lie ahead.

The cost of the book is $12.95 plus $3 s/h. To order a copy, please contact the Trust office at **(800) 228-7823, extension 431.**

of the Pennsylvania Medical Society

777 East Park Drive
P.O. Box 8820 • Harrisburg, PA 17105-8820

This lawyer is an employment law expert, speaks plain English, and doesn't charge an hourly rate.

This lawyer is *Employment Law: A Guide for Pennsylvania Physicians,* a publication of the Pennsylvania Medical Society. Inside you'll find in-depth, up-to-date information on wages and overtime, discrimination and sexual harassment, OSHA, unemployment compensation, and much more. *Employment Law* is written by attorneys who specialize in this area of law and is reviewed by State Society legal staff. Annual updates keep the information current and accurate.

Employment Law is currently priced at $40 for members ($75 for nonmembers and $100 for non-physicians), less than the price you'd pay for an hour with your lawyer. Information about updates will be available soon. To order *Employment Law,* call the State Society's Department of Physician Services at (800) 228-7823.

This lawyer doesn't charge an hourly rate, speaks plain English, and always has updated information.

This lawyer is *Laws and Regulations Affecting Medical Practice,* a publication of the Pennsylvania Medical Society. And, while it can't argue your case in court, it can give you current, in-depth information about 47 areas of law and regulation that concern physicians: antitrust, confidentiality, infectious waste, physician licensing, living wills, and much, much more. *Laws and Regulations* is written by experienced attorneys and reviewed by State Society legal and policy staff. And it's updated annually so you always have the latest information.

Laws and Regulations is priced at $65 for State Society members ($130 for nonmembers, $195 for non-physicians), equal to about one phone call to your lawyer. The charge for updates is $30 ($60 for non members, $90 for non-physicians). To order *Laws and Regulations,* call the State Society's Department of Physician Services at (800) 228-7823.

The Asthma Crisis

Richard L. Green, MD

Caught up in the frenetic scramble for position in the managed care revolution, physicians can easily understand how a second, more subtle skirmish could have been overlooked. Tactical maneuvering has been intense in what I call "The Battle for the Asthma Patient."

The asthma patient has been around for some time. Even Maimonides cared for a few. It seems, however, that the medical profession is finally recognizing their existence, or that they have chosen now to come out of the closet. For years a battle has raged over the proprietary subspecialty rights to treatment of the asthmatic. Pulmonologists have felt that the lung, and all the diseases therein, belong to them. Besides, being internists, the inpatient care of the asthmatic crisis fell into their hands and onto their pulmonary intensive care units.

The allergist, on the other hand, felt that asthma is basically a hypersensitivity disease and could be dealt with through avoidance of allergic triggers, pharmacotherapy, and immunotherapy. And, of course, the generalists—represented by the family practitioner, internist, and pediatrician—feel that they do just fine, thank you, in controlling their patients with twitchy airways.

What has catapulted the asthmatic into sudden visibility is the "Asthma Crisis." It seems that the prevalence of asthma is on the rise. The number of people who have asthma has increased 60 percent between 1979 and 1989, representing all ages, races, and sex groups. Ten to 12 million Americans, or four percent of the population, suffer from this disease, and an estimated 3.9 million children under the age of 18 comprise this group.

Asthma accounts for 10 million missed school days and 200,000 hospitalizations each year. Even more disturbing is that the number of asthma deaths has increased since 1979 to nearly 5,000 a year. The asthma death rate is three times greater among African Americans than among Caucasians. Acknowledging the crisis, the National Heart, Lung, and Blood Institute (NHLBI) issued its expert panel's recommendations for the "Diagnosis and Management of Asthma"(see box in left margain).

And thus began anew the frenzied scramble for the asthma patient turf. Hospitals reasoned that if there were so many asthma patients out there, then it would make sense to establish "asthma centers" within their corridors. Pulmonologists have finally recognized that allergy contributes to their patients' wheezing, and have incorporated skin testing into their evaluations of the asthma patient and established their own "asthma and lung centers." And the allergist, not to be outdone, has included the word asthma in his or her corporate title, i.e., "Asthma and Allergy Clinic."

The upshot of all this chessboard-like maneuvering should be better care for the asthmatic. This heightened visibility should enable us all to diagnose earlier and more accurately. Care should be more accessible to the asthma patient because of more resources being devoted to them. And care should be better if NHLBI recommendations are followed.

So, who are the rightful purveyors of care to the asthma patient in the managed care environment? Who are the true descendants of Maimonides? I propose that we all are—the generalist and the specialist—and that the net result will be better care for the asthmatic, with reduced morbidity and mortality.

The generalist can acquire the skills of pharmacotherapy; the pulmonologist is expert in medical management of the mild, moderate, and severe asthmatic. And, because allergy plays such a prominent role in so many patients with asthma, the allergist can identify environmental triggers through allergy skin testing, draw up a program of environmental avoidance, initiate drug therapy, and initiate immunotherapy if indicated.

Hyposensitization, or immunotherapy, possesses the unique ability to make our patients' airways less allergic to the airborne allergens to which they are sensitive. In 1994 there now exist good, double-blind control studies that prove the efficacy of immunotherapy in patients allergic to tree, grass, and ragweed pollens, house dust mites, molds, and cat dander.

While the practice of medicine in the future will certainly be different than today, the outlook is bright for the asthma patient who can look forward to many breakthroughs in our understanding of the genetics and pathophysiology of his or her disease and to dramatic new therapies.

NHLBI Recommendations

These guidelines, developed by the National Heart, Lung, and Blood Institute, suggest the following for physicians treating the asthma patient:

1) recognize the role of inflammation in asthma and use mast cell stabilizing or corticosteroid inhalers daily and regularly to prevent attacks;

2) use bronchodilator inhalers on an as-needed basis only, and not every day all the time, because there is some evidence that the increased death rate is due to abuse of inhaled sympathomimetic drugs;

3) relegate theophylline to a back-up position rather than a first-line drug because of its high potential for cardiovascular and central nervous system side effects;

4) educate patients in the use of peak flow meters to quantitatively assess their airway disease;

5) use spacers for those who cannot properly use their metered dose inhalers;

6) prepare patients with crisis plans so that they know how to react to worsening airway compromise and may initiate the use of oral corticosteroids if indicated; and

7) educate the patient in the pathophysiology of the disease and in the environmental factors that can trigger exacerbations.

Dr. Green is an allergist with the Allergy and Asthma Associates of Pittsburgh.

CONGRESS JUST CUT DOCTORS' RETIREMENT SECURITY BY $34,000 A YEAR– AND WANTS $2,700 MORE IN TAXES NOW.

Harry R. Tyler, Principal

Last year, Congress cut 36% from your retirement plan[1]. That means higher income taxes now[2], less money in your retirement fund to grow–and $34,000 less annual income when you retire[3].

The impact on your retirement will be dramatic–unless you act now. To have $100,000 a year of retirement income you will need at least $1.3 million in retirement assets[4].

Find out how you can protect your retirement security and increase your own plan contributions–without increasing contributions or costs for other employees.

Call 1-800-79-TYLER for a free copy of the Tyler Consulting Physician Retirement Security Checkup–including a 20-page booklet entitled, "Building a Secure Future." Call today.

TYLER *Consulting* Incorporated

1-800-79-TYLER
(610) 344-0900 FAX: (610) 344-7656

The following assumptions are based on a physician age 45; earning between $140-250,000 per year; retiring at age 65; annual investment growth of 10%; and a 20 year payout (8%) at retirement.

1. Beginning 1/1/94, maximum compensation eligible for contribution to a profit-sharing plan is $150,000–36% less than $235,840 before. Instead of a $30,000 contribution, only $22,500 can be contributed–7,500 less annually.
2. $7,500 additional income is taxed at 36% (marginal tax bracket based on $140-250K of taxable income.) The annual increase in your tax is $2,700.
3. $7,500 less is invested for 20 years. Assuming 10% annual return, your retirement fund is reduced by $429,000– cutting retirement security by $34,000 every year.
4. To maintain a $100,000 income (inflation-adjusted at 4%) for 20 years requires $1,348,674 in retirement assets.

SOMETIMES THE BEST DEAL IS THE ONE YOU HAVEN'T HEARD ABOUT.

Maybe you haven't heard about the Medical Inter-Insurance Exchange (MIIX). After all, we're a relatively new player in Pennsylvania's medical professional liability insurance marketplace.

But ask your counterparts in New Jersey, and you'll find we've been getting rave reviews since we wrote our first policy there in 1977. We're proud that 98 percent of our 9,000 insured physicians renew their policies each and every year. With such an outstanding track record, we must be doing something right.

Perhaps it's our **innovative products**, such as our new **$500,000** HIV benefit that provides income protection — at no additional charge — for physicians who become HIV positive. We were the first professional liability insurer in the state of Pennsylvania to offer this coverage.

Or maybe it's our **commitment to service**, which includes 24-hour customer assistance and a claims staff that's the best in the industry. Our insureds know that MIIX makes sense financially, too, considering our outstanding discounts for new and part-time practitioners. We also offer flexible premium payment plans that help you manage your money.

Because MIIX is a **physician-owned company**, you can be assured that everything we do is designed with your best interests in mind. Call us today so you can join your peers who are already benefiting from the MIIX difference.

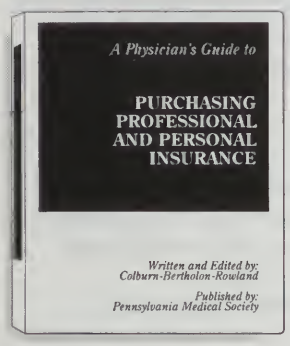
If you're looking for the right group practice coverage, why not ask the people who wrote the book on it?



When they needed to know about insuring you and your group practice, the Pennsylvania Medical Society didn't just want us to act as a guide.

They asked us to write it.

We're Colburn-Bertholon-Rowland (CBR). The endorsed broker for the Pennsylvania Medical Society. And while "A Physician's Guide to Purchasing Professional and Personal Insurance" isn't the catchiest title, if you're up against the complex issues of insuring a group practice, you'll want it on your bookshelf. It deals with everything from life insurance to disability coverage to professional liability insurance. Oh, and health coverage. Homeowner's insurance. Even long-term care. And there's a lot more to it.

Endorsed by the PA Med. Society

And with CBR, there's a lot behind it. We've spent the last 65 years giving doctors our expertise on all forms of insurance and group benefits.

When it comes to individual and group practice insurance, we're the people to call on.

If this sounds like the kind of help you can use, call us at 800-551-4504 (Media) or 800-327-1550 (Pittsburgh). Your CBR rep will do more than give you a hand. The first time you meet you'll receive our book – a $30 value – *free*. And if you want more answers, just ask.

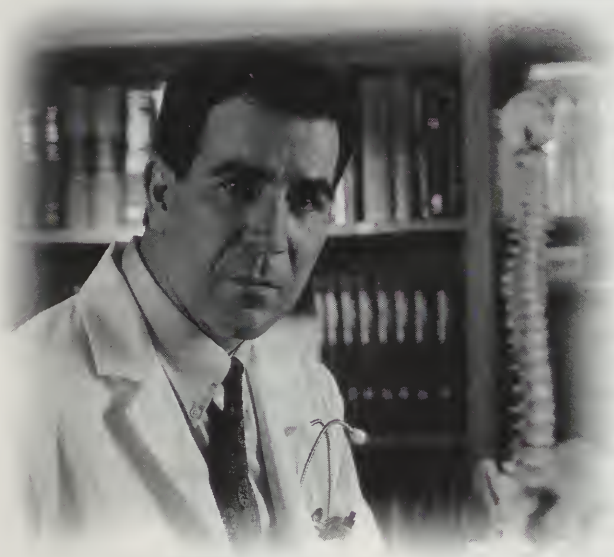
"Promises.

Every company makes them. Few keep them. Pennsylvania physicians



are lucky to have a resource like PMSLIC. I know. Early in my career I practiced in the Midwest. I saw colleagues get burned by a company promising the same medical liability protection for less money. I was pretty young, but luckily I didn't go with them. Unfortunately, my best friend, Phil, did. When his carrier went under, it looked as though a lot of good people would go down with it. Phil just got out by the skin of his teeth. A couple of our friends weren't so lucky. When I came to Pennsylvania, I checked out all my options. Know what? No company can match PMSLIC's record, or offer the same value-added services. Through the years, we've all heard many new carriers guarantee us big savings. But I can't see the value of saving a few dollars in the short run, if it means risking my future. Hey, if you don't believe me, give Phil a call."

MEDIGRAM

IRRC REJECTS WORKERS' COMP REGS, SEEKING REVISIONS: The Independent Regulatory Review Commission (IRRC) on November 29 rejected proposed regulations implementing Pennsylvania's new workers' compensation law. Among the commission's concerns: 1) time of payment for medical bills in cases where determination of medical necessity has been made, but the insurer is challenging; and 2) limitations on the list of designated health care providers. The Department of Labor and Industry had 10 days to revise the bill for IRRC process and approval; otherwise, the regs move back into the legislative process. At press time, no decision was made on department action. Prior to IRRC's decision, the Senate Labor and Industry Committee recommended disapproval of the regs, and the House Committee on Labor Relations declined to address the issue.

LIMITED LIABILITY BILL OFFERS NEW OPTION FOR PHYSICIANS: Senate Bill 1059, passed by the legislature in November, allows physicians to use a "limited liability company" as an alternative to the more traditional partnership or professional corporation. Such a company offers the principal advantage of a corporation—limited liability for the owners—coupled with the flexibility and tax advantages of a partnership. The State Society strongly supports the bill, which provides another organizational option for some physicians. Included in the bill are Society amendments requiring that only physicians may own limited liability companies that provide medical care. Specifically, the professional ownership requirements that apply to professional corporations also apply equally to limited liability companies. The governor is expected to sign the bill.

LAWSUIT, CONFUSION SEND HIO BACK TO THE DRAWING BOARD: The Commonwealth of Pennsylvania said it would revise bid specifications on its request for proposals for the HealthChoices health insurance organization (HIO), which was to have taken effect the first of this month. Proposals had been received from 12 companies, and a decision by the Department of Public Welfare had been anticipated as early as August. However, a suit filed in Commonwealth Court by advocates for Medical Assistance recipients and two coalitions of hospitals threatened to block the program. State officials said the bid specifications were being revised in light of a proposed settlement of the lawsuit. The HIO would affect about 650,000 low-income patients in Southeastern Pennsylvania.

ALABAMA COURT RULING ECHOES PENNSYLVANIA OPINION: A U.S. Circuit Court of Appeals ruled in November that the Alabama Medical Assistance Program must pay Medicare copayments and deductibles for the elderly poor who are eligible for both programs. In doing so, the court adopted in its entirety the opinion issued by the U.S. Third Circuit Court of Appeals in the suit filed against Pennsylvania Department of Public Welfare (DPW) Secretary Karen Snider by the State Society and James R. Regan, MD. A third appeal is pending in Virginia. DPW reportedly has been waiting for results in the other cases before deciding whether to seek U.S. Supreme Court review of the *Snider* decision. DPW has until approximately the end of the year to file such a petition. Meanwhile, the State Society has applied for a court order that would outline what DPW must do to comply with the Third Circuit Court's decision.

MEDICARE CUTS WOULD BE DEVASTATING, AMA SAYS: News reports on November 23 quoted leaders of organized medicine who testified against proposed Medicare cuts. AMA Executive Vice President James S. Todd, MD, reportedly testified that if Medicare cuts are made for health reform or deficit reduction, "the result in either case would be the devastation of Medicare as we and our patients know it." In related news, Medicare premiums for patients will increase to $46.10 a month on January 1.

DYN/KEPRO MARKS OFFICIAL START OF BUSINESS: Dyn/KePRO—a new joint venture between KePRO and DynCorp—held ribbon-cutting ceremonies on November 30 in York to mark its official start of business. The organization will serve as one of the first clinical data abstraction centers in the country under new HCFA rules.

SOUND PROTECTION

Other companies may change their tune every few years, but Princeton's dedication to quality service, aggressive claims handling and a strong financial base remains constant.

One key to insurer stability is capable, consistent management. At Princeton, we have a team of experts with the continuity that leads to sound decision-making every day.

The result: an unwavering commitment to the doctors we protect.

Princeton. It's worth it!

Lessons in Humility

John W. Mills, MD
Medical Editor

"Our delegates dealt squarely with the issues—something that contrasts sharply with the election campaigns going on outside our hall."

In the eyes of this ex-officio member—your Ninth District trustee—this year's annual meeting of the House of Delegates was perceptibly smoother than in the past, and without angry confrontation. I would like to think that all of the attendees were cognizant of the last few paragraphs of my October editorial. However, it's more likely that the temporary demise of national health system reform gave us all a much-needed respite, which helped the delegates to be more cohesive as a medical society and more ready to deal with the future. This is to be lauded, for only as a unit will we be able to progress successfully through the maze leading to the twenty-first century.

I do want to congratulate our speaker and vice speaker on a notable and difficult job expertly handled.

A highlight for me as an ob/gyn was the presentation of our Distinguished Service Award to Robert W. Ford, MD, of Allison Park. I think Bob typifies the meaning of a "real doctor"—serving others. That's really what we all do, but in Bob's case he does it in a missionary sense. Without taking away any laureates of previous recipients of the award—they have all been outstanding in their endeavors—I believe this is the first time that our award winner has been recognized for health care ministry to a Third World nation.

A different sort of award winner seemed fitting, in this different sort of annual meeting. There is no comparison between this smooth, well-ordered meeting and the political campaigns of the recent past. Whether or not to stay unified with the AMA was our biggest debate, and while there were strong positions on both sides of the issue, the debate was orderly, albeit passionate at times, and even eloquent.

The House's action to study the issue for another year may be called by some a "cop-out," but it is also a democratic process, which we know takes time. Some will argue that we have little time—I guess I'm in that group. The hemorrhage of membership from the Pennsylvania Medical Society *is* a serious issue with which your board and Council on Membership struggle daily, and while progress has been made, mandatory membership in the triune is an impediment.

Many felt that breaking our mandatory tie with the AMA was tantamount to rejecting the AMA outright as the profession's national "spokes unit," while others worried that the message we would send to Pennsylvanians in general would show lack of unity in our cause. Unfortunately, such perceptions have little to do with the actual mandatory membership rule. It might make a lot more sense for the AMA to consider unity to be 50 percent or more members from within any state. After all, plurality is not an unusual way to consider this.

Overall, our delegates dealt squarely with the issues—something that contrasts sharply with the election campaigns going on outside our hall. I think it's fair to say that voters have been turned off to politicians in general by the very stuff that the campaigns have fostered—mistruths. Witness our president stumping the country, ballyhooing statistics that are not and could not be results of his presidency in office less than two years. The national issues, like the ones before our delegates, are serious ones which should be given thoughtful public debate.

Now we've had another flip-flop, but of considerably more depth—control of the House and Senate by the GOP. Senator Robert Dole (R-KS) is a master at his profession, and I have utmost confidence that he will do a credible job as majority leader of the Senate. But I do worry about Representative Newt Gingrich (R-GA) as speaker of the House, for while he is a skilled politician and a compelling speaker, I would characterize him as a loose cannon. He needs humility and moderation.

On reflection, it may be that these politicians, who often judge our profession harshly as self-involved, reactionary, and out-of-touch, could take some lessons in humility, moderation, purposefulness, and solidarity from the recent proceedings of our Pennsylvania meeting.

We'll help you put something unusually strong in your prescriptions.

Complete confidence.

Confidence. Your patients have it in you, but do you have it in the prescription drug information you currently receive?

The Pennsylvania Medical Society recognizes that you need an unbiased, credible source of drug information. That's why we developed the Center for Professional Drug Education and Information. Established for physicians based on recommendations by physicians, the Center offers you a resource on prescription drugs you can trust.

Why Do 60,000 Doctors Trust Us With Their Professional Reputations?

In an era of "not if, but when" a doctor will be accused of malpractice, your choice of professional liability coverage is extremely important. We know that *any* allegation can be devastating to both your professional reputation and your personal assets... making the company you choose critical to your future well-being. Many factors should be taken into account when making a decision.

Consider our financial strength and stability. We are rated A+ (Superior) by A.M. Best and AA (Excellent) by Standard & Poor's. No other company with an exclusive focus on the needs of the health care community has higher financial ratings.

Look at our experience. For nearly a century we have specialized in defending and protecting doctors. No other company has **successfully defended** more than 180,000 malpractice claims.

Local service is important, too. Our General Agents and Field Claim Managers work with you on every allegation. They average more than 15 years experience working with doctors and the legal system.

Why do more than 60,000 doctors trust their professional reputation and personal assets with us? No other company combines nearly a century of experience with financial strength and the local service provided by The Medical Protective Company.

Taking the Long Road Back to Unity

John H. Hobart, MD

It seems I've started something of a trend—if you can call two columns a trend—by writing to you about things in my future and your past. I started off in October by noting the upcoming vote on unification in the House of Delegates, and as you know by now, the vote was made to remain unified with the American Medical Association.

This month, one of the concerns uppermost on my mind has to do with a meeting that will be past in time as you read this, but still very much part of the future of medicine in the commonwealth of Pennsylvania. I'm talking about the Specialty Society Leadership Summit on November 10 at Society headquarters. It was designed as a roundtable discussion, conducted by an independent facilitator, to determine how all segments of organized medicine can work together to achieve goals on behalf of all.

We wanted to explore the divisiveness within our profession and find out what drives wedges between us. And we wanted to identify some starting points for building new connections and learning perhaps better ways of speaking with a unified voice.

Quite candidly, I'm not quite sure how we got where we are today. Somewhere along the line, medical specialty societies seem to have become the perceived recruiting adversaries of state and county medical societies, hospital medical staff organizations, and the AMA.

Fragmentation comes from our failure to see where we are more alike than different. Sometimes I think this pulling apart of our profession far outshadows the challenges we face from outside.

While no one would deny that physicians of the same discipline of medicine have many clinical and practice problems in common, I would submit that the problems and frustrations of dealing with Medicare, Medicaid, the state Health and Welfare Departments, as well as "the Blues," are likewise matters that ought to draw all Pennsylvania physicians together.

> *"It is far more important that we demonstrate philosophical and political unity as we deal with the external forces that beset us."*

I've seen many changes in my time, but I believe it has never been more certain that only the Pennsylvania Medical Society and the AMA can effectively represent our profession at the state and national levels—and then only if given a true mandate by the majority of physicians. We must continually strive to become a more cohesive and effective force.

From time to time in recent years, various professional organizations of physicians have surprised their colleagues with sudden and unexpected announcements of policies on legislative matters, with no prior notification or discussion.

We must seek unity not in name only, but in deed, as well. Regardless of the unity we enjoy within our own organizations, it is far more important that we demonstrate philosophical and political unity as we deal with the external forces that beset us.

We are never content with divisiveness. We are always working to build bridges back to each other. We know in our hearts, I believe, that it is in all our best interests in the long run to stand together as a unified profession.

LETTERS TO THE EDITOR

AND THE BAD NEWS IS...

...Health care reform is not dead. Hillary Clinton blames bad politics for the failure of a health care reform bill to make it to a vote before the recess. The latest announcement from the administration is that it will be back in 1995, but with the political error corrected: Mrs. Clinton and Ira Magaziner will remain in the background like puppeteers, pulling the strings—but you won't see them.

Mrs. Clinton added that people in this country had been trying for decades to get government-run, universally mandated health care through the Congress.

In her mania for power, Clinton does not recognize that since Wilbur Cohen first tried to socialize the entire provision of medical care in America in the mid-1930s, hundreds of millions of Americans have repeatedly fought to stave off the efforts of a few dozen members of the Congress, a few presidents, and various other "liberals," both within and outside of the political structure, who actively seek a politically dominated, government controlled, semi-European style of socialized medicine. Who in his right mind wants it? One more time we Americans have managed to convince a majority of members of the 103rd Congress that we did not even trust a vote on the matter lest something get slipped off on us as has so often happened before.

With health care reform going underground, the need for citizen vigilance is greater than ever. Just as three-fourths of Medicare/Medicaid legislation has been slipped through as riders on other bills, we can expect to find next year's health care reform bills tacked piecemeal onto bills such as those concerning public lands, banking, wetlands conservation, etc.

We're going to get it, folks; we're just not going to see it coming unless we go after the 104th Congress right away.

George C. Manning, MD
Fort Wayne, IN

QUALITY, FREEDOM: ARE WE SELLING OUR SOULS?

The article by Dr. Paul Kettl, "Separate, But Unequal" [October 1994, page 52], describing the failure to cover psychiatric patients adequately by insurance plans, was excellent indeed. One other point is that psychiatry is somewhat like surgery in that patients do not really like to see psychiatrists for various reasons, two of which are: Reactions to medications can be unpleasant, and there is still a stigma that is less but still exists. This reduces the utilization, often to the patient's disadvantage, so it is too bad to add the other determent, the lack of insurance coverage.

Regarding health insurance reform, do we fully realize that physicians (and patients) are going to be held captive by HMO-type schemes? For example, a doctor may develop special skills in a certain area or get along better with certain patients, but he or she will be unable to accept such patients who could benefit from his or her skills unless they belong to the insurance scheme to which he or she belongs. This will reduce the incentive to develop these skills further, and they will not be put to their maximum use.

In addition, patients will be unable to utilize the doctor's skills, so the patient is also a captive. All this reduces competition for quality, but reformers claimed they were increasing competition—or were they just referring to price?

This country was formed for the purpose of freedom from such captivity, but here we are reverting to that state. Are we, patients and doctors, selling our souls for a mess of potage?

Arthur C. Walsh, MD
Pittsburgh

SOME HABITS ARE DIRTY AND DANGEROUS

It seems part of our culture to lick our finger to turn pages of a book. I have seen Peter Jennings, the ABC anchorman, do it on the evening news; President Bush do it on national television while addressing the country; and countless doctors do it in the hospital while going through patients' charts. In the setting outside the hospital, this habit may be considered by many as unaesthetic at best, but inside a hospital it may be dangerous.

It is well known to the medical profession that the most dangerous bacteria in the human body reside in the mouth cavity. To wet one's fingers with the tongue while going through patients' charts or x-rays and then examine the patient is contradictory to all infectious disease prevention practices. I have seldom seen these health professionals wash their hands after going through the charts. The hospital abounds with dangerous microbes such as staphylococci, hepatitis B virus, and HIV. The practice of licking one's fingers, besides carrying saliva onto the patient charts, etc., may also carry these microbes into one's mouth.

I grant that I may sound unsympathetic to the people who have this habit, and some are going to get angry at me. Believe me, though, that my hands are more dry than an average person, and it does not take too much effort for me to turn the pages of a book or chart. *I am hoping that the editorial staff of this journal does not have this habit themselves because if they do, this letter may never see itself in print.*

My intention is not to offend anyone, but to appeal to them to think about the practice, and abandon it. In these days of Occupational Safety and Health Administration regulations requiring disposable bags for all biohazard material (anything with body fluids, including saliva), gloves, gowns, eye goggles, etc., the time has come for the demise of finger licking to turn pages. Finger licking while eating chicken may be good, but not while turning the pages of patient charts.

Incidentally, the habit of holding the cap of one's pen in the mouth while writing in the chart should be equally condemned.

Narayan Deshmukh, MD
Sayre

BOTTOM LINE IS: WHO PAYS THE DUES?

I would like to add an addendum to Dr. Murcek's well-written article ["The List Is Long Indeed," September 1994, page 8] supporting the federation of medicine.

The next time a legislator or lay person asserts "that the AMA doesn't represent the majority of physicians in America," I hope the listener will disagree. The AMA represents all physicians. Unfortunately, only 42 percent choose to pay the dues.

Charles Cutler, MD
Norristown

Complexity of '90s Medicine Evident at Annual Meeting

Maria T. Montesano
Assistant Managing Editor

Extensive debate at the Pennsylvania Medical Society's annual business meeting, held in Hershey in October, reflected the complexity of the issues facing physicians in both the state and the nation: The role of managed care currently and in the future of medicine remains uncertain; added concerns over public health are more evident than ever; and while unification with the American Medical Association remains intact for 1995, membership issues require continued attention in the year to come. Engaged in the debate were 270 delegates of the Society's House of Delegates; their decisions on your behalf will guide the organization's 1995 efforts.

Prior to voting on issues in the House, delegates attend reference committee hearings where advocates and opponents debate their views on the various reports and resolutions. Business items then move to the floor of the House for further discussion and vote. This year the delegates adopted 70 reports and resolutions; the remainder were either referred for further study, not adopted, or filed.

Managed care garners debate

Those following state and national newspaper headlines in 1994 recognize that keeping up with almost daily health care mergers has proven challenging (for the latest news, see page 47). In an effort to take the lead in the changing health care environment, physicians are studying their options and professional relationships.

Two resolutions submitted to the House addressed such matters. Resolution 529 (94), introduced by members of the Bucks County Medical Society, called for the Society to endorse the establishment of a statewide "physician-owned health care delivery organization, such as an HMO"; Resolution 531 (94) from the Society's Young Physician Section (YPS) asked for a feasibility study of developing such an organization.

Donald H. Smith, MD, Easton, debuted as vice speaker of the House of Delegates at the Society's annual meeting in October in Hershey. He was elected to the position by the 1993 House.

Debate at the reference committee focused on, "What exactly would the Society be supporting?" Some physicians advocated specifically supporting the Pennsylvania Physician Healthcare Plan (PPHP), a Wyndmoor-based physician group studying the feasibility of forming a statewide physician-owned and physician-directed health insurance company. A majority of delegates, however, spoke in support of "the concept" of such an organization, so not to limit their options for future development.

YPS representatives also spoke in favor of the concept, saying that the issue is important to the future of young physicians, and requested support of Resolution 531 to *further* study the issue.

On the floor of the House, the delegates followed the reference committee's recommendation to adopt a substitute resolution in lieu of the two original resolutions. The substitute resolution directs the Society to "endorse the concept of physicians pursuing the establishment of Pennsylvania physician-owned health care delivery organizations."

The vote is consistent with the work of the Society's new subsidiary, the PennMed Member Services Company (PMSCO), which is currently assisting physicians with a variety of practice issues, from general practice management services to practice mergers, to establishing and managing physician-led multispecialty networks. Both efforts share the goal of seeking to put physicians in a strong position in the health care marketplace.

In response to YPS concerns, the State Society—primarily through PMSCO—will continue to monitor efforts and assist physicians who are working to establish physician-owned and physician-directed health care delivery organizations.

Any willing provider is hot issue

Recognizing that exclusion of providers from managed care contracts is a major issue—and a controversial one—among Pennsylvania physicians, the House adopted a board report which advocates a "middle ground" on the "any willing provider" issue.

Policy of the 1993 House of Delegates required the Society to include in its health system reform position "the concept that any willing health care provider/supplier be permitted to participate in health care networks/alliances, provided they meet basic quality assurance criteria." However, others strongly believe networks should have

Society Dues Unchanged in '95

The House of Delegates voted not to increase State Society dues in 1995, making it the fifth year in a row dues are set at $430 for the full-dues membership category. Dues remain unchanged for other categories of membership as well. As in the past, $10 of the assessment will be given to the Society's Educational and Scientific Trust.

unfettered discretion regarding who is admitted to a network.

The board, in its report to the House, said it believes that the interests of the *core* of the Society's membership and their patients will be best served by a solution that recognizes the legitimate concerns of *both* sides.

The board report included five recommendations, which were adopted by the House:

"a) The Society endorses AMA policies advocating criteria primarily based on professional competence and quality of care, due process, and physician input from a network 'medical staff' regarding both the criteria and the process;

b) Managed care networks should not be permitted to require physicians to have hospital admitting privileges in those areas of the state where it is impractical for the physician to maintain such privileges or where such a requirement could aggravate a physician shortage;

c) Managed care networks should be required to waive board-certification requirements in those areas of the state where such a requirement could aggravate a physician shortage;

d) The Society should seek legislatively mandated safeguards, including the protections called for in the above policies, to protect providers from arbitrary exclusion from managed care networks; and

e) The Society reiterates its position that individuals must be free to choose from a full range of health care coverage plans and should not be forced into a plan that limits their choice of provider or misled into selecting such a plan."

In related action, the House adopted without debate Resolution 518 (94), calling for a study of the following "any willing facility" policy: "That any willing credentialed facility be given the opportunity to apply to any health plan or network and have that application approved if it conforms with the fee schedule and quality mechanisms set forth by the plan."

Public health focus: violence, smoking

Public health issues remain a priority for Pennsylvania physicians. The House resolved this year to act on two important issues affecting patients and physicians—tobacco use and violence against physicians.

At left: Ronald J. Clearfield, MD, New Kensington, chaired the Reference Committee on Bylaws, which dealt with the issue of unification and other proposed bylaws changes. Above: Board Chair John W. Lawrence, MD, was one of a large contingent in support of deunification from the AMA.

In response to a Philadelphia County Medical Society resolution, the House has directed the Society to encourage local governments to enact anti-tobacco ordinances. Further, the Society will oppose any legislation that would preclude "sting" operations to enforce age limits on tobacco sales. Instead, the Society will solicit support from parent-teacher organizations in its efforts to make schools tobacco free.

Engaged in debate at the Society's annual meeting were 270 delegates of the Society's House. Their decisions on your behalf will guide the organization's efforts in 1995.

These actions are a continuation of Society efforts to curb tobacco use and reflect the AMA's goal of a "smoke-free society by the year 2000." In the past, the Society has supported anti-tobacco legislation and has frequently testified before legislative committees on tobacco concerns.

In other efforts, the Society is a partner in the state Department of Health's Youth Against Tobacco campaign, which encourages teenagers not to use tobacco products. Also, the Society leads a program which recognizes pharmacies which promise not to sell tobacco products (see pages 51-53) and is a member of the Coalition for a Tobacco-Free Pennsylvania.

Regarding violence against physicians—a growing concern among physicians, especially in light of the summer killing of a physician in front of a Florida clinic—the delegates discussed the need for unbiased, complete information about the problem. They voted to have the AMA collect and publish data on incidence of threats and/or violence against physicians so to better "understand the magnitude of this problem and be better able to protect the well-being, safety, and possibly the lives of ourselves and our colleagues."

State Society stays unified

One of the most hotly debated issues of the annual meeting was whether the State Society should remain unified with the AMA.

Resolution 101 (94) called for the Society to "make the necessary bylaws change that will allow the membership the freedom of choice as to whether or not they desire to be a member of the AMA, Pennsylvania Medical Society, and/or the county medical society." The Delaware County Medical Society proposed a similar change to break the tie with the national organization.

Lengthy debate at the Reference Committee on Bylaws focused on several issues. Some physicians testified against unification, citing philosophical differences in opinion with AMA policies; others cited declining membership and the cost of joining all three organizations as reasons to allow freedom of choice.

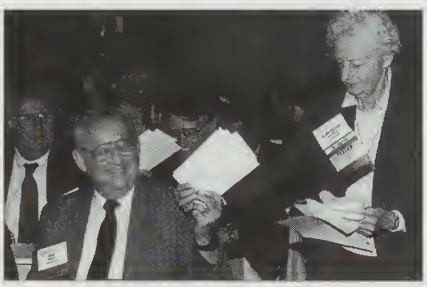
But advocates of unification argued it was "critical" to maintain the national tie, to work with physicians nationwide for the "good of the

Dr. Seward

profession." Others questioned the validity of blaming unification for the decline in state membership. In the end, the House voted not to deunify.

The delegates also approved a recommendation of the reference committee that the board establish a committee to study the issue of deunification and include results of an AMA consortium studying the structure of the federation.

Immediately following the vote, P. John Seward, MD, chair of the AMA's Board of Trustees, responded to the House action: "I am often asked by physicians, 'If we deunify, would the AMA abandon us?' My answer," he said, "is that the AMA never abandons any American doctor, member or nonmember." He added that he appreciated the confidence in the AMA demonstrated by the vote and that he would take members' concerns back to AMA leadership, "because these are concerns for all of medicine."



Delegate Robert Kemp, MD (left), Lancaster County, passes paper ballots to Volunteer Teller Gertrude Blumenschein, MD (right), Fayette County, during a close House vote.

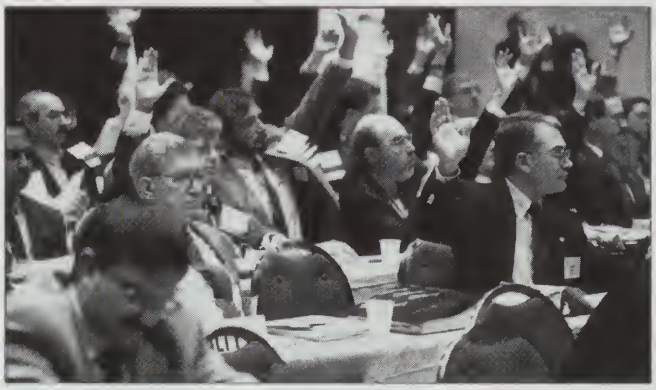
Membership-driven process

To enhance the Society's vitality as it moves into the twenty-first century, the House approved recommendations generated by activities of the Society's Task Force to Enhance Physician Involvement. This task force was established two years ago to study physicians' decreasing involvement in organized medicine, the relevancy of Society membership to physicians, and the need for increased focus by the Society to involve more physicians at the grassroots level.

After extensive research, including focus groups of members, nonmembers, and ex-members, the task force said key findings suggested that the Society is perceived as:

- reactive, rather than proactive;
- inadequately soliciting and incorporating input from the grassroots;
- under-representing physician diversity in leadership positions; and
- failing to breakdown communication barriers between the Society and the ever-increasing number of employed and group practice physicians.

The task force also found that physicians in groups do not perceive the value in membership and that salaried physicians have less flexibility in finding time for Society meetings.



Delegates raise their hands in support of one of 70 reports and resolutions adopted at this year's annual session.

Following further examination of the findings and related information, the task force pin-pointed two root causes for the Society's lack of physician involvement:

1) The Society does not truly understand what members value and consider to be a good return on the investment for the typical Society member.

2) The Society, in its attempt to be all things to all members, is perceived as being unfocused and unable to deliver in meaningful ways.

Further study of the Society's methods of prioritizing, communications, allocation of resources, and organizational discipline showed that the Society has largely functioned as a *member*-driven organization—attempting to be all things to all members, always saying yes, and avoiding conflict—instead of a *membership*-driven organization—practicing prioritization, encouraging bottom-up communications, soliciting constant feedback, responding willingly to change, exercising flexibility, and emphasizing accountability.

The task force concluded that a key to the Society's success may rest in the organization's ability to become *membership*-driven—to become an organization that physicians *want* to join because they perceive value in the Society and its initiatives. To achieve this, the Society will undertake four major initiatives:

1) prioritize initiatives based on identified membership needs;

2) expand two-way membership communications, emphasizing grassroots input;

3) allocate staff and fiscal resources to support membership priorities; and

4) streamline infrastructure to respond quickly to changing membership priorities.

An essential and crucial element the Society will use to help prioritize and achieve a membership-driven organization is the "membership-driven process (MDP)." The process will result in obtaining grassroots input, analyzing information, establishing priorities, acting on established priorities, and providing feedback to the membership.

As directed by the House's approval, these initiatives will begin in 1995 and are anticipated to result in a long-term, positive impact for the membership. A nuts-and-bolts introduction to the process is slated for publication in the January issue of PENNSYLVANIA MEDICINE.

In other membership-related action, the House approved a new membership category for practice administrators.

Stacy M. Wenger, the Society's assistant director of medical staff relations, contributed to this article.

RESIDENTS ATTEND NCRPO; SECTIONS DISCUSS POLICY

In October, the Society's Resident Physician Section (RPS) participated in the fourth National Consortium of Resident Physician Organizations

(NCRPO). Attending were resident physician chairs and other representatives of state and specialty societies.

Sponsored by the Bureau of Health Professions, the NCRPO has a mission to increase dialogue among resident physician organizations so that members of these groups can share educational, leadership, and socioeconomic experiences, and to encourage the development of resident physician organizations. The fifth meeting of the NCRPO will be held in Washington, DC, in the fall of 1995.

Elections for the RPS Governing Council took place at the section's annual meeting, held in conjunction with the annual business meeting in Hershey in October. Newly elected officers are: Stuart Gitlow, MD, MPH, chair; Eric Gertner, MD, vice chair; and Elizabeth Sinz, MD, secretary. Joyann Kroser, MD, is serving her second year as resident trustee, and Jennifer E. Trottman, MD, is past chair.

Also serving the section are: Jerome A. Schroeder, MD, Ajay Goyal, MD, Jill B. Cohen, DO, Patricia A. Graham, MD, E. Mark Hekler, MD, and Steven C. Thornquist, MD, members-at-large; and Bradley D. Stein, MD, Sunil K. Saini, MD, Binoy K. Singh, MD, Brian A. McConnell, MD, Atulkumar M. Kshatri, MD, and Jeffrey S. Plotkin, MD, alternate delegates.

Residents interested in becoming more active in the section may contact any member of the Governing Council for more information. Those with Internet access can contact Dr. Gitlow directly at afagitlow@aol.com.

Young Physician Section

The Society's Young Physician Section (YPS) also met during the Society's annual meeting. Thirty young physicians attended the Eighth Assembly of the YPS on October 20.

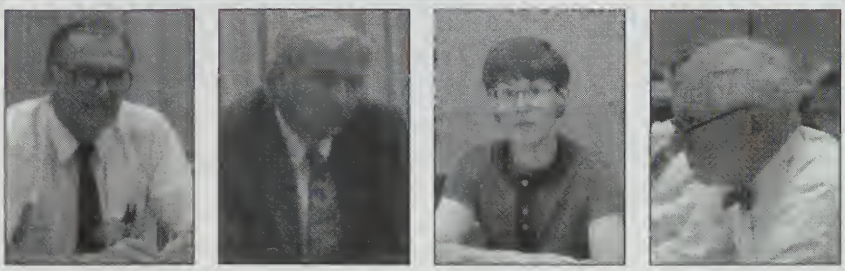
The section reviewed annual business meeting materials and agreed to support the right of State Society members to freely choose whether of not to join the AMA. It also approved a resolution on statewide physician-owned/managed PPOs, which moved to the House as Resolution 531 and was incorporated into Substitute Resolution 529. A second resolution from the section dealing with restrictive covenants in medicine was referred for study by the full House.

David Shulkin, MD, Philadelphia, led an afternoon educational session on "Improving Cost-Effective Clinical Decision Making." The seminar was developed to give participants the skills to address these issues in their practices; Dr. Shulkin designed case studies for attendees to review and discuss.

Elected officers of the YPS Governing Council are: William J. West Jr. MD, chair; Mark A. Piasio, MD, vice chair; and Mary J. Hudak, MD, secretary. Robert M. McNamara, MD, was newly elected trustee representative, and Arthur V. Stein, MD, is past chair.

Also serving the section are: Jeffrey H. Baker, MD, Chris W. Fellin, MD, Marlon T. Maus, MD, and Martin D. Trichtinger, MD, delegates; Daniel J. Glunk, MD, member-at-large; and Stuart Gitlow, MD, Joseph K. Izes, MD, Andrew R. Levette, MD, and Carl A. Sirio, MD, alternate delegates.

HMSS NEWS



Sixty-one representatives attended the Hospital Medical Staff Section (HMSS) meeting on October 20 to discuss such issues as the appropriate roles of nursing administration and the medical staff in hospital quality assurance activities, the role of the medical staff in hospital CQI/TQM activities, and certificate of need for the development of ambulatory surgical facilities. The assembly considered six resolutions; five were adopted by the section, four were adopted by the House. The meeting concluded with a four-hour seminar, "How to Build Effective Coalitions and Negotiating to Succeed." Elected officers and members of the HMSS Governing Council are (left to right): James G. Pitcavage, MD, chair; John W. Lehman, vice-chair; Wilma C. Light, MD, secretary; and William W. Lander, MD, member-at-large.

Medical Student Section

Forty medical students attended the Medical Student Section assembly, also held on October 20. Highlighting the agenda was the educational program, "Preparing Yourself for the Future of Medicine."

Paul Rudolf, MD, chair-elect of the AMA's Governing Council, spoke to students about keeping up to date on the changing medical marketplace and new happenings in medicine. According to Dr. Rudolf, this will help students better choose types of practice.

Elected officers of the MSS Governing Council are: Kenneth W. Anderson, chair and Stephen W. McManus, vice chair. Stacy L. Krisher is serving her second year as student trustee, and Randolph B. Wood is past chair.

Also serving the section are: Kimberly W. Schlesinger, alternate delegate; and Heather L. Orman, Kasai S. Sudol, James R. Baer, Tina J. Allen, Andrew F. Vaughn, and Heidi Handel, members-at-large.

Stuart Gitlow, MD, chair of the Society's Resident Physician Section, contributed the RPS portion of this article.

ANNUAL MEETING STATS

The following county medical societies reported 100 percent attendance at the Society's annual meeting: Adams, Beaver, Berks, Bucks, Centre, Chester, Clearfield, Clinton, Columbia, Crawford, Cumberland, Dauphin, Delaware, Erie, Indiana, Lawrence, Lehigh, Luzerne, Lycoming, Mercer, Monroe, Montour, Northampton, Northumberland, Schuylkill, Tioga, Venango, Westmoreland, and York.

ACTIONS OF THE BOARD OF TRUSTEES

LEGISLATION, MANAGED CARE TOP LIST OF '95 GOALS

The Board of Trustees at its October 21 meeting approved the following Society priorities for 1995:

- Legislation focusing on health system reform, medical liability reforms, managed care safeguards,

Westmoreland County Delegates Donald C. Brown, MD (left), and John S. Parker, MD (right), discuss House proceedings; both serve the Pennsylvania Delegation to the AMA—Dr. Brown as vice chair and Dr. Parker as a member of the delegation.

utilization review standards, and allied health scope of practice.

- Managed care: Continued support for the development and expansion of PMSCO services; empowerment of Pennsylvania physicians through education on the changing health care marketplace and strategic medical practice decision making; and expand the role of organized medical staff section to managed care entities.
- Membership: Recruitment and retention of all physicians.
- Expansion of non-dues revenue.
- Public health issues.
- Third-party reimbursement issues.

Priorities are determined each year as guidance for the Pennsylvania Medical Society's overall activities, but by no means limit the range of issues addressed by the Society. The House of Delegates passed a resolution calling for future priorities to be submitted to it as a separate and free-standing item of business.

Other action

In other action at the meeting, the board discussed the Society's pilot membership programs for group practices and approved in principle a series of recommendations from the Young Physician Section (YPS).

The Council on Membership has developed several pilot membership programs over the past year to recruit new members. Its latest program is an attempt to meet the growing involvement of physicians in group practices.

As a starting point, the board reaffirmed the AMA's definition of group practice as "...three or more physicians who are formally organized as a legal entity in which business and clinical facilities, records, and personnel are shared. Income [is] distributed by some prearranged plan." The board also agreed that independent practice associations (IPAs), "clinics without walls," and other similar group structures should also be part of the group practice pilot membership program.

In response to the Society's new "membership-driven process" (see overview, page 14), the YPS developed a series of recommendations asking the Society to:

- consider membership of young physicians as a priority;
- assure adequate representation of young physicians in the membership-driven process;
- solicit grassroots input from young physicians throughout the state in order to assist the Society in becoming more effective for its members and future members;
- direct, as appropriate, existing resources to increase and find new ways to communicate with young physicians across the state; and
- support and provide resources for YPS leadership initiatives for the young physicians in Pennsylvania.

The board approved in principle the recommendations.

Reorganization

At a reorganizational meeting following the last session of the 1994 House of Delegates on October 23, the board re-elected John W. Lawrence, MD, chair, and Ferdinand L. Soisson Jr., MD, secretary. Dr. Lawrence, Second District, returns as chair for his third term; Dr. Soisson, Eleventh District, returns as secretary for his sixth term. Also, James R. Regan, MD, Interspecialty Section, was newly elected vice chair of the board.

Election Results

The State Society House of Delegates elected the following new officers and delegates during its October 1994 meeting:

President: John H. Hobart, MD, Northampton County

President Elect: Jonathan E. Rhoads Jr., MD, York County

Vice President: Victor F. Greco, MD, Luzerne County

Speaker of the House: Howard A. Richter, MD, Delaware County

Vice Speaker of the House: Donald H. Smith, MD, Northampton County

New Trustees:
John A. Malcolm Jr., MD, Seventh District
Edward A. Lottick, MD, Twelfth District
Robert M. McNamara, MD, Young Physician Section

Delegates to the AMA/County:
R. William Alexander, MD, Berks
Richard D. Baltz, MD, Dauphin
Doris G. Bartuska, MD, Philadelphia
Joseph B. Blood Jr., MD, Bradford
Betty L. Cottle, MD, Blair
James B. Donaldson, MD, Philadelphia
Victor F. Greco, MD, Luzerne
Lee H. McCormick, MD, Allegheny
John S. Parker, MD, Westmoreland
Howard A. Richter, MD, Delaware
Carl A. Sirio, MD, Allegheny
Donald H. Smith, MD, Northampton

Alternate Delegates to the AMA:
George F. Buerger Jr., MD, Allegheny
Charles J. Cattano, MD, Allegheny
Robert G. Doe, MD, Lancaster
Carl A. Frankel, MD, Dauphin
Thomas F. Freenock Jr., MD, Delaware
Mark S. Friedlander, MD, Delaware
Andrew W. Gurman, MD, Blair
Virginia E. Hall, MD, Dauphin
Lila S. Kroser, MD, Philadelphia
John A. Malcolm Jr., MD, Union
Ferdinand L. Soisson Jr., MD, Cambria

Alternate Delegate, Resident:
Jennifer E. Trottman, MD, Montgomery

Alternate Delegate, Student:
Kimberly W. Schlesinger, Allegheny

Committee to Nominate Delegates and Alternates to the AMA:
Gilbert A. Friday Jr., MD, Allegheny
Donald E. Parlee, MD, Bucks
Gloria J. Watkins, MD, Westmoreland

Judicial Council:
David W. Clare, MD, Allegheny
Raymond C. Grandon, MD, Dauphin

ou're on solid ground with the Dodson Plan.

More than 75 years ago, Bruce Dodson, Sr. pioneered the concept of the dividend plan for workers' compensation insurance. Dodson Group has been helping businesses like yours save on premium costs ever since.

The Dodson Plan gives you the opportunity to earn a dividend each year, depending on the claim experience of all insured members. We carefully select those who participate, creating the greatest potential for you to save.

Pennsylvania Medical Society endorsed the Dodson Plan in 1973. Since then, participating members have earned a total of **$2,309,240** in dividends. Share in the savings!

You're on solid ground with Dodson.

Working Together for Change

John H. Hobart, MD

This is an excerpt from Dr. Hobart's inaugural address presented on October 21 to the Society's House of Delegates at its annual meeting.

It is not easy to comment about some of the very significant and meaningful decisions that this House will be addressing in the next three days. Nevertheless, there are several concerns on all of our minds, and I would like to at least touch upon each one for a moment or two.

Membership

First is the issue of membership...a matter of intense concern, and one that will remain at the center of Society efforts this year.

Our percentage of membership among young physicians is well below what we would hope and expect from that section of our physician population. We are working hard to find new ways to attract more young physicians—and to keep them as active, involved members.

I would like to acknowledge the work of the Task Force to Enhance Physician Involvement and the subsequent refinement of their recommendations at the board retreat in July. Many hours and much effort have been expended in this and other forums to address our membership concerns.

You will hear the details of these efforts in your reference committees, but I can give you the bottom line right now, which is: We are all in this together. Those of us who have benefited from the rewards of our profession are not standing by, leaving our younger colleagues to struggle alone. Our labors may be of the present moment, but our concern is the future of our profession and of our patients.

Tort reform

This leads me to the second concern—the issue of tort reform.

I am not infrequently faced with physician groups that tell me we don't really need to do anything with regard to tort reform this year—or even next year. My response is: Time Out.

Tort reform is not a stagnant subject that is not going to rear its ugly head unless and until it is prodded by physicians. May I remind you of the trial bar and its very powerful lobby, which is always seeking to enhance its position through such efforts as exploring new theories of malpractice law and new forms of coverage. The trial bar is also both vigilant and active in its efforts in the legislative arena. But change may come from other directions as well.

> ***"If physicians do not take a proactive stance on tort reform, we will find ourselves in the position of trying to catch up with the gains of the other side."***

The state CAT Fund is advocating an increase in basic limits because of its fears of the need for an emergency surcharge. This probably would mean a significant increase in primary level premiums. And the money would go largely to fund the legal system.

If physicians do not take a proactive stance on tort reform, we will find ourselves in the position of trying to catch up with the gains of the other side. Indeed, most of our advocacy positions seek only to level the playing field. So tort reform is, and will remain, a key concern of the Pennsylvania Medical Society.

Dr. Hobart, an Easton urologist, is the Society's 145th president.

Support, Cooperation Are Keys to Survival

Martin A. Murcek, MD

This is an excerpt from Dr. Murcek's exaugural address presented on October 21 to the Society's House of Delegates at its annual meeting.

In my inaugural address, I stated that I had no specific personal agenda to pursue during my year as president of the Pennsylvania Medical Society. Instead, I identified several ongoing initiatives of the Society that deserved attention, as well as the unprecedented assault on the medical profession, in the guise of health system reform.

Society "wins"

I am proud to look back on the past year, and count several major successes of the Society's work. The favorable outcomes that were achieved are a strong testament to the quality of the Society's staff, as knowledgeable and determined a group as the physicians of Pennsylvania could hope to have working for them.

The first major success I want to mention is the court battle the Society fought against the state Department of Public Welfare (DPW). In instances where elderly patients qualified for both Medicare and Medicaid, DPW was paying only the lower rates authorized by Medicaid, in contradiction of federal law. The court ruled that DPW must pay both the Medicaid and Medicare deductibles and co-insurance fees. This ruling amounts to $45 million annually for Pennsylvania physicians.

Our second important win came when we successfully stood up to an outrageous demand by Pennsylvania Blue Shield that physicians in this state re-pay $4 million in clinical lab test fees that Blue Shield overpaid during a three-year period. Although the mistake was theirs, Blue Shield and the Health Care Financing Administration contended that physicians should have recognized that they were being overpaid, and should be made to pay the money back with interest. Obscure regulations, buried in thousands of pages of procedural manuals, were cited in support of this bizarre position. In the end, the hearing examiner sided with the AMA-State Society joint appeal of the issue.

The third major win of the year came in July, when the Society persuaded DPW to delay the implementation of a new regulation that requires physicians to get a prior authorization number for certain Medicaid prescriptions. DPW sent out the instructions on how physicians should act to comply with this regulation on the day the regulation was to have gone into effect. The Society got DPW to admit that it wasn't fair to enforce a regulation that nobody knew how to comply with, and a two-week delay in implementation was granted.

In many ways, I believe the fourth big victory we scored this year was the most important in terms of ensuring our patients' health. The Society successfully blocked efforts to introduce legislation that would have substantially relaxed physician oversight of physical therapists, registered nurse practitioners, and other ancillary health care personnel. Under the various proposals being considered, CRNPs would have been allowed to practice medicine as independent primary caregivers. In addition, they would have had unlimited prescription privileges. Our position was, "If they want to prescribe, let them go to medical school, graduate, and meet all other requirements to obtain a medical license."

The common theme of all these efforts is the never-ending encroachment of bureaucratic meddling with the autonomy of physicians. Each of these cases is a microcosm of the great battle of the year, the fight to stave off the Clintons' health reform plan.

Health system reform

When I was sworn in as president of the Society, it seemed a near certainty that a big, socialistic, government-managed health system was just around the corner. One year later, the Clintons' proposal died on the steps of the White House. The plan's

Working Together for Change
Dr. Hobart (continued from page 18)

Unification

The question before us now is not the same as it was five years ago. The question, rather, is this: Is unification *still* in the best interest of the physicians of Pennsylvania? The vote on unification must be on the question of unification *today,* not unification five years ago. Is unification in 1994 a good thing? There are no easy answers.

I hope you have looked long and hard at the membership material...which you have received today. If you have, you know that reasons for the rise and fall of membership are impossible to completely define. And even after changes have occurred, it is not always possible to dissect the causes and determine exactly which were the most critical factors. In fact, the evidence suggests there are many reasons why physicians join or do not join their professional associations. And we continue working to identify and address every factor that would seem to affect our membership statistics.

Certainly, there is risk involved both in the vote to deunify and in the vote to remain unified. Your State Society is prepared for either outcome. But I would note that neither vote supports the status quo. Change is necessary to meet this changing environment.

Regardless of the vote here, your State Society cannot do other than continue to develop new strategies for meeting the challenges which the future surely has in store for our profession. That said, I will put the issue aside, as I have every confidence that the House will vote for what it believes to be the best course for the physicians of Pennsylvania.

Thank you for the opportunity to serve as your president in the coming year. And I would close with one final admonition—please stay in touch.

Support, Cooperation Are Keys...
Dr. Murcek (continued from page 19)

backers identify us as the bad guys who killed this supposed great boon for every man, woman, and child in America. In one sense, I wish we were that powerful. If we were, we could seize control of the reform debate and get something meaningful and fair for all proposed in Congress. What the Clinton plan backers are unable to admit, however, is that the Clinton plan was its own undoing. It was such a bad idea that it collapsed under its own weight—and the scrutiny of the American people.

When it looked like Clinton-Care was going to be railroaded through the House and Senate, I urged all of you to educate your patients about the dangers of the plan, and to mobilize your patients to pressure their representatives and senators in Washington, DC, to reject any part of the Clinton plan that was bad for their access to health care. I know a lot of you took me up on that, because I received plenty of reports in the course of my travels about the concerns being voiced by your patients, and about the calls and letters they directed to Washington.

It is important to keep in mind that the health reform fight will never be over. The people who want the government to control health care financing and delivery in this country will be back again. The lessons they learned in this failed attempt will make them stronger in the future. It is possible that they will attempt to implement their plans one small piece at a time, rather than in one grand sweep. That possibility demonstrates why the four successes I have mentioned are so important. The AMA, the State Society, and all physicians in Pennsylvania and other states must continue to make the promulgation and implementation of onerous regulations as difficult and politically costly as possible. We must stand up to the bureaucrats, and in doing so, wear them down.

"We must stand up to the bureaucrats, and in doing so, wear them down."

While the government, at both the federal and state levels, has been knocked back to square one on health care, I am still concerned about what may be forthcoming from the large insurance companies and hospitals. They would like nothing better than to own us as employees. No matter how much we protest, quality of care suffers with the loss of autonomy, personal and professional freedom, and professionalism, that seem to be inevitable when such employment of physicians occurs.

We have to keep our county, state, and national organizations viable by promoting membership and paying our dues. We also have to make sure we have leadership that is committed to a cooperative effort, as opposed to a bunch of "little kings" obsessed with building up their own little fiefdoms.

In conclusion, this has been one very busy year. Our accomplishments give me a great feeling of pride and of optimism for the future.

Resolutions Before the 1994 House of Delegates

This is an overview of actions from the October 21-23 annual meeting in Hershey.

Bylaws

101 (94): Physician Freedom of Choice. Calls for bylaws changes allowing members freedom of choice regarding membership in American Medical Association, Pennsylvania Medical Society, and county medical societies. *Not adopted.*

102 (94): County Medical Society Membership for Osteopathic Physicians. Would allow osteopathic physicians in good standing with their state and national associations to join county medical societies. *Referred to the board.*

103 (94): Deunification. Calls for a report to the 1995 House addressing the overall issue in light of an upcoming report by the AMA Consortium. *Adopted as amended.*

104 (94): Disciplinary Procedures. Calls for bylaws change requiring district board of censors to receive cases for original jurisdiction when requested to do so by a county board of censors; also recommends Judicial Council policy that county board of censors accumulate key facts of a case and not simply function as a pass-through entity. *Adopted as amended.*

Education and Science

201 (94): State Regulation of Laboratories. Calls for the Society to encourage and work for reform of more stringent regulations to make them consistent with CLIA standards, especially regarding waivered tests in physician offices. *Adopted.*

202 (94): Pharmaceutical Firms' Indigent Patient Programs. Calls for the AMA to seek standard industry-wide applications and guidelines for these programs. *Substitute resolution adopted.*

203 (94): Confidentiality of Electronic Recordkeeping. Calls for a study and report on options for protecting patient data, and possible drafting and support of related legislation. *Substitute resolution adopted.*

204 (94): Transmission of Medical Information. Calls for the Society to work with others to encourage modern means of transmission and to develop safeguards for confidentiality. *Substitute resolution adopted.*

205 (94): Continuing Medical Education. Calls for recognition of AOA- and ACCME-approved CME credits for licensure requirements. *Adopted.*

206 (94): Accreditation of Graduate Medical Education Programs. Seeks policy that it is inappropriate to use the residency review committee to control the number of physicians in any specialty or field of practice. *Referred to the board.*

Facilities/Peer Review

301 (94): User-Friendly Physician Review for Medical Staffs. Calls for copies of all medical staff minutes to be stored in medical staff office and made available to all medical staff physicians, except for redaction to preserve confidentiality or proprietary rights. *Referred to the board.*

302 (94): Physician Review for Medical Staffs. Calls for copies of all medical staff minutes to be available to all medical staff physicians, except for redaction to preserve confidentiality or proprietary rights. *Referred to the board.*

303 (94): Medical Director Clinical Qualifications, Roles, Responsibilities, and Duties. Calls for the Society to adopt AMA policies regarding the role of hospital medical directors, and medical directors of managed care plans. *Adopted as amended.*

304 (94): Medical Staff Self-Governance. Calls for the Society to adopt policy that voting members of a hospital's medical executive committee must, themselves, have been elected by either the medical staff or by a subset thereof. *Adopted.*

305 (94): Medical Staff Model Bylaws—I. Calls for the Society to adopt policy that: 1) physicians under investigation by the hospital medical executive committee be promptly notified and given the opportunity for an interview; and 2) medical staff quality improvement committees arrange for external review, when appropriate, and medical executive committee investigations be focused on the issue which initiated the investigation. *Adopted.*

306 (94): Medical Staff Model Bylaws—II. Calls for the Society to adopt the policy that when a quality improvement committee questions a physician's clinical behavior or actions, it must: 1) raise the specific concern in its initial query and deal with the individual case(s) when addressing the physician's response; and 2) offer the physician the opportunity to appear in person at its next or special meeting if he/she wants to discuss the situation. *Not adopted.*

Legislation/Regulation/ Professional Liability

401 (94): Physician Lobbyist. Calls for employment of physicians in active full- or part-time practice as lobbyists. *Not adopted.*

402 (94): Limiting Medical Records Access. Calls for Society to seek legislation allowing for summaries of medical records in response to inquiries, except when full records are required for litigation. *Substitute resolution adopted.*

→

403 (94): Medical Examiner System. Calls for continued support of legislation to create such a system in Allegheny County, and efforts to resolve differences with those who oppose replacement of the current elected coroner system. *Adopted.*

404 (94): Protecting Raw Material Suppliers from Product Liability Litigation. Calls for support of the Biomaterials Access Assurance Act of 1994, which offers such protection. *Adopted as amended.*

405 (94): Insurance Forms. Calls for recommendation to prohibit insurance companies from requiring use of complex forms without proper compensation for time and skill required. *Substitute resolution adopted.*

406 (94): Patient Charts. Calls for recommendation to ban release of patient charts to insurers. *Substitute resolution adopted.*

407 (94): CAT Fund. Calls for solicitation of $5 from each Pennsylvania physician to help fund a CAT Fund legal action. *Referred to the board for further study.*

408 (94): Restrictive Covenants. Calls for the Society to seek state legislation to regulate the use of restrictive covenants in physician contracts, and report back to the 1995 House. *Amended and referred to the board for further study.*

Medical Economics

501 (94): CPT Evaluation and Management Code Revision. Calls for the Society to communicate through the AMA strong objections to specific difficulties with E/M codes and for the AMA to simplify and streamline coding decision-making processes. *Not adopted.*

502 (94): Physicians Choosing Whether To Bill Medicare Co-Pay. Calls for working with HCFA to remove the co-pay billing requirement and allow physicians to use their own discretion. *Not adopted.*

503 (94): Unified Credentialing. Calls for the Society to work with third-party payers, hospitals, and managed care plans to develop a universally accepted credentialing process. *Referred to the board for further study.*

504 (94): Coverage for Routine Annual Gynecological Exams and Pap Smears. Calls for a resolution to the AMA petitioning HCFA to provide Medicare coverage for these. *Adopted as amended.*

505 (94): Hospital Observation Services to Medical Assistance Recipients. Calls for petitioning of the state Department of Welfare to recognize and reimburse physicians for these services. *Adopted.*

506 (94): Medicare Reimbursement for Phone Calls. Calls for a request to the AMA to petition HCFA for a review of their current reimbursement policy to allow more adequate reimbursement for calls to patients and families. *Reaffirmed.*

507 (94): RBRVS Nursing Home Reimbursement. Calls for a petition to HCFA for an increase of 25 percent above the current reimbursement rate for physician visits to nursing homes. *Adopted as amended.*

508 (94): Independent Review of Third-Party Payers. Calls for regulations or legislation to establish same to review adverse decisions and make binding decisions. *Adopted.*

509 (94): The Third Opinion. Calls for reimbursement if first two differ substantially. *Adopted as amended.*

510 (94): Medical Directors of Managed Care Plans. Requires licensure in the state in which the patient is being treated. *Substitute resolution adopted.*

511 (94): Prolonged Detention While Providing Home Care. Calls for the Society and AMA to seek a CPT category of reimbursement for such services. *Substitute resolution adopted.*

512 (94): Freedom of Choice. Calls for adoption of policy to require employers or health alliances to offer at least two affordable health insurance plans in each generic category (fee-for-service, HMO, PPO, etc.). *Not adopted.*

513 (94): Utilization Review Appeals Under Managed Care. Calls for all physicians and patients to have access to reconsideration/appeals mechanism. *Substitute resolution adopted.*

514 (94): Pennsylvania Blue Shield. Calls for Medicare carriers to bear costs of their own errors and elimination of "hold harmless" clauses from contracts. *Adopted.*

515 (94): Study and Compare Single Payer to Managed Care. Calls for a committee to compare advantages and disadvantages of Medicare and the Canadian system, and report back to the 1995 House. *Not adopted.*

516 (94): Single-Payer System. Calls for support of a national nonprofit system with unrestricted choice and caps on administrators' salaries. *Withdrawn.*

517 (94): Independent Review of Denials by Third-Party Payers. Calls for establishment of a state independent appeal board where physicians, hospitals, and patients may seek binding resolution of these disputes. *Substitute resolution adopted.*

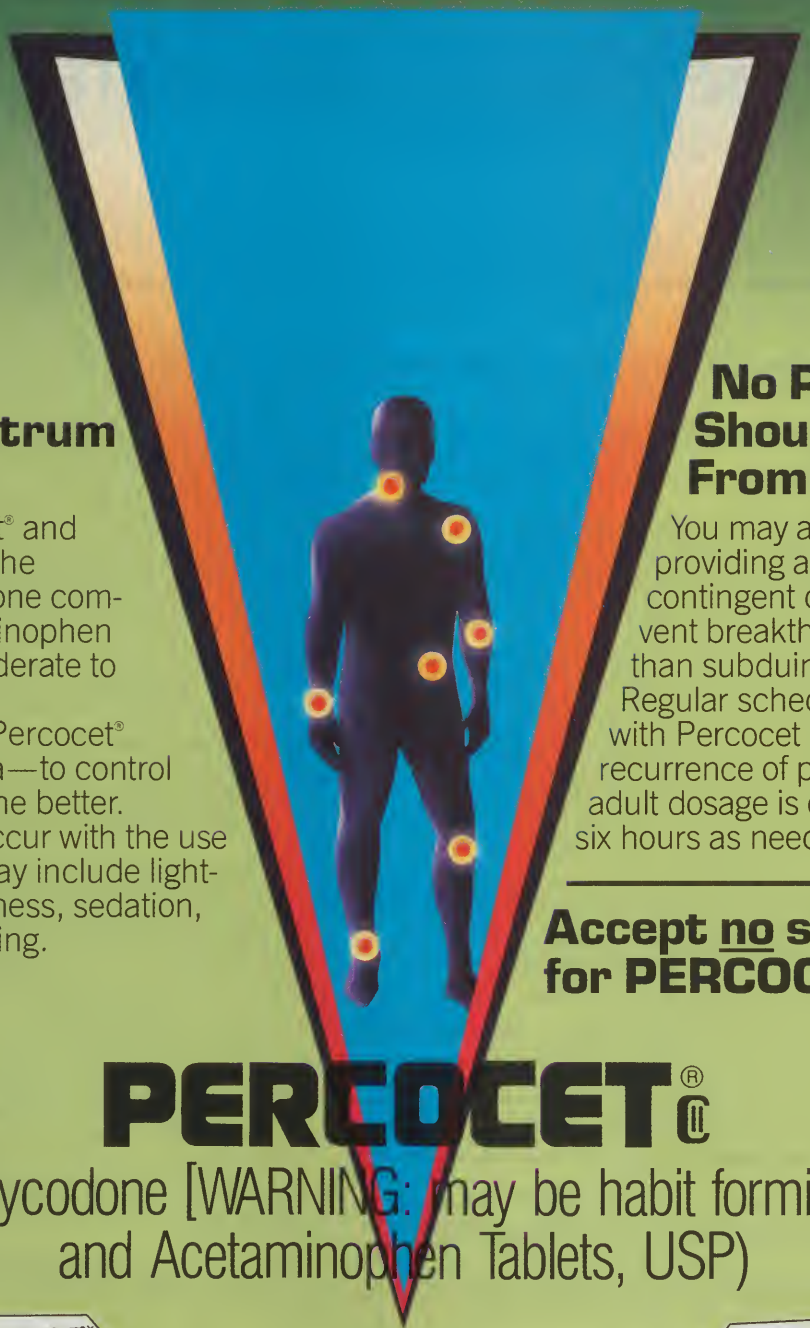
518 (94): Any Willing Facility. Calls for establishment of policy similar to any willing provider. *Adopted.*

519 (94): Reducing Uninsureds by Extending Medicaid. Calls for extending Medicaid eligibility to every Pennsylvanian, and eventually every American, with income below the official poverty level. *Substitute resolution adopted.*

RELY ON PERCOCET® C II TO

(Oxycodone [WARNING: may be habit forming] and Acetaminophen Tablets, USP)

CONTROL PAIN.
THE SOONER THE BETTER



Effective Broad Spectrum Pain Relief

Prescribe Percocet® and give your patients the benefits of oxycodone combined with acetaminophen for the relief of moderate to severe pain.

You can count on Percocet® due to its analgesia—to control pain...the sooner the better.

Side-effects may occur with the use of Percocet and may include lightheadedness, dizziness, sedation, nausea, and vomiting.

No Patient Should Suffer From Pain

You may avoid pain by providing adequate time-contingent dosing to prevent breakthroughs rather than subduing them[1]. Regular schedule dosing with Percocet may prevent a recurrence of pain[1]. The usual adult dosage is one tablet every six hours as needed for pain.

Accept no substitute for PERCOCET®

PERCOCET® C II

(Oxycodone [WARNING: may be habit forming] and Acetaminophen Tablets, USP)

BRIEF SUMMARY

PERCOCET® (Oxycodone (**WARNING:** may be habit forming) and Acetaminophen Tablets, USP)

INDICATIONS AND USAGE PERCOCET is indicated for the relief of moderate to moderately severe pain.

CONTRAINDICATIONS PERCOCET should not be administered to patients who are hypersensitive to oxycodone or acetaminophen.

WARNINGS Drug Dependence: Oxycodone can produce drug dependence of the morphine type and, therefore, has the potential for being abused. Psychic dependence, physical dependence and tolerance may develop upon repeated administration of PERCOCET, and it should be prescribed and administered with the same degree of caution appropriate to the use of other oral narcotic-containing medications. Like other narcotic-containing medications, PERCOCET is subject to the Federal Con-trolled Substances Act (Schedule II).

PRECAUTIONS General: *Head Injury and Increased Intracranial Pressure:* The respiratory depressant effects of narcotics and their capacity to elevate cerebrospinal fluid pressure may be markedly exaggerated in the presence of head injury, other intracranial lesions or a pre-existing increase in intracranial pressure. Furthermore, narcotics produce adverse reactions which may obscure the clinical course of patients with head injuries.

Acute Abdominal Conditions: The administration of PERCOCET or other narcotics may obscure the diagnosis or clinical course in patients with acute abdominal conditions.

Special Risk Patients: PERCOCET should be given with caution to certain patients such as the elderly or debilitated, and those with severe impairment of hepatic or renal function, hypothyroidism, Addison's disease, and prostatic hypertrophy or urethral stricture.

Information for Patients Oxycodone may impair the mental and/or physical abilities required for the performance of potentially hazardous tasks such as driving a car or operating machinery. The patient using PERCOCET should be cautioned accordingly.

Drug Interactions: Patients receiving other narcotic analgesics, general anesthetics, phenothiazines, other tranquilizers, sedative-hypnotics or other CNS depressants (including alcohol) concomitantly with PERCOCET may exhibit an additive CNS depression. When such combined therapy is contemplated, the dose of one or both agents should be reduced.

The use of MAO inhibitors or tricyclic antidepressants with oxycodone preparations may increase the effect of either the antidepressant or oxycodone.

The concurrent use of anticholinergics with narcotics may produce paralytic ileus.

Usage in Pregnancy Pregnancy Category C: Animal reproductive studies have not been conducted with PERCOCET. It is also not known whether PERCOCET can cause fetal harm when administered to a pregnant woman or can affect reproductive capacity. PERCOCET should not be given to a pregnant woman unless in the judgment of the physician, the potential benefits outweigh the possible hazards.

Nonteratogenic Effects: Use of narcotics during pregnancy may produce physical dependence in the neonate.

Labor and Delivery: As with all narcotics, administration of PERCOCET (oxycodone and acetaminophen tablets, USP) to the mother shortly before delivery may result in some degree of respiratory depression in the newborn and the mother, especially if higher doses are used.

Nursing Mothers: It is not known whether PERCOCET is excreted in human milk. Because many drugs are excreted in human milk, caution should be exercised when PERCOCET is administered to a nursing woman.

Pediatric Use: Safety and effectiveness in children have not been established.

ADVERSE REACTIONS The most frequently observed adverse reactions include lightheadedness, dizziness, sedation, nausea and vomiting. These effects seem to be more prominent in ambulatory than in nonambulatory patients, and some of these adverse reactions may be alleviated if the patient lies down.

Other adverse reactions include euphoria, dysphoria, constipation, skin rash and pruritus. At higher doses, oxycodone has most of the disadvantages of morphine including respiratory depression.

DRUG ABUSE AND DEPENDENCE PERCOCET (oxycodone and acetaminophen) Tablets are a Schedule II controlled substance.

Oxycodone can produce drug dependence and has the potential for being abused. (See WARNINGS.)

OVERDOSAGE Acetaminophen Signs and Symptoms: In acute acetaminophen overdosage, dose-dependent, potentially fatal hepatic necrosis is the most serious adverse effect. Renal tubular necrosis, hypoglycemic coma and thrombocytopenia may also occur.

In adults, hepatic toxicity has rarely been reported with acute overdoses of less than 10 grams and fatalities with less than 15 grams. Importantly, young children seem to be more resistant than adults to the hepatotoxic effect of an acetaminophen overdose. Despite this, the measures outlined below should be initiated in any adult or child suspected of having ingested an acetaminophen overdose.

Early symptoms following a potentially hepatotoxic overdose may include: nausea, vomiting, diaphoresis and general malaise. Clinical and laboratory evidence of hepatic toxicity may not be apparent until 48 to 72 hours post-ingestion.

Treatment: The stomach should be emptied promptly by lavage or by induction of emesis with syrup of ipecac. Patient's estimates of the quantity of a drug ingested are notoriously unreliable. Therefore, if an acetaminophen overdose is suspected, a serum acetaminophen assay should be obtained as early as possible, but no sooner than four hours following ingestion. Liver function studies should be obtained initially and repeated at 24-hour intervals.

The antidote, N-acetylcysteine, should be administered as early as possible, preferably within 16 hours of the overdose ingestion for optimal results, but in any case, within 24 hours. Following recovery, there are no residual, structural, or functional hepatic abnormalities.

Oxycodone Signs and Symptoms: Serious overdosage with oxycodone is characterized by respiratory depression (a decrease in respiratory rate and/or tidal volume, Cheyne-Stokes respiration, cyanosis), extreme somnolence progressing to stupor or coma, skeletal muscle flaccidity, cold and clammy skin, and sometimes bradycardia and hypotension. In severe overdosage, apnea, circulatory collapse, cardiac arrest and death may occur.

Treatment: Primary attention should be given to the reestablishment of adequate respiratory exchange through provision of a patent airway and the institution of assisted or controlled ventilation. The narcotic antagonist naloxone hydrochloride (Narcan®) is a specific antidote against respiratory depression which may result from overdosage or unusual sensitivity to narcotics, including oxycodone. Therefore, an appropriate dose of naloxone hydrochloride (usual initial adult dose 0.4 mg to 2 mg) should be administered preferably by the intravenous route, and simultaneously with efforts at respiratory resuscitation (see package insert). Since the duration of action of oxycodone may exceed that of the antagonist, the patient should be kept under continued surveillance and repeated doses of the antagonist should be administered as needed to maintain adequate respiration.

An antagonist should not be administered in the absence of clinically significant respiratory or cardiovascular depression. Oxygen, intravenous fluids, vasopressors and other supportive measures should be employed as indicated.

Gastric emptying may be useful in removing unabsorbed drug.

DOSAGE AND ADMINISTRATION Dosage should be adjusted according to the severity of the pain and the response of the patient. It may occasionally be necessary to exceed the usual dosage recommended below in cases of more severe pain or in those patients who have become tolerant to the analgesic effect of narcotics. PERCOCET (oxycodone and acetaminophen tablets) is given orally. The usual adult dosage is one tablet every 6 hours as needed for pain.

HOW SUPPLIED PERCOCET (5 mg oxycodone hydrochloride and 325 mg acetaminophen tablets, USP), supplied as a white tablet, with one face scored and inscribed PERCOCET, and the other inscribed with DuPont name is available in:

Bottles of 100	NDC 0590-0127-70
Bottles of 500	NDC 0590-0127-85
Hospital Blister Pack of 25 (in units of 100)	NDC 0590-0127-75

Store at controlled room temperature (15°-30°C, 59°-86°F).

DEA Order Form Required.

520 (94): Level Playing Field for Physicians' Services. Calls for the AMA to study factors working against this, and to develop strategies to remedy. *Adopted as amended.*

521 (94): Diversion of Insurance Premiums. Calls for contacting the Insurance Commissioner to review diversion from direct health care to studies, programs, and subcontractors, and for legislative involvement. *Adopted as amended.*

522 (94): Patient Access to Specialty Care in Managed Care Systems. Calls for policy in favor of patients' right to self-refer to a specialist for follow-up care. *Adopted as amended.*

523 (94): Mammograms. Calls for recommendation of reimbursement for annual mammograms for women covered by Medicaid. *Adopted as amended.*

524 (94): Insurance Forms. *Re-referred to the Reference Committee on Legislation, Regulation, and Professional Liability as Resolution 405 (94).*

525 (94): Patient Charts. *Re-referred to the Reference Committee on Legislation, Regulation, and Professional Liability as Resolution 406 (94).*

526 (94): Interference with Patient Care. Calls for a Society study of cases in which insurance companies have interfered with patient care, and release of this study to state insurance commissioner. *Referred to the board for further study.*

529 (94): Physician-Owned HMO/Insurance Company. Calls for Society to endorse a Pennsylvania physician-owned health care delivery system. *Substitute resolution adopted as amended.*

531 (94): Statewide Physician-Owned/Managed PPO. Calls for feasibility study of developing a statewide, physician-owned, physician-directed PPO. *Adopted substitute Resolution 529 (94) in lieu of this resolution.*

532 (94): Automatic Processing of Major Medical Claims. Calls for Society to seek legislation to mandate automatic processing of all Major Medical claims. *Adopted.*

Membership/Reports of Officers

601 (94): Presentation of Society's Priorities as Free-standing Item of Business. Calls for presentation of the Society's proposed priorities to the House each year for approval. *Adopted as amended.*

602 (94): Membership Transfers. Calls for pro-rated transfer of county dues when a physician relocates. *Not adopted.*

603 (94): Prohibiting Medical Organization Discrimination on the Basis of Sexual Orientation. Calls for a resolution to repeal the AMA's recently adopted policy of nondiscrimination, on the grounds that the State Society has never discriminated against homosexuals and lesbians for membership, and that the term "sexual orientation" can linguistically include such behaviors as rape and pedophilia. *Not adopted.*

The nature of the reports and resoultions considered at the State Society's annual business meeting in Hershey in October reflected the complexity of the issues facing physicians practicing in the 1990s. Debated were the future of the profession and how best to prepare for it, how best to focus public health efforts to benefit patients, and what the Society must do to remain viable into the twenty-first century.

604 (94): Antitrust and Discrimination Litigation. Calls for provision of legal and financial support to Society members, and for reimbursement of the Society, with interest, when litigant is successful. *Not adopted.*

605 (94): Annual Reports from Nominees/Appointees to Health-Related Organizations. Calls for reports to the House emphasizing issues of relevance to physicians and patients. *Not adopted.*

606 (94): Fiscal Note. Calls for fiscal note to be developed by resolution author, staff, and those who must implement resolution. *Not adopted.*

607 (94): Conflict of Interest. Calls for adoption of policy requiring physicians who help develop Society policies to disclose such potential conflicts. *Not adopted.*

608 (94): Maximizing Integration of the Policies Adopted by Organized Medicine. Calls for routine comparison of AMA policies with those of its Interspecialty Section. *Not adopted.*

609 (94): Physicians' Health Programs. Calls for reaffirmation of Society's commitment to and support of this program. *Adopted.*

610 (94): Publishing AMA Board of Trustees' Minutes. Calls for availability to all members upon request. *Not adopted.*

611 (94): Removing Conflict of Interest Between PMSCO Consultant and Auditor. Calls for ensuring that the independent accounting firm that audits the PennMed Member Services Company (PMSCO) also does not have a contract with PMSCO for any management consulting service. *Not adopted.*

612 (94): Sleep Medicine. Calls for the AMA to add sleep medicine to its codes for self-designation of practice specialties in the *American Medical Directory.* *Not adopted.*

→

613 (94): Limiting Campaign for AMA Office. Calls for establishment of federation policy to limit campaign-related expense. *Adopted.*

614 (94): Nominations for Society and Subsidiary Positions. Calls for soliciting names from county medical societies through a standard procedure. *Adopted.*

615 (94): Restructuring the Society Board. Calls for two trustees for the First, Second, Fifth, and Thirteenth districts. *Not adopted.*

616 (94): Restructuring the Society House of Delegates. Calls for amending Society bylaws to remove provision that makes secretaries from component societies voting delegates. *Referred to the board.*

617 (94): Amending Bylaws of Society's For-Profit Subsidiaries. Would require directors to be members of the Society, nominated by county medical societies, and in active practice, and would remove age limitations. *Not adopted.*

618 (94): Dues Freeze. Calls for no 1995 dues increase and Society prioritization of activities. *Adopted.*

619 (94): Compensation of For-Profit Subsidiary Board Members. Calls for this information to be reported annually to the House. *Not adopted.*

620 (94): Mailing List Release. Calls for establishment of policy regarding Society's list or subsets of it. *Not adopted.*

621 (94): Group Dues and Representation for All Physicians. Calls for a plan to offer discounts to any identifiable group, representation of these groups at the House, and a report to the House in 1995. *Referred to the board.*

622 (94): Society Committee Composition. Calls for due proportion of representation of county medical societies, with priority given to nominations by county medical society presidents. *Not adopted.*

623 (94): Consortium for the Study of the Federation. Calls for the Society to ask the AMA to reaffirm the policy: "The House of Delegates continue to be the governing body within each entity of organized medicine." *Adopted.*

Public Health

701 (94): Cigarettes Classified as Prescription Drugs. Calls for encouraging the FDA to make this change, and to carry a similar resolution to the AMA. *Not adopted.*

702 (94): Cord Blood HIV Studies. Calls for considering a petition to the state Department of Health disallowing such studies unless identification can be made and treatment instituted. *Referred to the board.*

703 (94): Alternative Medicine. Opposes licensure of practitioners of alternative medicine, and seeks to limit reimbursement to those with currently designated acceptable degrees. *Referred to the board.*

704 (94): Violence Against Physicians. Calls for collection and reporting of threats or incidents. *Adopted as amended.*

705 (94): Tobacco—Local Legislative Process. Seeks enactment of tobacco-related ordinances on the local level. *Substitute resolution adopted.*

706 (94): Tobacco—State Legislative Process. Calls for public hearings, referenda, and lobbying disclosures. *Not adopted.*

707 (94): Tobacco—Youth. Opposes "sting" operations and calls for encouragement of PTAs to help make schools tobacco free. *Substitute resolution adopted as amended.*

708 (94): Ad Hoc Committee to Study Violence. Calls for creation of such. *Not adopted.*

709 (94): Ad Hoc Committee to Study AIDS. Calls for such to consider legislative recommendations. *Not adopted.*

Not Accepted as Business of the House

The following late resolutions were not accepted as business of the House due to their nature, duplication of effort, and/or timing.

207 (94): Continuing Medical Education Standards. Calls for Society involvement in setting, implementation, and endorsement of some state educational standards.

527 (94): Any Willing Provider. Calls for the Society to reaffirm AMA policy on the any willing provider issue.

528 (94): Vertical Divestiture. Calls for the Society to re-refer 1993 resolutions on this issue to the board for further study.

530 (94): Any Willing Provider. Calls for Society to seek legislation to prevent denial of physicians into health care plans without reasonable cause.

624 (94): Mailing List Release. Calls for modification of the Society's existing Data Release Policy.

House Proceedings Available to Members

A bylaws change approved by the House in 1993 calls for the State Society to publish a summary of the House proceedings in the December issue of PENNSYLVANIA MEDICINE, *rather than print the entire official proceedings in the January issue, as done in the past.*

Delegates and county medical societies will receive copies of the full proceedings. Members who would like a copy should contact their county societies or call the State Society at (800) 228-7823 or (717) 558-7750, extension 406.

SUPREME COURT RULING EASES ACT 6 RED TAPE

Health care providers and their patients will benefit from a Pennsylvania Supreme Court ruling regarding adverse utilization review under Act 6 of 1990, automobile insurance reform.

The August 4 ruling allows patients and physicians to file suit immediately after receiving a negative initial PRO (peer review organization) decision—without seeking reconsideration. The ruling invalidates the Insurance Department regulation which allows litigation only after PRO reconsideration. According to the court, the regulation was inconsistent with the legislature's intent.

The case

In the case of *Terminato v. Pennsylvania National Insurance Company,* Ms. Terminato sued the insurance company, which determined that her medical treatment for injuries from an auto accident were "not medically necessary" and her care related to the injuries was "not causally related to the motor vehicle accident."

Her case was dismissed, and the Superior Court upheld the decision, saying that Terminato "did not exhaust the 'administrative' remedy by seeking reconsideration to the PRO that denied the care." However, the Pennsylvania Supreme Court reversed the decision and reinstated the case, citing:

1) that the doctrine of exhaustion of administrative remedies has no application to the peer review procedure under Act 6, since a PRO is not an administrative agency, not a court of record, and not an authorized arbitration tribunal;

2) the absence of neutrality and bias inherent to PROs; and

3) that PRO reconsideration under Act 6 is a permissive remedy, rather than a mandatory and exclusive remedy.

The court concluded that because the regulations do not provide a remedy for the non-payment of medical benefits, and because PRO reconsideration is a cost-containment measure to assist insurance companies and is not an alternative dispute resolution procedure, the remedy is inadequate and does not require exhaustion prior to filing litigation in a court of competent jurisdiction.

Ruling benefits physicians, patients

The Supreme Court decision in this case benefits patients and physicians in two ways. First, auto insurance regulations permit insurers to select the URO for initial review and use the same URO (albeit a different reviewer) for reconsideration. The court's decision benefits patients and physicians by bypassing the reconsideration step. Second, reconsideration proceedings require time and can be quite costly to the physician. The decision, again by bypassing reconsideration, thus saves time and money.

For additional information on this ruling or Act 6 in general, call the Society's Department of Regulatory Affairs and Specialty Legislation at (800) 228-7823 or (717) 558-7750.

Portions of this article are excerpted with permission from Health Law Digest *of the National Health Lawyers Association, vol. 22, no. 10, page 81.*

LEGISLATIVE ELECTION RESULTS MIXED

As the victories of Republicans **Tom Ridge** and **Rick Santorum** came into focus, the rest of the election results from congressional and state legislative seats could most appropriately be described as "mixed" when examined from a partisan view.

The dichotomy lies in the fact that Senate Republicans were able to increase their majority to at least a 29-21 count, while the House remained temporarily under control of the Democrats. The unofficial results show a 102-101 Democratic margin in the House, although reports indicated that another party switch was imminent.

In Congressional races, Republicans have the potential for a net gain of one. They would then take control of the state delegation 11-10. Of course, the strength of the delegation is enhanced by the Santorum victory in the U.S. Senate race and the re-election of Arlen Specter two years ago.

As is the case, however, with one state Senate seat and one state House seat, the margin between the candidates in the 15th District is so close that a re-count will be needed to decide the winner. The incumbent, Paul McHale, is a Lehigh County Democrat. The challenger is Jim Yeager.

State Senate Republicans built their 29-21 majority by winning three of the four "open" seats and holding their likely loss to the heavily contested Marks/Tartaglione race in the 2nd District. As a bonus, they were able to trade a probable Marks loss for a strong win by challenger **Dan Delp** in the 28th District (York). Delp defeated incumbent Mike Bortner by polling 57 percent of the vote in the upset.

The three Republican winners in the open seats were all "takeovers" that brought new seats into the Republican caucus. Those three winners were **Joe Uliana** in the Reibman seat (Northampton County), **Jim Gerlach** in the Pecora seat (Chester County), and **Tommy Tomlinson** in the Lewis seat (Bucks County). Uliana overcame a 15,000 registration deficit to win by almost 1,000 votes. Tomlinson also faced a registration deficit.

The only Democratic wins in open seats were turned in by **Rich Kasunic** in Fayette County and **Vince Hughes** in Philadelphia. Kasunic replaces fellow Democrat Bill Lincoln. Hughes won the special election to replace Democratic congressional candidate Fattah.

Uliana, Gerlach, Tomlinson, Hughes, and Kasunic are all veteran House members who made the jump to the Senate. They and Marks all had the support of the Pennsylvania Medical Political Action Committee (PAMPAC). If Marks retains his seat after the expected re-count and court challenges, the Republican majority would be 30-20.

State House results showed very little change. Although each party won an open seat that had been in the hands of the opposition, the Democrats were also able to defeat an incumbent Republican. The most interesting development was the unresolved race in Northampton County.

In the open seats, Republican **Pat Browne** won his bid to replace retiring Karen Ritter (Lehigh County). Meanwhile Democrat **Lisa Boscola** took the seat formerly held by Uliana (Northampton County). The Democrats built on their majority by defeating incumbent Ralph Acosta with newcomer **Ben Ramos** (Philadelphia). After losing the primary election as a Democrat, Acosta had changed parties and joined the Republican caucus.

→

Both parties claimed a win in the Northampton County seat held by incumbent Frank Yandrisevits, a Democrat. He was challenged by Julie Harhart. As a result the Democratic majority is at least 102-101, and it could become 103-100.

House Republicans were unable to score victories in the legislative races where they sent strong challengers against incumbents thought to be vulnerable. In the balance of the open seats, each party held its own. It is expected that both House caucuses will have closely contested leadership elections behind closed doors.

There was a guarantee of change in our **Congressional** delegation as a result of the decisions by Tom Ridge and Rick Santorum to leave the U.S. House and seek other offices, the retirement of Austin Murphy, and the primary defeat of Lucien Blackwell.

Candidates supported by AMPAC/PAMPAC were winners in three of the four open seats and in two of the elections in which first-term incumbents were defeated.
In Philadelphia, **Chaka Fattah** (D) won his bid to succeed Blackwell after defeating the incumbent in the primary. Other first-time Democratic winners were **Frank Mascara** (Washington County) and **Mike Doyle** (Allegheny County). Doyle replaced Santorum, and Mascara replaced Murphy.

The Republicans had one "takeover" win as **Jon Fox** (Montgomery County) beat Marjorie Mezvinsky. As noted above, the McHale-Yeager race is "too close to call." Both McHale and Mezvinsky were serving their first terms.

Finally, in another close race, Republican **Rick Santorum** defeated incumbent Harris Wofford for a U.S. Senate seat. The defeat of the first-term senator came in one of the pivotal races that was monitored nationwide.

The author, Andrew W. Gurman, MD, an Altoona orthopedic surgeon, is chairman of PAMPAC.

HEALTH SYSTEM REFORM

ONE HUNDRED DAYS AND COUNTING

While it's hard to believe that more than two years have passed since President Clinton promised health system reform legislation "in the first 100 days," the debate on reform seems to have lasted 100 years. Let's take a few minutes to reflect back on that debate, and look ahead to what's anticipated for 1995.

Reflecting back

It was in 1993 that Hillary Rodham Clinton, Ira Magaziner, and a small group of "experts" took on the task of developing reform legislation. But, what was thought possible in 100 days quickly became more complicated than anticipated. Mrs. Clinton became the target of intense criticism, and the issues became the center of a rope being "tugged" in both directions.

The initial presentation of the Clinton plan to Americans was pushed off from spring until early summer, from early summer until late summer, and finally, from late summer to early fall. When the infamous "health security card" speech made it to the airwaves in October 1993, President Clinton called for universal coverage, employer mandates, health alliances, and portability, just to name a few initiatives—and proposal of legislation was again pushed off, this time to the summer of 1994.

As the new year rang in, health care remained one of the president's top three issues. But within three months of presenting his non-negotiable reform package, President Clinton was ready to compromise with Congress, as long as he could still assure coverage for every American through an employer mandate. That action triggered proposal of a number of reform bills in Congress, each seeking a different resolve—whether it be universal coverage, a single-payer system, employer sponsorship, tax breaks, or minor adjustments to the current system.

Likewise, on the state level, Governor Casey's '94 agenda included health system reform and a call for passage of legislation to "overhaul" the system. But a shift in Senate majority early in the year decreased the chances of the General Assembly passing any reform legislation in 1994.

The issue was quickly cooling in Harrisburg; the gubernatorial primary election and budget negotiations overshadowed all reform efforts. In a public statement in May, Governor Casey criticized the legislature for ignoring the health system reform issue.

By late summer, though the Clintons continued to travel in support of their plan, it was evident that reform legislation would not be passed in 1994. The official "death certificate" came in late September from Senator George Mitchell.

Looking ahead

With reform dead at the national level, all eyes are on the state level. Though in Pennsylvania the debate never really began, the commonwealth has been recognized nationally for some innovative efforts, including: the Children's Health Insurance Program, funded by a two-cent-per-pack cigarette tax; implementation of managed care programs to better handle Medical Assistance patients; and the establishment of the Pennsylvania Health Care Cost Containment Council in 1986 to evaluate physicians and hospitals.

But all roads seem to lead back to Washington, where President Clinton has promised new legislation next year, one issue at a time, and all major players in the national debate have vowed to return to the issue quickly in 1995.

Among the president's goals for the new plan are a reduction in the growth of health care costs and an expansion of coverage through Medicaid and voluntary insurance pools. Funding is proposed through Medicare cuts and sin taxes; his non-negotiable issues of universal coverage and employer mandate are expected to be absent from the plan.

FILIBUSTER ENSURES FREEDOM OF SPEECH

A filibuster in Congress will allow individuals and associations, such as the State Society and the AMA, to continue practicing freedom of speech before Congress without being hampered by fines and taxes.

The proposed Lobbying Disclosure Act of 1993 would have limited grassroots activities of special-interest groups. The federation of medicine opposed the legislation, which proposed "onerous reporting requirements" and "would create another bureaucracy." The federation also maintains that such an act "may have a chilling effect on free speech and will make it more difficult for American citizens to have their voices heard in Washington."

YOCON®
YOHIMBINE HCl

Description: Yohimbine is a 3a-15a-20B-17a-hydroxy Yohimbine-16a-carboxylic acid methyl ester. The alkaloid is found in Rubaceae and related trees. Also in Rauwolfia Serpentina (L) Benth. Yohimbine is an indolalkylamine alkaloid with chemical similarity to reserpine. It is a crystalline powder, odorless. Each compressed tablet contains (1/12 gr.) 5.4 mg of Yohimbine Hydrochloride.

Action: Yohimbine blocks presynaptic alpha-2 adrenergic receptors. Its action on peripheral blood vessels resembles that of reserpine, though it is weaker and of short duration. Yohimbine's peripheral autonomic nervous system effect is to increase parasympathetic (cholinergic) and decrease sympathetic (adrenergic) activity. It is to be noted that in male sexual performance, erection is linked to cholinergic activity and to alpha-2 adrenergic blockade which may theoretically result in increased penile inflow, decreased penile outflow or both.

Yohimbine exerts a stimulating action on the mood and may increase anxiety. Such actions have not been adequately studied or related to dosage although they appear to require high doses of the drug. Yohimbine has a mild anti-diuretic action, probably via stimulation of hypothalmic centers and release of posterior pituitary hormone.

Reportedly, Yohimbine exerts no significant influence on cardiac stimulation and other effects mediated by B-adrenergic receptors, its effect on blood pressure, if any, would be to lower it; however no adequate studies are at hand to quantitate this effect in terms of Yohimbine dosage.

Indications: Yocon® is indicated as a sympathicolytic and mydriatic. It may have activity as an aphrodisiac.

Contraindications: Renal diseases, and patient's sensitive to the drug. In view of the limited and inadequate information at hand, no precise tabulation can be offered of additional contraindications.

Warning: Generally, this drug is not proposed for use in females and certainly must not be used during pregnancy. Neither is this drug proposed for use in pediatric, geriatric or cardio-renal patients with gastric or duodenal ulcer history. Nor should it be used in conjunction with mood-modifying drugs such as antidepressants, or in psychiatric patients in general.

Adverse Reactions: Yohimbine readily penetrates the (CNS) and produces a complex pattern of responses in lower doses than required to produce peripheral a-adrenergic blockade. These include, anti-diuresis, a general picture of central excitation including elevation of blood pressure and heart rate, increased motor activity, irritability and tremor. Sweating, nausea and vomiting are common after parenteral administration of the drug.[1,2] Also dizziness, headache, skin flushing reported when used orally.[1,3]

Dosage and Administration: Experimental dosage reported in treatment of erectile impotence.[1,3,4] 1 tablet (5.4 mg) 3 times a day, to adult males taken orally. Occasional side effects reported with this dosage are nausea, dizziness or nervousness. In the event of side effects dosage to be reduced to ½ tablet 3 times a day, followed by gradual increases to 1 tablet 3 times a day. Reported therapy not more than 10 weeks.[3]

How Supplied: Oral tablets of Yocon® 1/12 gr. 5.4 mg in bottles of 100's NDC 53159-001-01 and 1000's NDC 53159-001-10.

While many of the past winners of the Pennsylvania Medical Society's Distinguished Service Award were honored for their pioneering and technological advances, Robert W. Ford, MD, of Allison Park, the most recent recipient of the award, was recognized for his respect of tradition: Daily, he lives the Hippocratic Oath.

1994 Distinguished Service Award:

Living the Oath

Maria T. Montesano
Assistant Managing Editor

After 20 years in medicine, a physician may find himself wanting to do more with his life. And one day, on his way out of his office, he may stop to re-read the Hippocratic Oath, which has been hanging on the wall, yet has gone unnoticed for years. And on that day, the flame will ignite. At least, that's what happened to Robert W. Ford, MD. And so the changes began—for himself, his colleagues, and the people of a remote area of Nigeria.

Dr. Ford this year became the sixteenth recipient of the State Society's Distinguished Service Award. Among the past recipients are Dr. Jonas Salk, Dr. Thomas Starzl, Dr. Lewis Bluemle, and in 1993, Dr. George Magovern Sr.

At its annual business meeting in October, the Society awarded Dr. Ford the distinguished service medallion "in recognition of his meritorious service in the art and science of medicine and for his World Health Mission work which reflects great credit on the profession."

Dr. Ford accepted the medallion and recognition humbly, with a tear in his eye. "What I've done is just a little thing, something that just has come naturally for me," he says. "I wake up, and it's part of me." He views the past recipients of this award as "giants in medicine," contributing in ways that have benefited mankind technically. "I have made a different contribution to life, making it better in different ways. Hopefully, I've touched more people than I've ever realized."

A man of heart

Dr. Ford, a native of Pittsburgh, decided in high school to pursue a medical career. After receiving a bachelor's degree in chemistry from Franklin and Marshall College, Lancaster, he attended Temple University School of Medicine, Philadelphia, earning his medical degree in 1963. He then moved west, to complete an internship and residency at Presbyterian Hospital, Denver, Colorado.

Two things happened to Dr. Ford in Colorado. First, though he had gone there to become a family physician, he quickly recognized that the specialty of obstetrics and gynecology was where he belonged. "It was a natural field for me," Dr. Ford says. "It was a little bit of surgery, a little bit of medicine, and a little bit of consulting with patients about their health and personal problems." To this day, the one-on-one with patients, and getting their health "on the right track," are what he enjoys most in the office. But, he adds, "Delivering babies is pretty exciting, too."

The second milestone of his life in Colorado was meeting his future wife, Karen, who is quite involved in her husband's humanitarian efforts. "I'm glad I met the woman I met, and married her 27 years ago," Dr. Ford says. "She was a school teacher in Denver, I was from Pittsburgh, and we just hit it off. We've had a nice life...a good life. I was lucky."

The Fords returned to Pittsburgh in 1967, where Dr. Ford has been in private practice ever since. He is also chairman of the Department of Obstetrics and Gynecology at North Hills Passavant Hospital, a position he assumed in 1988. His

professional activities include serving as a member of the hospital's executive committee, chairman of Pennsylvania Blue Shield's Board of Directors Medical Review Committee, and in recent years he has been an active member of organized medicine at both the county and state levels. He and his wife are the parents of two boys.

Yet, there is more to Dr. Ford than meets the eye. In talking with him, you notice instantly that his manner is quiet, his tone calm; and he exudes a "goodness" that lingers with you long after your conversation ends. You are left knowing you, too, can be a better person—patient and caring and purposeful, comforting, and, yes, humble. These qualities are a reflection of the satisfaction Dr. Ford has found since that one day in his office, the satisfaction in working with the World Health Mission.

A mission of hope

Dr. Ford established the World Health Mission in 1988 with the help of Dr. Olu Sangodeyi, chief of surgery at North Hills Passavant Hospital and a native of Nigeria. The basic philosophy of the program when it started, Dr. Ford says, was "to serve and work for the betterment of some part of the world."

"In November 1991, six of us stepped off the airplane in Nigeria in the dark, not knowing anybody or anything. We didn't know what we were getting into. We drove four hours into the desert, to a hospital in a town of 200,000 people." The hospital is Jos University Hospital, Jos, Nigeria, Africa.

He says that, initially, the focus of the program was more personal, developing the obstetrics and gynecology operations. But that has changed over time. "I have developed more of an interest now in the hospital as a global project," Dr. Ford says. "What I've tried to do over the last few years is seek out areas in the hospital that need assistance. I ask, 'What do you need? What can we do for you? Is there anything I can help you with?' "

Upon returning to the U.S., he begins work to fill those needs. For instance, he is currently focusing efforts on further developing the hospital's existing neonatology unit.

But he says preparing for each trip also is quite complicated and time-consuming, requiring about six months. There is equipment to transport to Nigeria, physicians and technicians to recruit for the journey, educational materials to gather, and "red tape." "You have to prepare, you have to pack, you have to get things, you have to pay for all the equipment that has to be taken over, you have to get professionals to run the equipment, you have to make sure the machines work." Dr. Ford credits his wife for taking a lead role in the preparation for each trip.

Currently, the Fords are preparing for a trip next month. An ultrasound expert, a pathologist, a urology professor, a maxillo-facial surgeon, an otolaryngologist, and two anesthesiologists will lend their expertise, and Dr. Ford will be helping resident physicians use a colposcope for cancer screening. They will work continually during their 18-day stay, and the Fords will visit another Nigerian hospital to see what the mission might be able to contribute there in the future. Funding for the trip comes from the participating physicians, church or hospital sponsorships, grants, and donations to the mission.

Dr. Ford admits that while the mission "doesn't consume my every minute, sometime during each day, I think about it." Amidst practicing medicine and preparing for the January trip, he continues to work on other requests that come to the mission. Currently, he has requests for a card file to help the Jos hospital organize its patient admissions, for hepatitis testing kits, for surgical gloves, and even for a dentist to travel to Nigeria with him in the future.

"In spite of all of the turmoil and travail, for many of us, that oath still lives."

Dr. Ford

As for the long-term future, Dr. Ford isn't sure what will happen with the mission. But he does say that, no matter what occurs, "The people in Jos will never forget us, and we'll never forget them. We've been able to contribute exactly what they've needed...and they've made us better for it. I can sit down now with Nigerians, and I look at them as personal friends and professional colleagues. I have a very warm spot in my heart for that relationship...Though material things and politics and religion sometimes complicate the process, working together is really the key."

An example for all

Still, in the end, it all comes down to the Hippocratic Oath, Dr. Ford says. "It's so easy in medicine today to get lost in pressures of third parties and liability, and the demands and the restraints. That's what I discovered in the mid-'80s: I was getting involved in a lot of that and getting away from the real oath."

"I truly believe the Society should be commended for still recognizing holders of the oath," he adds. "In spite of all of the turmoil and travail, for many of us, that oath still lives."

He would advise all physicians to go back and re-read the oath. "Just think about it and where you are in life. Are you really going in the direction you want to go? At one time I wasn't, but I feel now, when I look at the Hippocratic Oath, that I live it."

As his county society stated in his nomination, "Surely Dr. Ford's efforts set an example for all physicians." ⬡

Dr. Ford and the World Health Mission were featured in the May 1994 issue of PENNSYLVANIA MEDICINE (pages 32-33). For more information about the mission, call Karen Ford at (412) 487-6611.

Poised for Tomorrow: An Inside Look at The Educational and Scientific Trust

Matthew Tornambe

"Where there is a love of man, there is a love of medicine."

Hippocrates

These words by the father of medicine aptly describe the philosophy of The Educational and Scientific Trust of the Pennsylvania Medical Society. Since 1954, the Trust has worked to benefit both man and medicine through its philanthropic activities. Although the Trust's philosophy has not changed over the years, its focus has. It has evolved from being known primarily for the medical student loan program, to the organization it is today—which includes seven major program areas, assets of $8 million, an annual $1.5 million budget, and a staff of 17.

Physicians have always understood the value of philanthropy. It occurs when people see a need and respond to effect change. As the Trust looks to the future, it will be joining forces with others who share its values to tackle critical issues facing medicine and the citizens of the commonwealth. For 1995, the Trust has aimed its sights high and set the following goals:

- establish a coalition of health professionals, public health advocates, government officials, and corporate leaders to jointly address Pennsylvania's public health priorities;
- equip physicians to adopt a leadership role in responding to changes in today's health care marketplace;
- build a network of former Physicians' Health Programs (PHP) participants across the state to assist PHP staff with program activities on the local level;
- enhance the Trust's loan programs to more effectively provide medical and allied health students with financial support to complete their education; and
- encourage more physicians to contribute their time and money to supporting the Trust's programs.

Mr. Tornambe became executive director of the State Society's Educational and Scientific Trust in February 1994.

Public health needs

The Trust was originally established as a nonprofit, charitable organization to address public health needs on behalf of physicians in Pennsylvania. In 1992, it created Keystones of Public Health in an effort to return to that original mission. Further expansion of this project will be a Trust priority in 1995.

Often, groups working in public health have not included all the players—physicians, hospital administrators, government officials, representatives of public health organizations, and corporate leaders—in addressing issues. Unfortunately, in the past, many of these groups never talked to each other, or worse yet, refused to work collaboratively.

The Trust's goal with this program is to pull together these interested groups to jointly identify and address Pennsylvania's most critical public health needs. The contention is that solutions are more effectively defined and implemented when all the stakeholders, particularly those closest to the issue, participate.

The Trust believes that, ultimately, good public health will be obtained only when there are no incidences of preventable diseases or injuries and when individual members of society can expect to maintain high levels of personal health. This may seem a lofty goal, but it is attainable by changing unhealthy behaviors. The Keystones of Public Health coalition will target some of these behaviors in its educational activities during the coming year.

Physician leadership

Another Trust priority for the coming year will be expansion of the Institute for Physician Leadership. The institute trains physicians to be dynamic leaders of their institutions and professional organizations; its focus for 1995 is the emerging physician leaders in the new health organizations—such as physician organizations (POs), physician-hospital organizations (PHOs), and other vertically integrated physician entities—that are being created by the changing medical marketplace.

Physicians in these new corporate structures often are not involved in their state or county medical society, or part of

the hospital medical staff leadership. However, these physicians will become increasingly important in shaping the health care environment. Programs such as "Cost-Effective Clinical Decision Making," "Leadership Style Assessment," and "Consensus Development" are now among the institute's educational offerings. The institute has also been working very closely with the PennMed Member Services Company (PMSCO), the State Society's consulting company, to jointly address the needs of this new physician group.

Physician health

PHP has been a thriving component of the Trust's services and will continue to grow during the coming year. PHP offers advocacy and support to physicians experiencing impairment from physical, emotional, or mental conditions. Drug and/or alcohol abuse is the primary cause of impairment with which the PHP deals.

Currently, all PHP activity is centralized in Harrisburg. In 1995, the program will focus on developing a network of physicians across the state who will work locally with colleagues with impairment. Former program participants will be recruited to join the network.

In November, for example, the Trust brought former PHP participants together at a dinner in Hershey. This highly successful event enabled these physicians to talk to others who experienced similar problems. It also gave the Trust the opportunity to show the physicians how they can give back to the program, both financially and by volunteering to assist PHP staff at the local level.

PHP sees the need for its services increasing in years to come due to earlier identification and referral of professionals with impairment. Presently, its community outreach is conducted primarily through hospital medical staffs.

Because physicians in the future will be more involved in organizations outside the hospital structure, it is important that PHP's reach extends to all the different entities where physicians will be working, to deliver services and encourage early referrals. By creating this voluntary network of local physicians, the program will be able to adapt to the changing health care structure and the needs of physicians.

Aid to students

The most well-known Trust service is its student loan program. It has provided almost $10 million in financial assistance to more than 3,200 medical and allied health students. This crucial activity makes a significant difference in the lives of many struggling students.

To enable the loan program to meet the evolving needs of students in the '90s and beyond, the Trust will be conducting a full-scale marketing study on this program in 1995. The Trust has been operating under policies and guidelines that were developed many years ago. The environment has changed, the needs have changed, and so has medical education.

Through this marketing study, Trust staff members will be talking to students, former loan participants, and financial personnel at the state's medical schools to determine how the loan program can better meet the needs of each group. By 1996, the Trust will be able to implement changes, making the program more attractive to Pennsylvania's medical and allied health students.

A call for help

The most important challenge for the Trust in 1995 is to get more Pennsylvania physicians involved in its programs and activities. To build its services and attract the financial support needed to attain the goals just outlined, the Trust needs physician volunteers to serve on program committees and in leadership positions.

During the coming year, the Trust will use its marketing skills to identify physicians who are involved in or show interest in the various Trust program areas—public health, student loans, physicians with impairment, and physician leadership. These physicians will be personally asked to volunteer their time and expertise to help the Trust meet its future challenges. The Trust will also expand its fundraising activities and conduct several aggressive, innovative campaigns in 1995 to increase its financial resources.

Why should you give your time and/or money to the Trust? Abram Hostetter, MD, chairman of the Trust's board of trustees, recently pointed out some personal benefits physicians receive from giving: "I think contributing to the Trust makes a person feel good about himself or herself. You are giving to a charity that is specifically identified with medicine, and which does a specific good for the next generation of physicians and the public. By supporting the Trust, you gain the satisfaction of knowing your gift makes a difference. You also become part of an organization that serves and will continue to serve not only the medical profession, but society as a whole."

Want To Help?

Physicians have many opportunities to become involved in the programs and activities of The Educational and Scientific Trust. The Trust is always looking for physicians to serve on program committees or to volunteer for a specific project. For example, a physician may choose to work in a designated program area, such as Keystones of Public Health or the Institute for Physician Leadership, or he or she may wish to help for a limited time on a specific activity, such as Trust fundraising.

You can always help by making a gift. When doing this, you may indicate that your contribution be used for a specific program or project, such as the Physicians' Health Programs or the student loan program. Send your tax-deductible donation to: The Educational and Scientific Trust, 777 East Park Drive, P.O. Box 8820, Harrisburg, PA 17105-8820.

For more information about any of the Trust's programs or services, or if you want to volunteer to help, call us at (800) 228-7823.

Treating HIV in Pennsylvania

Maureen Hoepfer

John J. Dennehy, MD, FACP, is emeritus director of the Department of Infectious Diseases at Geisinger Medical Center, Danville. Since the mid-1980s, he has been involved with the treatment of and the political issues surrounding HIV infection. Currently, HIV-infected patients comprise 80 percent of his outpatient practice.

Since the first report of AIDS was published in the June 5, 1981, issue of *Morbidity and Mortality Weekly Report*, the United States has come a long way in managing the medical and political issues presented by this deadly disease, says John J. Dennehy, MD. However, he adds that the HIV epidemic is getting worse, and he does not see a cure on the horizon.

"To date, there have been more than 360,000 cases of AIDS reported in the United States. Pennsylvania alone has had almost 12,000 cases," Dr. Dennehy says. "The sad part is, overall, more than 60 percent of these patients have died."

Statistics from the Centers for Disease Control and Prevention show some disturbing trends in the progression of the disease, according to Dr. Dennehy:

- HIV infection has become the most common cause of death for men between the ages of 25 and 45 in the Unites States.
- Heterosexual women make up the most rapidly growing population group acquiring new cases of HIV infection. Currently, HIV is the fourth most common cause of death among women.
- The HIV-infection rates among teenagers and the number of babies born to HIV-infected mothers are increasing exponentially.

"Despite all the reports in the media about HIV infection, most people still live with their heads in the sand," says Dr. Dennehy. "Their attitude is, 'HIV will never affect me or my family.' Unfortunately, as the numbers increase, more and more of us will be touched by the disease."

Dr. Dennehy

Progress in HIV management

Dr. Dennehy says medicine has made significant progress in dealing with HIV. He points out that in the past decade, medicine has discovered the cause of the disease, developed tests to diagnose HIV infection, and has significantly improved the prevention and treatment of some of the complications of AIDS.

"We're learning slowly, but we now have more and more new [antiviral] drugs available to help prevent and treat many of the problems brought on by HIV infection. These can vastly improve a patient's quality of life," he explains.

Social service personnel and public health officials have also contributed to improving the lives of HIV-infected patients. For example, the increase in hospice facilities and home health care enables patients to convalesce and die in more humane settings. HIV support groups help patients and families more effectively cope with the trauma associated with the disease.

"We've also made tremendous strides in educating the public about HIV infection," he adds. "Although there is still fear out there, you don't see the hysteria among people that you did when the disease was first made public in the '80s."

Although Dr. Dennehy believes there has not been enough political activity to deal with the HIV problem, he cites some progress. HIV-infected patients now have some protection under anti-discrimination laws. As an example, he points to the Americans with Disabilities Act which prohibits

Ms. Hoepfer is a marketing associate for the Society's Educational and Scientific Trust. This article is one in a series, begun in January 1993 and ongoing through 1994, sponsored by the Trust's endeavor to address public health needs, Keystones of Public Health.

employers from discriminating against an employee because of a handicap such as HIV infection.

In Pennsylvania, Act 148, the AIDS Confidentiality Law, safeguards all medical information related to an AIDS or HIV-infected patient. Funding for HIV research and education has also increased in recent years, but it is still not enough, he adds.

Flaws in the system

Despite this progress, Dr. Dennehy says there are still many flaws in the systems developed to handle the disease. In Pennsylvania, for example, physicians are not required to report cases of HIV infection to the Department of Health—they are only required to report full-blown AIDS cases. He sees this as a major deficiency.

"Making HIV infection reportable would allow the Department of Health to conduct contact tracing," he explains. "This means the Department of Health would attempt to track down and notify the sexual partners of HIV-infected patients and advise them to get tested."

Contact tracing would enable the department to better track the progression of the disease in the state and allow for earlier detection. "Early HIV detection can prevent the unwitting spread of the virus by an infected patient, ease an infected person's decline, and even save an HIV-positive pregnant woman's unborn child," Dr. Dennehy says. He adds that the Pennsylvania Medical Society has supported attempts to make HIV infection a reportable disease—which is currently the case in 26 states—and advocates contact tracing.

Protecting health care workers

During the past year, Dr. Dennehy, as chairman of the Society's Commission on Public Health, was involved in the development and review of the Pennsylvania Department of Health's "Guidelines for Preventing the Transmission of Human Immunodeficiency Virus and Hepatitis B Virus from Infected Workers to Patients." He was successful in negotiating several major changes in the guidelines which protect the interests of health care workers.

In the original draft, for example, a hospital or health care facility was given primary responsibility for determining when patients should be notified about an HIV-infected health care worker. However, the final guidelines transfer that responsibility to the Department of Health after consultation with the infected worker's personal physician(s).

Dr. Dennehy has also played an instrumental role in educating health care providers, legal professionals, and the public about a wide range of issues surrounding HIV infection. Over the past 10 years, he has given numerous presentations to school groups, lawyers, residents, legislators, and community groups such as Kiwanis and Rotary clubs. While a member of the Society's Task Force on AIDS, he also served as a main reviewer for the Society's "AIDS Information for Physicians," an educational booklet sent to every State Society member several years ago.

Caring for HIV-infected patients

Dr. Dennehy encourages physicians to accept HIV-infected individuals as patients. He explains that most of these patients can be followed by primary care providers who can request infectious disease consultation as needed. "Early on, most HIV-infected patients are asymptomatic and don't need expensive medications. Primarily, all they need are follow-up tests," he explains.

He emphasizes that caring for HIV patients demands a team approach, involving social services, nursing, and family support. "A physician cannot do everything," he says. In managing HIV-infected patients, Dr. Dennehy advises physicians to keep current on treatment advances.

Despite his numerous community activities and work with the Society, Dr. Dennehy says his first allegiance is to his patients. "I'm not an ethicist, lawmaker, administrator, or social worker. I'm simply a physician who cares for HIV-infected patients," he explains. "I've seen the advances we've made in treating these patients and improving the quality of their lives, but too many of them continue to die," he says. "Every patient I lose still breaks my heart. We have a lot of work ahead of us." ⬡

"Making HIV infection reportable would allow the Department of Health to conduct contact tracing."

— John J. Dennehy, MD

Resource for HIV-Infected Physicians

HIV-infected physicians may call the Physicians' Health Programs (PHP) of the Pennsylvania Medical Society's Educational and Scientific Trust at (800) 228-7823 for *confidential* information, referral, and support services. After work hours (8:00 a.m.-5:00 p.m., Monday through Friday), call the PHP's message line at (717) 558-7817, and a staff member will promptly return your call.

Financial Planning in an Age of Managed Care

Robert L. Lamb

While much is written about the effect of managed care on clinical medicine, less has been said about its impact on physician family financial planning.

If managed care is a euphemism for "rationing of clinical resources," the same is true for "physician income." There are few signs of rising income for physicians, hence prudent management of physician family finances is the order of the day.

In an environment of managed physician incomes, how shall medical families maintain their lifestyle, finance their children's education, and still provide for future illness and retirement? Certainly, procrastination is not the answer. An immediate, proactive approach to financial planning is required.

Financial challenges facing physician families include premature death, prolonged life, emergencies, or mental or physical disability. Several tools are needed to address these challenges:

- the will as the cornerstone,
- placing property in trust,
- powers of attorney,
- joint ownership,
- living wills,
- the charitable dimension,
- income and asset management, and
- tax advantages.

For families in their 20s-30s

Be certain that you have adequate life insurance. Understand that insurance protection is different than savings. Life insurance policies which offer savings benefits are a mixed bag and may not be as an efficient use of your money as, for example, would be term insurance.

Begin a retirement program *today*. Ask your financial adviser to run some spread sheets on the effects of inflation over time. This will help you set aside a more appropriate amount.

For families in their 40s-50s

Leave retirement money alone. College bills loom and that vacation house is so attractive, but raiding the retirement funds is not the answer. Success in medical practice sometimes gives the illusion that clinical prowess carries over into business affairs. The temptation to invest in high-yield, risky ventures grows. Resist.

By all means find a financial adviser with a proven track record who is not connected to a product. The odds are that the wisdom of several minds working on your retirement and estate questions will produce a better solution.

Take another look at your auto and home liability policies. Now that you have net worth, you must be certain that it is adequately protected by insurance.

Don't rely on the marital deduction to solve your estate-planning problem. Leaving all your assets to your spouse simply increases the estate tax at the time of that person's death. A better solution is to set up a trust—either in your will or a separate document—to support your family until your spouse's death, when the remaining assets will be paid out to your designated beneficiaries.

For families in their 60s-70s

Make sure your wills are up to date. This is the time of life when events speed up. Grandchildren are born, children divorce, members of the extended family die. Even one year can bring many changes to your family.

Do not allow an excess to accumulate in your qualified plan. Work with your accountant and financial planner to be sure that at the appropriate age, you begin taking out the correct amount from your qualified retirement plan. Take out too much, and you may have to pay an excess distributions tax. Take out too little, and you may have to pay an excise tax for failure to receive the required minimum distribution, and your estate may have to pay an excess accumulations tax.

Don't let your antipathy for lawyers and things legal lead you to create your own simple solution to a complex problem, such as creating joint accounts with your children or grandchildren. The double whammy of federal estate and generation-skipping transfer taxes on such joint ac-

Mr. Lamb is planned giving officer of the Society's Educational and Scientific Trust.

counts will deprive the surviving joint owner of a significant amount of the balance in the account.

Sign durable powers of attorney and living wills.

Keep some money in stocks. In retirement, many families move most of their money out of the stock market into fixed income investments. But inflation is no respecter of age. A hedge against inflation is still necessary.

Check out the total tax structure in retirement communities before making a move. Low state income taxes could mean high sales taxes.

Remember the IRS annual $10,000 gift tax exclusion. You can reduce the size of your estate by gifting up to $10,000 per person per year.

Check the beneficiaries on instruments related to your estate, such as insurance policies, retirement plans, bank and brokerage accounts. Life is a series of changes, and you may be surprised by some of the names on those instruments.

Philanthropic contributions

Consider making a philanthropic statement. Now is the time to think about what you will leave behind when you join that big group practice in the sky. Medical families with a charitable intent can assure that their concern for others is continued long after they leave by making tax-deductible contributions to institutions such as The Educational and Scientific Trust.

Many physicians, when they analyze the core values around which they have built their lives, find that *education* stands out. In many ways, education is a synonym for medicine. That's why the charitable work of the Trust with medical students resonates with so many physicians.

The most frequent philanthropic expression of physicians is a bequest to the Trust. But it is also possible to use the Trust as part of one's retirement plan through such instruments as gift annuities and charitable remainder trusts. These plans provide income for you and your spouse in retirement and subsequently constitute a meaningful gift to the Trust.

Augustus S. Kech, MD: Values and Compassion in Perpetuity

Augustus Kech became a physician and then a physician-leader by living out the principles and values he learned as a boy growing up in Snow Shoe, Pennsylvania.

A product of the public schools, with degrees from Lock Haven Teacher's College and Bucknell University, he earned his medical degree from the University of Pennsylvania in 1911. He led his peers at Mercy Hospital in Altoona, first as chief of medicine and then as chief of staff. In 1927, he became president of the Blair County Medical Society, then a trustee of the Pennsylvania Medical Society for 10 years, and finally, its president in 1943.

With a commitment to public health, he became personally involved in school immunization programs, mosquito control, water purification, TB clinics, and the Red Cross Disaster Team, to name a few. While these activities mark Dr. Kech as a truly community-minded physician, what makes him noteworthy, thirty-some years after his death, is the fact that he had the foresight to assure that his medical compassion would continue forever.

In his will, after providing for his family throughout their lifetimes, he made six-figure bequests to the Medical Benevolence Fund of the Pennsylvania Medical Society (which is managed by The Educational and Scientific Trust) and to the medical student loan program of the Trust. In so doing, Dr. Kech has assured that his values will continue to be met as he would want. All it took was the wisdom to add a few words to his will. Consequently, his caring and compassion will continue to touch lives in perpetuity.

Are you concerned about the future of medicine? ...about the future health needs of your community? Talk to us about ways the Trust can assure that your values will be advocated, even after your death.

Estate Planning for Physicians

Please send me the free pamphlet, "Why You Should Have An Estate Plan."

County _____ Telephone _____

Bob Lamb, Planned Giving Officer, The Educational and Scientific Trust,
P.O. Box 8820, Harrsburg, PA 17105-8820, (800) 228-7823

John A. Carlson Jr., MD, director of gynecologic oncology, Thomas Jefferson University Hospital, Philadelphia, has been elected to a one-year term as president of the Pennsylvania Oncologic Society.

Pittsburgh cancer surgeon **Norman Wolmark, MD,** Allegheny General Hospital, was selected by the executive board of the National Surgical Adjuvant Breast and Bowel Project (NSABP) as chairman of the nation's breast cancer research project. He replaces Bernard Fisher, MD, the Pittsburgh surgeon who was asked to step down as NSABP chairman this year after revelations of fraud and error in NSABP projects.

Dorothy Lansing, MD, Paoli, has received the Otis R. Bowen, MD, Distinguished Leadership Award from her alma mater, Indiana University School of Medicine, Indiana. Dr. Lansing practices gynecology and is the historian and archivist for the Obstetrical Society of Philadelphia.

Richard P. Moser, MD, Hummelstown, professor of radiology and **John E. Madewell, MD,** Hershey, professor and chairman of radiology, Penn State's Milton S. Hershey Medical Center, have been named fellows of the American College of Radiology.

Dr. Wiener

David H. Wiener, MD, has been promoted to the position of associate professor of medicine in the cardiology section, Temple University School of Medicine, Philadelphia.

Barbara L. Fowble, MD, Rydal, has been appointed staff radiation oncologist and associate director of the breast cancer program, Fox Chase Cancer Center, and **Gerald Hanks, MD,** chairman of radiation oncology, has been awarded the Gold Medal by the American Society for Therapeutic Radiology and Oncology. The Gold Medal is given to physicians who have made outstanding contributions to the development of therapeutic radiology and oncology. The Center has also named **David B. Sokol, MD,** as the first Berlex Laboratories Fellow in Medical Oncology and **Nava Siegelmann, MD,** the first Ortho Biotech Oncology Fellow in the Medical Oncology Department. Also, at Fox Chase, **Louis M. Weiner, MD,** Elkins Park, has been appointed chairman of the Medical Oncology Department, Division of Medical Science.

Pottsville Hospital and Warne Clinic have appointed **Carlos X. Villarreal, MD,** to a three-year appointment as cancer liaison physician for the Hospital Cancer Program. The program is an integral part of the Commission on Cancer of the American College of Surgeons.

Dr. Trooskin

The Medical College of Pennsylvania and the Hahnemann University School of Medicine, Philadelphia, have named **Stanley Z. Trooskin, MD,** director of trauma and surgical critical care for the integrated trauma program.

Warren A. Katz, MD, chairman, Department of Medicine, Presbyterian Medical Center, Philadelphia, was a speaker at the October 20 American Medical Association briefing entitled, "Pain: Evaluating and Managing What Hurts."

Michael I. Cheikin, MD, has been appointed medical director, Chestnut Hill Hospital Springfield Center, which encompasses Chestnut Hill Rehabilitation Hospital and the Springfield Residence retirement community.

Susan J. Denman, MD, Bala Cynwyd, was appointed chairman, Division of Geriatric Medicine, Albert Einstein Medical Center, Philadelphia. Dr. Denman has also be appointed medical director and senior vice president of medical affairs at the Philadelphia Geriatric Center.

Kevin R. Fox, MD, associate professor of medicine, University of Pennsylvania Medical Center, Philadelphia, was recognized for teaching excellence in oncology at the University of Pennsylvania Cancer Center.

Esther J. Nash, MD, clinical professor, Jefferson Medical College, Philadelphia, has been appointed director of the Prudential Health Care Plan, a Horsham-based health maintenance organization.

Barbara Troupin, a fourth-year medical student, University of Pennsylvania School of Medicine, Philadelphia, has been named as a 1994 Pisacano Scholar by the Nicholas J. Pisacano, MD, Memorial Foundation.

University of Pittsburgh Medical Center has appointed **Marc D. Feldman, MD,** associate professor of medicine, Division of Cardiology, and director, Cardiac Catheterization Laboratory.

The Philadelphia College of Osteopathic Medicine has appointed **Izola B. David, DO,** director of pediatrics.

St. Joseph's Hospital, Philadelphia, has named **Rafael Jose Revol, MD,** director of the Ambulatory Neurology Department.

University of Pittsburgh Medical Center has named **Steven Reis, MD,** director, Women's Heart Center.

Penn State's Milton S. Hershey Medical Center, Hershey, has appointed **Brian Holmes, MD,** assistant professor of surgery.

Arthur David, MD, was elected to a two-year term as a director of the Pennsylvania Academy of Family Physicians.

Atshushi Ogata, MD, was the recipient of the 1994 Brian D. Novis Research Grant, which will support his research project on the analysis of IL-6 signal transduction in myeloma.

Salvatore Mangione, MD, associate professor of medicine, Medical College of Pennsylvania, and director of the Asthma Center, has received a five-year grant from the National Heart, Lung and Blood Institute of the National Institutes of Health. In collaboration with the Asthma Task Force of Health Partners—a Philadelphia-based voluntary, nonprofit managed care organization for Medicaid recipients—Dr. Mangione will teach more advanced principles of asthma management to medical students, residents, and practicing physicians. The core of his program will be a continuing medical education program for Health Partners' medical providers.

COPING WITH KALEIDOSCOPIC CHANGE

Pennsylvania Medical Society
Leadership Conference
May 2-3, 1995
Harrisburg Hilton and Towers

KEYNOTE ADDRESS—Jeff Levine, CNN correspondent since 1980, assigned to medical legislation and regulation activities on Capitol Hill, Washington.

PLENARY SPEAKERS *(topic titles tentative)*:

"A Look Ahead in Pennsylvania"—William L. Kissick, MD, DrPH, professor of health care systems, The Wharton School, University of Pennsylvania.

"California's Experience with Managed Care"—Eugene S. Ogrod, MD, chairman of the Board of Trustees, California Medical Association.

INFORMATION-PACKED WORKSHOPS, INCLUDING:

- how to form groups from solo practices
- leadership and team development
- technology in the doctor's office
- practice parameters—the Maine experience

QUESTION-AND-ANSWER SESSION WITH SOCIETY LEADERSHIP

AN EVENING OF ENTERTAINMENT

EXHIBITORS...IDEAS, SERVICES, CONTACTS

AND COLLEAGUES FROM ACROSS PENNSYLVANIA

Registration fee—$70. *Still the best medical society conference value.*

Developing A Business Plan for Your Practice

The Health Care Group

As the American medical environment undergoes rapid change—at times akin to upheaval—most practices will be faced with a simple choice: adapt or suffer possibly terminal business losses. A surplus of about 165,000 physicians is expected by the turn of the millennium†; virtually all will be specialists. To prosper, or in some cases just to survive in this unforgiving environment, you must treat your medical specialty practice as a business, and plan for the future.

A business plan cannot insure continued growth and success, but developing and implementing one establishes the course a practice will follow to adapt to a new health care environment. Conversely, the lack of a plan will leave the physician without a road map, careening into the future in a vehicle that will become increasingly difficult to control as the terrain continually shifts and the roadway buckles.

In the typical five-step medical practice business plan, the first three steps establish a well-designed blueprint for action, the fourth sets it in motion, and the fifth keeps it dynamic, so it can change not only as better information becomes available, but also in response to unforeseen changes in the health care environment:

1) Analyze Your Practice Environment: Find out where your practice is, internally and externally. Determine, for example, your patient, referral, and payer demographics; the profitability of your services; and your hours of operation. Identify and study your competitors, the area hospitals, and the managed-care plans in your region. Find out how the practice patterns and standards have changed.

2) Define Your Practice Goals: Decide where you want your practice to be. Ask yourself and your partners, if you have them, relevant questions about important issues such as whether you want the practice to be more specialized or less, how much more income you want, which services you should offer, how large or small your practice should be, and whether you plan to retire soon.

3) Develop Your Plan: Figure out the best way to get from where you are to where you want to be. Make sure your plan is a written document, so nothing slips through the cracks or becomes uncertain over time. Start with a vision statement. Define what you want your practice to become, and how to make it so.

4) Execute Your Plan: Now, do it. It is a bad idea to file the plan in a drawer and just wait for it to happen. Wishing will not get the job done. Most plans fail because they are executed poorly or not at all.

> ***"The overwhelming majority of physicians must pay attention to the health care environment."***

5) Monitor Your Plan: You must evaluate the plan to make sure it is working well. If you are not fulfilling your goals, find out why not. Measure the plan's performance relative to steps 1-4. If the plan is not working, make the necessary adjustments.

Analyze your practice environment

If you are internationally recognized as one of the great medical doctors of all times, you have no worries; despite the environment, despite managed care, despite capitation, you will prosper. But there are very few Michael DeBakeys in the world. The overwhelming majority of physicians must pay attention to the health care environment.

With fewer patients being referred to specialists, and compensation for services either dropping or holding steady, if there is a surplus of specialists, either all specialists' income will decrease as every specialist sees fewer patients or, much more likely, some specialists will get enough patients to survive or prosper, and some will not.

Simply, there will be winners and losers. The exception to the rule is the doctor who is near retirement age, who simply coasts out to the end of his or her career. A business plan designed to help you deal with a rapidly changing, increasingly hostile health care environment will help you become a winner.

The first step is to find out what is going on. Generally, you must understand the demographics of your patients, your payers, and your referring physicians; know how they perceive you; and know what they expect of you. Know which procedures in your specialty make money and which lose money.

Outside the practice, find out what competing practitioners are doing for their patients and referrers. Find out what is going on in the hospitals. Determine which managed care plans are big in your area, and consider which ones you might want to join.

Know what legislation has been recently enacted and what is proposed—*your county and state medical society publications are key to this.* Understand how it will affect your practice of medicine and your medical business. Know what you can do to affect decisions that are pending. Keep abreast of changes in practice patterns and standards of care.

Also, because of the state of the external medical environment, specialty practice is becoming very competitive, so it is necessary to determine the sources of your business and find out how they perceive of your practice so you can cater to them.

Concentrate on your principal referring physicians. If your practice is large, determine your top 50. Visit them personally or have your practice

† *JAMA, 272(3):222-230, 1994*

administrator do it. Find out what they like and, more importantly, what they dislike about your practice. Use a standardized questionnaire. Talk to the doctor or, if the doctor will not, the office manager.

Occasionally, a referring physician may be reluctant to complain face-to-face about something he or she perceives is wrong with your business. Make it part of your job to convince these people that you really do want to know what they think. Encourage their candor.

Suppose, for example, your referrers tell you they find it difficult to reach you by phone, are kept on hold for what seems to be an eternity, and your voice-mail system is a nightmare. Your referrers will feel that they have helped you by mentioning these problems. Further, by actually looking into it, you might be able to correct a big problem, possibly with a minimum of time, effort, and expense.

And while referring physicians send you patients and represent a principal source of your business, remember that the patients are going to talk to their physicians, and if they dislike you, they will not want to visit you again. Eventually, if enough patients convince a particular referrer that they do not want to go to your office, that referrer will find somebody else to do the job. They want to keep their patients happy, and so should you.

Figure out what your patients like about your service and what they want you to do to improve it. Simply handing out checklists to patients lets them know that you really want their business and are willing to work a bit harder—take an extra step—than the competition to get it.

Use satisfaction surveys to poll your patients when they visit. Design a simple questionnaire or checklist they can fill out in a few minutes or even seconds. Ask for their optional comments at the bottom of the form. Set up a box in the office so they can drop off the forms on their way out.

Define your practice goals

You have talked to your customers, the managed-care people, the hospitals, your referring physicians, and determined what they are looking for in a specialty practice. You have researched the legal and legislative issues, and know how they may affect your business. You know your competition. Now set your goals.

The key to successful goal planning is to quantify what you want. Fulfilling a goal such as "to deliver quality care" or "to increase my income" is difficult because you cannot measure the progress you have made toward achieving it; you cannot tell if your plan is working or not.

On the other hand, suppose your goal is to improve your quality of care so that your gross annual income increases from $1 million to $1.5 million, so your personal income increases from $200,000 to $300,000, within five years. From that, it is possible to tell what your practice must look like if you are to achieve that goal, within your practice environment.

For example, perhaps you feel you are working too hard. If your goal is simply to decrease your workload, you can do that in a number of ways, but some of them may put you out of business. If you also have a goal of increasing practice revenues by drawing more patients, you can achieve both goals by decreasing your hours, expanding your service, and bringing aboard a junior associate.

> ***"A well-designed plan will include specific objectives and time frames for their accomplishment."***

Suppose you want more income. How will you get it? If reimbursement increases are impossible or decreases are pending, you must increase the number of patients you see and/or concentrate on performing only those procedures that are reimbursed at a higher rate.

Simply, your goal may be to become the number one specialty practice of its kind in your town. To do that, you may have to offer more office hours, perform more procedures and/or new procedures, market your practice more aggressively, participate more actively in managed care plans, hire another doctor (or two, or more), increase your office staff, open a satellite office, and computerize the practice. Remember to figure out how you are going to finance all that.

You may want to take a shortcut to that goal by joining an existing group. Now, instead of setting timetables and arranging financing, what you have to do is find the practice that needs to do only one thing in order to become number one in your town: Hire you.

Develop your plan

Solidify your ideas and turn them into a formal, written plan. If you fail to commit your plan to writing, it will be nebulous from the start, or it will become hazy with age. To write a useful document, you must generate specifics and think everything through to its logical conclusion.

The plan should include the resources you will need to achieve your goals. You may have to save money, borrow it, or increase your bank line. Know what it will take to accomplish your goals; do the research. Generally, it takes effort to implement a plan, and effort means cost.

A well-designed plan will include specific objectives and time frames for their accomplishment. Vague notions, such as, "Do something, as soon as possible, about controlling the accounts receivable problem," are probably doomed to fail. Do what? The plan doesn't say. When will it start? The plan doesn't address that. If it does happen, is it working up to expectations? Nobody wrote down what to expect.

Specific goals can be measured, such as, "Within six weeks, install a computerized billing and collection system to reduce the accounts receivable to less than X percent of the total accounts billed monthly, by the end of the fiscal year." Now you know what you need to do: Talk with vendors and arrange financing.

If the plan calls for hiring staff, contact A, B, and C personnel experts or put ads in publications D, E, and F; do it before the end of the current business quarter. If you want to join a plan, call X number of plans in which you do not now participate by Y date to investigate. If you want to enlarge the practice, generate a list of candidates—or at least qualifications—and start that process. →

Implement your plan

Typically, when a medical practice's business plan fails, it does so because it was implemented poorly or not at all. Consider the following three case studies.

A subspecialty cardiology practice decided to expand geographically by opening two new offices in nearby towns, so that patients could get their services locally. The idea made sense, but the group performed no demographics study, contacted no referrers, and sent out no announcements. The cardiologists rented the new offices, arranged for telephone service, then contacted a handful of referrers. The result? Two phone calls and one patient seen during the first six months. These physicians are now considering closing one of the new offices.

An MRI center loses an average of one scan a day because of the telephone-answering system. Typically, the referrer calls, cannot get through, and hangs up to phone a different center. On average, an MRI scan costs $800. Losing one a day for 20 working days a month and 12 months a year, this center is losing $192,000 a year. In comparison, adding another phone line, or even hiring a new employee—especially a part-timer—costs very little.

An ophthalmology practice created a plan which was designed, in part, to boost revenue by contacting and setting up appointments for patients who had not been to the office for service within the previous two years. The plan was working, but implementation was not.

The doctor was gung ho for the project when he assigned it to his staff, and they responded in kind. But the existing staff was already fairly severely overworked, and the doctor said to go through the files "whenever you can." So, the staffers made the time for a few weeks, but as the doctor's interest waned, the staff found less and less time to do the extra work, and finally, it just stopped. The staff had gone through the charts from "A" to "D."

If the plan is worth doing, it is worth doing well. The doctor could have hired a part-timer, perhaps a student working after school, to do it, and paid a few dollars for the service.

Monitor your plan

You have the plan, it is a statement of your vision, it incorporates your research and your goals. You finally have it up and running. One problem: There are no results. Or worse, the results are all wrong. But the plan is the plan, and you worked hard to put it together, so you'll just keep right on going until you get it right. Right?

Wrong. Evaluate the plan's performance objectively and make whatever corrections are necessary. Find out why it went wrong. Has the competition changed radically? Has your practice changed? Have you changed? Did you miscalculate something? Move a decimal point the wrong way? You wrote down the plan and included specifics in order to monitor it. Now, use these specifics for assessment.

Perhaps you haven't had any results yet because it took four months to install the system, because you had to wait for the financing, or the two biggest vendors could not fit you in. Perhaps the results are wrong because of a problem in the software, or because you really don't understand how to use the system. Maybe you wanted to reduce accounts receivable to zero, but have since discovered that this is impossible.

Perhaps the entire plan has to be revised because you received a merger proposal you couldn't refuse. Maybe your plan is entirely obsolete because you sold your practice to MegaCare Intercontinental. Then again, maybe that was your plan from the beginning.

At the end of this process, at the very least, you should understand your practice, your practice environment, your goals, and how to achieve them better than you did before you started. And you should have a vehicle that will get you from where you are to where you want to be, and the means to steer that vehicle effectively.

The contributing author, Zvi Weinman, MBA, is a consultant with The Health Care Group, Plymouth Meeting.

Key to Plan Is Good Market Assessment

Physicians who are trying to begin a physician organization (PO) can be paralyzed by the number and scale of decisions that must be made. Paralysis in business decision making can be destructive to groups of physicians who, if organized, could have significant strength. A market assessment can give physicians the information they need to overcome decision-making paralysis, by determining the type of business organization required to successfully integrate physicians in a particular area and forming the foundation for any physician organization's business plan.

The following are a few of the major factors that must be addressed when conducting such a market assessment:

- clarify key stakeholders, and identify decision makers;
- establish the objectives of the PO and develop a vision statement;
- determine educational needs of the physicians who will be asked to join the organization;
- determine the level of autonomy that is required by the physicians;
- identify key strategic issues and critical success factors: national/state trends and local initiatives, local health market assessment of capacity and use of resources, competitor analysis, physicians' mix and profile, key employers, and relationship between the physicians;
- identify quality assurance and utilization review methods;
- anticipate competitors' responses, and minimize the impact;
- identify the financial impact of a PO, including investment and resources required, anticipated benefits, and financial impact on physicians' individual practices; and
- address management and governance issues.

Another important aspect of developing a PO is compliance with Federal Trade Commission guidelines and, in particular, antitrust laws, Medicare and Medicaid regulations, and other legal and regulatory requirements.

Any market assessment must look at the degree of physician integration necessary to succeed and compare it to the degree of integration acceptable to the physicians involved. Long after it is formed, the organization will continue to need this feedback and information base for sound decision making.

The Physician's Image: How's Your Spin, Doctor?

David Woods

The medical society of a southern state is about to launch an inquiry into what the populace thinks of physicians. It could save its members' money. As retired Philadelphia orthopod John J. Gartland, MD, a former president of the American Academy of Orthopaedic Surgeons, puts it in his admirable book, *Medical Writing and Communicating,* "Most patients seem to like their personal physicians, but have a poor and often deteriorating image of physicians as professionals."

What to do? Feel put upon and misunderstood? Appoint "spin doctors" to burnish the profession's public relations? Not a bit of it.

The pharmaceutical industry, which employs tens of thousands, spends millions of dollars on research, contributes immeasurably to our health and well-being, and accounts for a mere eight percent of the gigantic U.S. health care tab, is still a sitting target for many critics. It has a good story to tell, and it has the resources to tell it. Yet, the *way* it tells it—its public relations—leaves much to be desired.

So far as the medical profession is concerned, does the public know that many of its members don't start earning any money until they're in their late twenties or early thirties? Or that they may be in debt, even then, to the tune of $50,000 or $100,000? Or that their malpractice premiums may eat up to $100,000 a year for some "high-risk" specialties? Or that medical decisions based on eight or more years of training may be second-guessed by a high school graduate in an insurance company? Or even that physicians themselves account for only 10 percent of the overall costs of health care in this country?

Of course not. The man in the street (who, by the way, really ought to be in a library researching his facts) cares only that he's paying more and more for coverage, that he's dealing with overburdened doctors and hospitals, and that he's still trying to sort out the gibberish in which most health care information is couched.

The fact is, physicians make a pretty easy target for the *iatrectomists*—those who delight in cutting them up, or down to size. The doctor bashers.

There are those who say medicine has become too depersonalized. Yet, the public wants the best and latest drugs and technology, and physicians' use of these weapons against disease is in part a reaction to the very criticism that predated their arrival—that medicine was too *un*scientific.

The answer to all of this may be as simple as that of the foreign intern who, upon inquiring about a patient's health and being told, "Gee, Doc, I feel lousy," began to search the patient's scalp for *Pediculus Capitis.*

What's needed, I think, is an historical perspective. Physicians have always been an easy target. Remember Ambrose Bierce's definition in his *Devil's Dictionary?* "A physician is one upon whom we set our hopes when ill and our dogs when well." Also needed is an awareness that you're not being singled out for public opprobrium. Former CBS newscaster Walter Cronkite has said of journalism: "I'm sick and mighty tired of this profession of ours being constantly dragged into the operating room and dissected, probed, swabbed and needled to see what makes it tick."

So far as narrowing your collective image gap is concerned, consider:

- running for political office: In last month's elections, three MDs ran for the Senate, 10 for the House, and an average of one per state for state office.
- engage in community service.
- present a united and proactive front.
- support your medical societies.

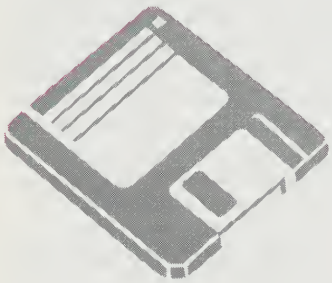
As John C. Nelson, MD, a member of the AMA's Board of Trustees, puts it: "As a profession, we have to work harder on our PR. Too often we get hit with cheap shots that stick because we haven't the time or avenue to respond. But it's critical that we take time to teach journalists and critics of medicine what it means to be a physician." That way you won't need any spin, doctor.

"A physician is one upon whom we set our hopes when ill and our dogs when well."

Mr. Woods, former editor and publisher of the **Canadian Medical Association Journal,** *is president of Healthcare Media International, Inc., Philadelphia, and a frequent commentator on health care issues.*

Rocking Along with Grateful Med®

Fred D. Baldwin



Grateful Med® isn't a physicians' rock group; it's a piece of computer software for searching MEDLINE®, a seven-million-record medical database. This second in a series of articles on new medical technologies available to physicians tells how to get Grateful Med and how to use it.

"It's easier than flipping through a book," a staff physician at a Geisinger clinic says about searching MEDLINE, a bibliographic database maintained by the National Library of Medicine and containing over seven million records.

One of the easiest ways to connect to MEDLINE from a personal computer in your office or home is by using a piece of communications software called Grateful Med. It's a bargain. Developed by the National Institutes of Health for use by physicians, it costs only $29.95. That includes a manual and free upgrades.

If you already have either an IBM-compatible or Macintosh computer and printer, the only other hardware you'll need for online searches is a modem, a device that enables your computer to make connections with other computers using regular voice telephone lines.

When you run Grateful Med, by typing the command "SEARCH," the first screen you see contains brief operating instructions that you can print out if you wish. The next screen, marked ACTION, invites you to select what you want to do. The first time you run the program, Grateful Med automatically puts you into a SETUP program so that you can enter local phone numbers. After that, you'll usually select "MEDLINE: Search Biomedical Journals."

You arrive at the main search screen. You're told, simply: "Input Your Search." If you're looking for a particular author or title, you just type entries into the labeled blanks. Remember, if the only author you know is someone named "Smith," you're going to get a lot of "hits" (records matching your search criteria), so add limits to your search. For example, you'll later be invited to limit the search to a specific journal or journals, if you want to do that.

More commonly, you'll be leaving author and title entries blank and doing a subject search. That's when Grateful Med begins to demonstrate that computer-assisted searching isn't just 10 times *faster* than using print references like *Index Medicus*; it's also *smarter*, in that you're more likely to find what you're looking for.

Move your screen cursor to the subject line, but don't type in your own first guess at a subject heading. Instead, get into the habit of tapping the "F10" key on your keyboard. This calls up MEDLINE's list of keywords, known as MeSH (Medical Subject Headings).

You'll next be invited to enter the first few letters of where you want to look in the list. For example, if you're interested in breast cancer, you might type BREAS. You'll immediately be shown a range of choices from BREAST, CYST to BREAST, XERORADIOGRAPHY. Grateful Med will also suggest that you check entries under MAMMA- and MAST-.

Some entries will be followed by a "+" sign, indicating that they contain more specific headings that you can inspect and select on screen. If you can't find an appropriate MeSH term, then you can go back to the "Input Your Search" menu and type one in, one word on each subject line.

After making your selections, make sure to check how your subject entries appear on your screen. Two subjects on a single line are the equivalent of a logical OR, meaning that you'll get everything on either subject. For example, if you search MASTECTOMY *or* POSTOPERATIVE COMPLICATIONS, you'll get not only hundreds of mastectomy entries but everything on postoperative complications after any surgery, including prostate surgery. You'll usually want concepts typed in on two different lines, as in MASTECTOMY *and* POSTOPERATIVE COMPLICATIONS. This will exclude citations that don't fit both headings combined.

***Mr. Baldwin, a contributing author from Carlisle, is currently co-authoring a book for Little, Brown & Co., with the working title,* Finding the Best Treatment: A Consumer's Guide to Medical Information.**

By the way, you're not online yet. If you've made a mistake, you can correct it by re-entering any line. What you've done so far has taken you only a couple of minutes and cost you no money.

You can make other choices if you wish, or you can use Grateful Med's defaults, such as limiting a search to articles published within the past three years. (In computerese, a *default* choice is what you get when you don't ask for anything special.) You can easily change Grateful Med's built-in assumptions—e.g., you can ask to see only English-language articles, going back in some cases as far as the late 1960s, or perhaps *only* review articles.

Connecting to MEDLINE

You're now ready to tell Grateful Med to make actual connections to MEDLINE. When you do, you'll be asked whether you want to see abstracts. On your first pass, you should probably say "no." There may be hundreds of articles on the post-operative complications of mastectomies, and it'll take more time online to recover abstracts than just citations. But don't worry if you get more hits than you expected; if you get more than 50, Grateful Med will show a few, then stop and ask if you want to continue or quit.

When you finally tell Grateful Med to search, you'll hear some buzzing and clicking as your modem dials MEDLINE, followed (if all goes well) by those coded greetings that computers exchange whenever they meet. Soon, what you want will scroll by on screen—fast. In fact, it'll go by faster than you can read it, and, abruptly, Grateful Med will hang up. You may think you've missed the whole show, but don't be alarmed: Your search results are saved automatically on your computer's hard disk.

If your search was an average one, it cost you about $1.25—billable to a credit card, if you wish. The exact amount depends on your actual time online, which in turn depends on the number of hits and whether you asked for abstracts as well as citations.

Grateful Med will give you a chance to review your search results and to save them to a permanent file; otherwise, they'll be erased the next time you go online. After you've narrowed your search to your satisfaction, you can make a second pass to ask for abstracts, or, if you know what you want, you can ask for abstracts by a unique item number.

If you want a copy of the full text of the article and your nearest medical library doesn't carry the journal, Grateful Med lets you order via a feature called Loansome Doc®. Charges per article may approach $8 by mail, $16 by FAX. Taking advantage of Loansome Doc will also require an extra one-time step to establish an account with a medical library.

If you prefer to search MEDLINE without using Grateful Med's menu prompts, you can select the DIRECT option on the initial ACTION screen. When you know the keywords you want, this approach can be faster, and it permits you to sharpen your search focus with a logical AND NOT function, as in MASTECTOMY *and* POST-OPERATIVE COMPLICATIONS, *and not* RECONSTRUCTIVE SURGERY. If you choose this direct route, you probably should order *The Basics of Searching MEDLINE* for $25.50; otherwise, the book isn't necessary. Remember that it's especially important to plan any direct search strategy offline, while the meter isn't running.

The National Library of Medicine is generous in its support of Grateful Med. You get free periodic upgrades and an automatic subscription to a newsletter called "Gratefully Yours," which describes changes to the library's databases and offers tips on effective searching. Grateful Med also enables you to search other MEDLARS® databases, including PDQ (Physician's Data Query), which lists cancer treatments and investigational protocols.

Overall, how difficult is the whole process? The first time you do it, it feels about like programming a VCR with a less-than-brilliant user's manual. That is, it's just puzzling enough to be a source of minor frustration. After that, it's almost as easy as using your TV set. It shouldn't faze any physician who wants near-instant references to over 3,600 medical journals and feels at least as smart as millions of people who regularly program VCRs to capture "I Love Lucy" re-runs. ⬡

Editor's note: Subsequent articles in this series will deal with other computer-related medical topics, including the Internet.

You can order Grateful Med from the National Technical Information Service at (800) 423-9255 (for credit card orders) or by FAX at (703) 321-8547. The cost is $29.95; for purchase orders, add a $7.50 billing fee. The IBM-DOS version is order #PB92-105444 (specify 3.5-inch or 5.25-inch disks); the Macintosh version is #PB93-502433. A Windows version is promised in 1995.

For more information about Grateful Med, call the National Library of Medicine's MEDLARS service desk at (800) 638-8480. They'll send application forms and will assign you a user code/password by return mail, which otherwise you'd have to get after receiving the software. You can also order a video tutorial on the personal computer version of Grateful Med for $12.95, or consult your nearest medical library for other MEDLINE reference materials.

INFANT MORTALITY RATE HITS ALL-TIME LOW

Pennsylvania, whose infant mortality rate hit an all-time low last year, is well on its way to meeting a national goal to lower the infant death rate by the year 2000. The state's overall resident infant death rate for 1993 was 8.5 per 1,000 resident live births—a 5.6 percent decrease from the 1992 rate of 9.0 and one of the largest decreases in recent years.

A breakdown by race shows an infant death rate of 19.5 for black residents, which is almost three times higher than the 6.6 rate for white residents. The good news is that the rate for black residents declined from 20.4 in 1992. The lowest recorded rate was 19.2 in 1991.

Residents of Hispanic origin recorded a rate of 10.5 per 1,000 live births, compared to 10.0 in 1992. The infant death rate for Hispanics had decreased every year between 1989 and 1992, from 12.6 to 10.0.

Still, according to the Pennsylvania Department of Health's State Center for Health Statistics and Research, the commonwealth is in line to meet the national health status objective set for the year 2000—to lower the infant death rate to 7.0 per 1,000 live births for all races and 11.1 for blacks.

Center statistics show that infant mortality for all races has been decreasing since 1915, when statewide reporting began. However, the decrease slowed during the 1980s and into the 1990s. For more information, contact the center at (717) 783-2548.

The information in this article is excerpted from "Statistical News" of the Pennsylvania Department of Health's State Center for Health Statistics and Research, vol. 17, no. 5, September 1994.

ADDRESSING EMERGING INFECTIOUS DISEASE TRENDS

Once expected to be eliminated as a public health problem, infectious diseases remain the leading cause of death and disability-adjusted life years (DALYs) worldwide[1] and are among the leading causes of death in the U.S.[2] Dramatic changes in society, technology, and the environment, together with the diminished effectiveness of certain approaches to disease control, usher in an era wherein the spectrum of infectious diseases is expanding, and many infectious diseases once thought to be controlled are increasing.

The term "emerging infectious diseases" refers to diseases of infectious origin whose incidence in humans has either increased within the past two decades or threatens to increase in the near future.[3] Examples in the U.S. are: drug-resistant pneumococcal disease, *Escherichia coli* O157:H7 disease, Hantavirus pulmonary syndrome, and Influenza A/Beijing/32/92.

To effectively address emerging infectious diseases, the U.S. Centers for Disease Control and Prevention (CDC) has developed a strategic plan emphasizing surveillance, research, and prevention activities necessary to maintain a strong defense against infectious diseases that affect, or threaten to affect, the public's health.

The goals of this plan address priorities for surveillance, applied research, prevention and control, and public health infrastructure, respectively:

Goal I: Detect, promptly investigate, and monitor emerging pathogens, the diseases they cause, and the factors influencing their emergence.

Goal II: Integrate laboratory science and epidemiology to optimize public health practice.

Goal III: Enhance communication of public health information about emerging diseases, and ensure prompt implementation of prevention strategies.

Goal IV: Strengthen local, state, and federal public health infrastructures to support surveillance, and implement prevention and control programs.

The strategy of this plan is based on repeated experience demonstrating that it is less costly to anticipate and prevent infectious disease threats than to react with expensive treatment or containment measures to public health crises. Public health policy and practice that combine investments in surveillance, laboratory research and training, and epidemiologic investigations with prevention and control efforts will reduce the impact of emerging infectious disease threats, in terms of both human suffering and economic losses.

NEW MAMMOGRAPHY GUIDELINES ISSUED

New clinical practice guidelines released in October by the Agency for Health Care Policy and Research (AHCPR) recommend ways to improve the quality of mammography and its potential for reducing deaths from breast cancer. The guidelines outline the roles and responsibilities of each health worker involved in the mammography process and of the woman undergoing mammography.

Among the recommendations:

- Women should schedule screening mammograms when their breasts are least tender and avoid using powders, lotions, or deodorants the day of their test, since they can affect the quality of mammograms.
- Mammography should be performed only with high quality, modern, dedicated x-ray equipment and with film processors set up specifically for the mammography film being used.
- Mammography facilities should give women test results within 10 days.
- Personnel who supply mammography services, including radiologic technologists, interpreting physicians, and medical physicists, should be qualified through appropriate training, expertise, certification, and licensing.
- Mammography facilities should have effective, ongoing quality control programs which include annual evaluation by a qualified medical physicist and more frequent quality control tests at specified intervals by a qualified radiologic technologist.

The new guidelines are the thirteenth published since 1992 by AHCPR, one of eight agencies that make up the Public Health Service of

the U.S. Department of Health and Human Services. Others published this year address: otitis media with effusion in children, treatment of pressure ulcers in adults, acute low back problems in adults, and post stroke rehabilitation.

Still under development by AHCPR are guidelines on: cardiac rehabilitation, screening for Alzheimer's disease, smoking cessation, anxiety and pain disorders, and colorectal cancer screening.

Single copies of guidelines are available free of charge from the AHCPR Publications Clearinghouse at (800) 358-9295, or from AHCPR Instant Fax at (301) 594-2800.

Other endeavors

AHCPR has also announced that it will fund a number of other endeavors:

- Grants totaling $9.7 million will support demonstrations of innovative ways to deliver health care services in rural areas of Maine, West Virginia, Oklahoma, Nebraska, Iowa, and Arizona.
- A $300,000 contract was awarded to the Research Triangle Institute, Research Triangle, North Carolina, to develop a model survey questionnaire and data collection procedures to survey consumers about their attitudes regarding access to health care, use of specific health services, health outcomes, perceived quality of care, and satisfaction with the care they receive.
- Through a $15 million, five-year cooperative agreement, the agency and the RAND Corporation will study HIV/AIDS health care, treatment costs, and sources of financing for patients. It is the largest, most comprehensive study of its kind on the subject.

TO SURVIVE IN THE CHANGING WORLD OF MEDICAL PRACTICE YOU NEED SOMETHING BEYOND CLINICAL COMPETENCE ...

CDAC Prepares for Implementation

Donald E. Harrop, MD

After announcing the acquisition of the Clinical Data Abstraction Center (CDAC) contract in last month's issue, I thought I should provide a little more detail about what CDACs are and how we expect they will work.

Clinical Data Abstraction Centers (CDACs) were created by HCFA to centralize all medical record abstraction activities involving national cooperative projects in two locations. According to HCFA, the centers would improve consistency, and be more efficient and more economical.

Consistency is the most important consideration when we look at the reason for abstraction of records, which is to accumulate data files of cases for analysis. Inconsistent or erroneous information would make the data worthless and could lead to incorrect conclusions when the data are analyzed.

The abstraction software to be used by the CDACs has evolved from the Uniform Clinical Data Set System (UCDSS) to the Medicare Quality Indicator System (MQIS). The reason for the switch was that the UCDSS was designed only to identify *individual* cases which required physician review. However, the MQIS is a system of quality indicators used to profile *patterns of care*.

This is what the PRO Health Care Quality Improvement Program (HCQIP) is all about: analyzing patterns in processes and outcomes of care rather than individual case review. And MQIS indicators are expected to be more reliable and valid measures of quality, because they will be tested in the field and should help to produce appropriate corrective actions and measurable changes in the quality of care.

CDACs will receive a monthly sample listing of cases from HCFA for the national projects and will request from the hospitals the medical records on that list. The hospitals will send the records directly to the CDAC; the records will not pass through the PROs.

These medical records will be abstracted, and all abstracted data will be forwarded to the HCFA Central Office. Data will then be forwarded by HCFA to the appropriate PROs, and the PROs will work with the hospitals to interpret and apply the findings of their analyses in the form of improvement projects, when necessary. Providers should keep in mind that PROs will continue to request medical records directly from hospitals for project data collection for local and/or statewide projects.

While this is the essence of the CDAC operation, there are other requirements in the CDAC Scope of Work. CDACs must implement an internal quality assurance program to be certain that only accurate, reliable, and consistent data abstraction is performed, and they will be subject to confidentiality of information requirements which are as strict as those required of the PROs.

In January 1995, implementation of CDAC operations by Dyn/KePRO will begin. The center's first objective will be to start collecting data to support the Cooperative Cardiovascular Project (CCP), a national effort to improve care for patients hospitalized for acute myocardial infarction (AMI). Thirteen MQIS quality indicators have been developed for the CCP/AMI module.

Instead of taking a sample of cases, which is how future MQIS modules are expected to be handled, 100 percent of AMI discharges which occurred during an eight-month period (January 1 through August 31, 1994) will be abstracted for the CCP/AMI. This is far more intensive than the sampling levels envisioned for other improvement projects. Later in 1995, CDACs will begin to abstract data to support other modules of the MQIS.

These new concepts—CDACs and the MQIS—represent two of the most important changes impacting the PRO program since its inception 10 years ago. When combined with the HCQIP, which is also comparatively new, we see the development of a completely different PRO program, one which has the potential to facilitate meaningful improvements in health care delivery.

"These new concepts—CDACs and the MQIS—represent two of the most important changes impacting the PRO program since its inception 10 years ago."

Dr. Harrop is president of the Keystone Peer Review Organization.

Keeping Up with Mergers Proves Challenging

Keeping up with health care mergers has proven challenging in 1994. Anyone following state and national headlines is sure to understand that each merger brings new light to the changing health care environment in Pennsylvania, as well as in the U.S.

To help Pennsylvania physicians deal with these changes, this publication is continuing its coverage by compiling the following list of recent mergers from press reports. It is by no means a complete list of all that is happening in a changing health care marketplace.

• St. Joseph Hospital, Lancaster, has formed a physician-hospital organization (PHO) with the Independent Physicians Association of Lancaster. The PHO is being marketed to area employers.

• Nazareth Hospital, Philadelphia, has signed an agreement to join the Franciscan Health System, Aston.

• The Graduate Hospital, Philadelphia, and an independent practice association (IPA) formed by members of the hospital's staff have established the Graduate Physician Hospital Organization (PHO) to directly contract with third-party payers needing tertiary-level specialty medical care for their members. It is believed to be the first specialty-owned PHO in the Delaware Valley and a potential referral source for the many primary care-based PHOs that predominate in the market.

• The University of Pittsburgh Medical Center, which has formed alliances with three local hospitals, is taking the idea one step further by creating a broad, regional health care network. The goal is to provide "cost-efficient care that is offered as close to the patient as possible," said Jeffrey Romoff, president of the medical center.

• Allegheny Health, Education, and Research Foundation and the Crozer-Keystone Health System will work together to train medical professionals. Under the agreement, some medical students, residents, and other health professionals educated at Hahnemann University, which is owned by Allegheny, will get further training at Crozer-owned hospital and medical facilities. Some students and residents from the Medical College of Pennsylvania, also owned by Allegheny, will participate in the agreement as well.

• In Central Pennsylvania, negotiations continue between Independence Blue Cross and Graduate Health System. Both sides have admitted to some significant hurdles that have yet to be resolved before a merger could occur.

• Penn State's Milton S. Hershey Medical Center and Capital Blue Cross are setting up jointly operated primary care facilities; the first opened last month in State College. The management organization is called Pennsylvania Medical Management, Inc. Additional facilities are slated to open in the Harrisburg-Hershey area in 1995.

• Continental Medical Systems, Inc., has purchased the stock of Keystone Medical Systems, Inc., Lemoyne.

• Three physician alliances—Central Pennsylvania Physician Organization, Blue Mountain Physicians, and Greater Susquehanna Physicians Alliance—are operating in Harrisburg.

• The Chambersburg Hospital and Waynesboro Hospital have formed a nonprofit organization, Summit Health Alliance. Chambersburg Health Services and Cumberland Valley Medical Services also participate.

• Jeanes Hospital, Philadelphia, is exploring an affiliation with the University of Pennsylvania Health System. The Germantown Hospital and Medical Center recently affiliated with the Penn system.

• National Medical Enterprises, Inc., Santa Monica, California, has purchased American Medical Holdings, Inc., in an effort to cut expenses to be better able to compete in an increasingly cost-conscious health care system.

Delegation Submitting 11 Resolutions to AMA

The Pennsylvania Delegation to the AMA has submitted 11 resolutions to the national organization's House of Delegates for consideration at its interim meeting this month in Honolulu, Hawaii. The resolutions call for:

• a level playing field for out-of-network physicians;

• HCFA support of state medical society involvement in Medicaid DUR programs, using Pennsylvania's program as a model;

• repayment of errors in Medicare reimbursement;

• creation of an anti-tobacco lobbying effort, with help from key federal agencies and major anti-tobacco organizations;

• study of the feasibility of health insurance for dependents up to age 26;

• federal legislation and regulation to limit access to medical records;

• reimbursement for additional opinions under managed care programs;

• protection of raw material suppliers from product liability litigation;

• legislation that Medicare provide long-term care coverage;

• confirmation that the House of Delegates continues to be the AMA's legislative and policy-making body; and

• an AMA sesquicentennial celebration in Philadelphia in 1997.

Look for results of these resolutions in upcoming issues of PENNSYLVANIA MEDICINE and *Executive Report*.

COUNTY NEWS

LCMS SPONSORS FIRST HEALTH CARE SYMPOSIUM

The Lackawanna County Medical Society (LCMS) on November 9 sponsored the first annual Northeastern Pennsylvania Health Care Symposium and Medical Trade Exposition. Developed specifically for health care professionals in the region, the symposium featured educational sessions and an exhibition hall of more than 30 products and services.

Anne D. Mullaney, Esq., specialist in health care law, Nash & Company, led a day-long educational session, "Responding to Managed Care: A →

Challenge for Physicians." She discussed the dynamics of the changing marketplace, the emergence of integrated delivery systems (IDSs), different types of organizations (physician-hospital organizations, physician organizations, etc.), and the legal and organizational issues associated with IDSs. Mullaney also emphasized antitrust issues, the emergence and governance of performance standards to measure utilization, and quality changes in reimbursement methods.

Randolph D. Smoak Jr., MD, a surgeon from Orangeburg, South Carolina, and a member of the AMA Board of Trustees, presented the evening keynote address, discussing "The Impact of Reform on the Health Care System." Also, State Society President John H. Hobart, MD, talked briefly on the importance of membership in organized medicine.

BEAVER COUNTY HOLDS SECOND MINI-INTERNSHIP

The Beaver County Medical Society in September sponsored its second mini-internship program, providing an opportunity for community leaders to experience, first hand, the delivery of health care from a physician's perspective.

Seventeen community leaders participated in the program, representing county business, social service, government, and health care organizations. Among the interns were State Representative Susan Laughlin and Beaver County Sheriff Frank Policaro Jr.

Faculty physicians included: David Applegate, DO; John Baska, MD; Lawrence Bell, MD; Carol Colvin, MD; Sarah Dusenberry, MD; Eric Ehrenberg, DO; Ida Gagliardi, MD; Brude Guerdan, MD; Sheila Marshall, DO; Thomas Michael, MD; Morry Moskovitz, MD; Paul Peindl, MD; Emilia Phillips, MD; David Rafalko, MD; D. H. (Skip) Ruth, MD; Patrick Sturm, MD; John Wright Jr., MD; and Gregg Zernich, DO. Dr. Sturm chaired the program.

ALLIANCE NEWS

PMSA INSTALLS 71st PRESIDENT

Freddie Persic was installed as the 71st president of the Pennsylvania Medical Society Alliance during its annual meeting, held in conjunction with the Society's October House meeting in Hershey.

Freddie Persic

She is the wife of Louis A. Persic, MD, and a member of the Centre County Medical Society Alliance, where she has served as president, treasurer, and on the Nominating Committee. She has been active on the state level in a number of positions and has been a delegate to the AMA Alliance for five years.

At its annual meeting, PMSA adopted several amendments to its bylaws and set its priorities for 1994-95, including legislation focusing on health system reform, membership, and health projects. Sheron Andrews, Dauphin County, was elected president elect.

PENN DEDICATES RHOADS PAVILION

Dr. Rhoads

The University of Pennsylvania Medical Center and Health System in October dedicated the Jonathan Evans Rhoads Pavilion, a nine-story, $69 million, state-of-the-art patient care facility.

The pavilion, located at 36th Street and Hamilton Walk, is named after internationally known physician Jonathan E. Rhoads, MD. A professor of surgery, university provost emeritus, former John Rhea Barton professor, and chairman of surgery, Dr. Rhoads is known throughout the world for his many medical accomplishments. He received the State Society's Distinguished Service Award in 1975 "in recognition of his service in the science and art of medicine, and for his life and activities which reflect great credit on the profession."

Over the past half century, he has held more than 20 hospital and university positions. He is the father of State Society President Elect Jonathan E. Rhoads Jr., MD.

The Rhoads Pavilion contains eight patient-care floors, five specifically designed and equipped for the care and comfort of inpatients from medical, surgical, and oncology services, and three designed for the evaluation, diagnosis, and treatment of outpatients from the Departments of Transplantation, Cardiology, Dermatology, and Urology.

The building also includes approximately 220,000 square feet of private and semi-private patient rooms, doctors' offices, laboratories, conference rooms, lounges, a three-story atrium, and bridge access to other buildings. The basement houses Penn's new 17-ton, four Telsa magnetic resonance imaging unit—one of only four such powerful MRI units in the world.

FARRAR BOOK OVERVIEWS CENTURY OF MEDICINE

The Society's Educational and Scientific Trust has published, *From Black Bag to White Coat: One Doctor's Story of 20th Century Medicine*, by George E. Farrar Jr., MD, FACP. The book is a panoramic view of the major advances in medicine over the past century as seen through the eyes of its author, who was always a witness to them and frequently a participant.

A retired physician who resides in Newtown, Dr. Farrar is a former president of the Pennsylvania Medical Society and the Philadelphia County Medical Society, former chairman of the Trust, and a past recipient of the Society's Distinguished Service Award.

Copies of the book are available by calling the Trust at (800) 228-7823, extension 431. The cost is $12.95 plus tax. Proceeds from the sale of the book will be used to provide gift copies to tomorrow's physicians, the medical students of Pennsylvania.

ANNALS APPOINTS NEW EDITOR

The Board of Regents of the American College of Physicians (ACP) last month announced the appointment of Frank Davidoff, MD, Philadelphia, as editor of *Annals of Internal Medicine*, the most widely cited medical-specialty journal in the world.

Dr. Davidoff, a renowned internist, endocrinologist, and medical educator, will assume the editorship

Dr. Davidoff

early next year. A graduate of Harvard University and Columbia University College of Physicians and Surgeons, he currently serves as senior vice president for education at ACP.

According to ACP, Dr. Davidoff "brings to the editorship a broad perspective with extensive experience in patient care, research, and education." He has been a frequent contributor to medical literature and has served as a reviewer for six prominent medical journals, including *New England Journal of Medicine*, *Journal of the American Medical Association*, and *Annals*.

He also served on the editorial board of the *Journal of General Internal Medicine* and writes a column on educational issues for *ACP Observer*, the official publication of the association.

Dr. Davidoff has received numerous honors, including the 1994 Laureate Award from ACP's Pennsylvania Chapter for demonstrated excellence in medical care, education, or research and dedicated service to the community.

PITTSBURGH INSTITUTE RECEIVES CANCER GRANT

A grant of $1 million has been awarded to the Pittsburgh Cancer Institute (PCI) of the University of Pittsburgh Medical Center by the Lucille P. Markey Charitable Trust for a research program in gene therapy for cancer.

"This major award provides recognition of the accomplishments already made in gene therapy by PCI faculty and will undoubtedly accelerate the pace of our progress with this very promising and innovative strategy for improving the treatment of cancer," said Ronald B. Herberman, MD, director of PCI and principal investigator.

According to Dr. Herberman, the long-term objective of the research program is to use this molecular approach to ameliorate, or possibly correct, deficiencies in metabolism or immunity, or to stimulate the body's immune defenses against cancer.

Investigators at PCI are currently exploring optimal ways of delivering genes into the body's cells where, for instance, they may provide either limited or self-renewing sources of a therapeutic substance.

The grant will help to fund the research program in three ways, by:

1) establishing specialized facilities for gene therapy research;

2) helping recruit scientists with expertise in designing gene therapies for lung cancer, breast cancer, brain tumors, and other types of cancers; and

3) supporting innovative and promising pilot projects in gene therapy.

To date, investigators in PCI's gene therapy program have developed a number of preclinical models for treating cancer. In the fall of 1993, PCI began a gene therapy trial for patients with advanced cancer.

The Lucille P. Markey Charitable Trust was established in 1983 to support and encourage basic medical research primarily at schools of medicine. To date, it has distributed more than $455 million in grants to institutions of higher learning across the country.

FEDERAL FUNDS EXPAND HIV/AIDS SERVICES

Newly awarded funds from the federal Ryan White program for underserved people with HIV/AIDS will allow staff of the Medical College of Pennsylvania (MCP) and Hahnemann University to substantially expand services for HIV/AIDS patients in Philadelphia.

The grant will underwrite "Partnership for the People," an innovative collaboration between both schools' hospitals, the Philadelphia Department of Health, and the Philadelphia Veterans' Affairs Medical Center. While each institution currently offers clinical and support services through separate programs, under the grant, they will pool resources, expertise, and outpatient services, including comprehensive primary and dental care, case management, and risk-reduction efforts.

Also, the grant will allow the collaborating institutions to hire:

- an additional physician to provide outpatient care at the MCP and Hahnemann facilities;
- two case managers to help patients access the public and private social services available to them; and
- a risk-reduction coordinator, who will assist outpatients with reduction of behaviors that place them at risk of HIV infection, and link clients with HIV counseling and testing services.

TEN PA HOSPITALS RECEIVE TRAUMA ACCREDITATION

The Pennsylvania Trauma Systems Foundation has reaccredited Lehigh →

DRAWING HELD TO INCREASE AWARENESS OF NEW CENTER: The Society's Center for Drug Education and Information sponsored a drawing at the annual business meeting in October to increase awareness of its programs to educate physicians about drug utilization. Pictured (left to right) are: Barbara A. Layne, director of professional drug education and information, and Society Immediate Past President Martin A. Murcek, MD, who drew the winning name. Jacki Allender of Belleville, a member of the Pennsylvania Medical Society Alliance, was the winner of the grand prize—a gourmet food basket.

Valley Hospital as a Regional Resource Trauma Center. This designation, valid until September 30, 1997, is the highest accreditation awarded by the foundation and was given to nine other Pennsylvania hospitals.

To receive this accreditation, a hospital must meet standards established by the American College of Surgeons, including having trauma surgeons, nurses, and support personnel, and equipment immediately available to treat the most serious life-threatening and disabling injuries. A surgery residency teaching program is also required to support the attending surgeons.

In addition to the Regional Resource Trauma Center designation, Lehigh Valley Hospital was awarded additional qualifications in pediatric trauma, a three-year certification. This designation was also given to Penn State's Milton S. Hershey Medical Center, Hershey, and Allegheny General Hospital, Pittsburgh.

Lehigh Valley Hospital was named Pennsylvania's first Level I Trauma Center in 1981. Nearly 1,400 critically injured victims of motor vehicle and industrial accidents are treated in the hospital's trauma program each year.

GEISINGER OPENS CHILDREN'S HOSPITAL

Geisinger Medical Center, Danville, has announced the opening this month of the Janet Weis Children's Hospital, the first rural acute-care children's hospital in America.

The new hospital consolidates Geisinger's inpatient pediatric treatment centers for better communication and care. Among its "child-friendly" features are:

- a colorful, playful, non-intimidating design;
- private rooms with a TV, VCR, the Disney Channel, and places to hang "kid stuff";
- a personal message board at each room entrance;
- counters at nursing stations and other areas cut low for children;
- outdoor play decks;
- three playrooms—one is for children taking immunosuppressant drugs in the hematology/oncology-nephrology area; and
- displays of children's art from school children from throughout Pennsylvania.

NEW PRESIDENT APPOINTS COUNCILS, COMMISSIONS

State Society President John H. Hobart, MD, has appointed the following physicians as members and officers of the Society's councils and commissions for the 1994-95 term:

Council on Education and Science

Chair—Richard L. Decker, MD, *Blair*
Vice Chair—Richard D. Baltz, MD, *Dauphin*
Richard T. Bell, MD, *Berks*
Joseph B. Blood Jr., MD, *Bradford*
Gene L. Cary, MD, *Dauphin*
John J. Dennehy, MD, *Montour*
William R. Dubin, MD, *Philadelphia*
Robert J. Fagioletti, MD, *Washington*
George D. Hanzel, MD, *Cambria*
Daniel B. Kimball Jr., MD, *Berks*
Lila S. Kroser, MD, *Philadelphia*
Edward G. Liszka, *Dauphin*
Stanley P. Mayers Jr., MD, *Centre*
Robert S. Mirsky, MD, *Bucks*
John H. Moyer, MD, *Dauphin*
Nancy S. Nieland-Fisher, MD, *Allegheny*
Harry P. Palkovitz, MD, *Allegheny*
Robert S. Pyatt Jr., MD, *Franklin*
Russell J. Stankiewicz, MD, *Union*
Bryce Templeton, MD, *Philadelphia*

Commission on Continuing Medical Education

Chair—Robert S. Pyatt Jr., MD, *Franklin*
Robert C. Aber, MD, *Dauphin*
Judith A. Black, MD, *Allegheny*
Paul W. Dishart, MD, *Allegheny*
John H. Esbenshade II, MD, *Lancaster*
Walter I. Hofman, MD, *Montgomery*
Julian Katz, MD, *Philadelphia*
Brian W. Little, MD, *Lehigh*
Carmela F. deRivas, MD, *Montgomery*
Bradford K. Strock, MD, *Dauphin*
Michael J. Warhol, MD, *Philadelphia*

Council on Governmental Relations

Chair—Charles D. Hummer Jr., MD (Delaware)
Vice Chair—Lawrence L. Altaker, MD (Dauphin)
A. Craig Brown, MD, *Erie*
David L. Cohen, MD, *York*
James F. Evans, MD, *Montour*
Joseph A. Giordano, MD, *Mercer*
Andrew W. Gurman, MD, *Blair*
Carolyn J. Kubik, MD, *Allegheny*
Lynn Michele Lucas-Fehm, MD, *Philadelphia*
John S. Parker, MD, *Westmoreland*
Gordon S. Perlmutter, MD, *Berks*
W. Gale Reish, MD, *Union*

Council on Medical Economics

Chair—James J. Houser, MD, *Venango*

State Society Applauds Tobacco-Free Pharmacies

More than 400 pharmacies statewide that do not sell tobacco products were recognized by the State Society in November for their anti-smoking stance. During a news conference in the State Capitol the day before the American Cancer Society's "Great American Smokeout," several representatives of the 400 pharmacies received certificates for being "tobacco-free."

The State Society, in cooperation with the Pennsylvania Pharmacy Association, has sponsored the pharmacy recognition program since 1991; it awarded certificates to 77 pharmacies last year. Immediate Past President Martin A. Murcek, MD, told reporters, "I applaud these more than 400 pharmacies across Pennsylvania for standing on the belief that they are in the business of helping sick people, not helping make people sick."

For additional information about this program, contact the Society's Department of Public Affairs, (800) 228-7823.

CLASSIFIED ADVERTISING

PHYSICIANS WANTED

Western Pennsylvania—Board Certified or prepared emergency physicians needed for staffing a community hospital emergency department near the Ohio/Pennsylvania border. Please send CV to P.O. Box 99431, Pittsburgh, PA 15233-0431.

Pennsylvania—Physician group seeks full-time and part-time physicians for an emergency department of community hospitals in central and western Pennsylvania. Please send resume to P.O. Box 99431, Pittsburgh, PA 15233-0431.

Pittsburgh, Pennsylvania—Penn Group Medical Association (PGMA), a 100-physician multi-specialty group practice affiliated with the largest HMO in Pittsburgh, is seeking BE/BC physicians in: family practice, internal medicine, pediatrics, ob/gyn, and psychiatry. We are formally affiliated with major teaching hospitals and leading community hospitals in Pittsburgh. PGMA serves eight ambulatory care centers, all conveniently located near cultural, educational, recreational, and corporate activities. Excellent salary and fringe benefits. For confidential consideration contact: Angela Lascola, HealthAmerica, 5 Gateway Center, Pittsburgh, PA 15222, or call collect (412) 553-7502.

Emergency Physicians—Emergency Physician Associates is seeking quality ED physicians for a variety of practice opportunities. Director and staff positions are available. EPA contracts with hospitals in NJ, PA, MD, and NC for the provision of emergency medicine, urgent care and industrial/occupational health services. Our client hospitals are located in rural to urban areas with patient volumes ranging from 10,000 to 75,000. At EPA we offer physicians competitive compensation, flexible schedules and shifts, occurrence-based malpractice insurance, a variety of practice settings to choose from, cooperative working environments, and supportive medical directors and corporate staff. Interested candidates may contact EPA at 1-800-848-EPA-1.

Primary care physicians for Cincinnati, Ohio. Rated #1 city in the nation. Large, successful physician owned organization offers autonomy, excellent income/pension, signing bonus, benefits, call, vacation, and relocation. (800) 880-2028.

Physician—Part-time positions available in Westmoreland and Cambria counties. Daytime hours, no weekends. Low stress, friendly atmosphere. An excellent opportunity for the family practice physician looking to cut back on the responsibilities of a full-time practice. Call (412) 837-2525.

Harrisburg—Established young B/C internist seeks associate in outpatient practice. P/T with F/T potential. Phone (717) 534-2636 evenings, or write: 1800 Linglestown Rd., Suite 200, Harrisburg, PA 17110.

Practice Opportunities - Openings Nationally in all specializations. Excellent salary and benefit packages including partnership opportunities, 100% paid malpractice, moving and relocation expenses, license assistance, up to 6 weeks paid vacation. On-site interview expenses paid. Toll-free 24 hours (800) 759-0104. Or send CV to La Salle Medical Group, 6599 East Thomas Rd., Suite 2097, Scottsdale, AZ 85251.

Philadelphia—Major university health system seeking primary care physicians in Philadelphia and suburbs. Contact: Albert Yannelli, Yannelli, Randolph and Co., 997 Old Eagle School Rd., Ste. 202, Wayne, PA 19087; 1-800-292-6354; Fax 610-964-1619.

Clinical Lab Director—Seeking physician to direct blood lead analysis operations in Philadelphia area. Must be an MD or DO licensed in Pennsylvania. Certification in anatomic and/or clinical pathology by ABP or AOBP or equivalent qualifications or 1 year laboratory training during medical residency or 2 years experience in directing/supervising a high complexity testing laboratory also required. With Friends Like These...

Lee H. McCormick, MD

Editor's note: This article was originally published in the Allegheny County Medical Society Bulletin, then reworked for the AMA Hospital Medical Staff Section's monthly news insert featured in the Medical Staff and Physician Organization Legal Advisor. This is excepted from the AMA-HMSS version.

Two years ago at an AMA Hospital Medical Staff Section (HMSS) Governing Council luncheon, Dick Davidson, president of the American Hospital Association (AHA), explained AHA's grand vision for the health care system of the future. He described a plan for physicians and hospitals to work together as partners. Recognizing skepticism by the Governing Council, he asked that prior differences be set aside, and assured everyone that physicians and hospitals truly could be equal partners in community care networks.

Physicians across the country began talking to their hospitals about various forms of integration. Medical staffs and hospital administrators explored ways in which their organizations could cooperate for mutual benefit. They forgot previous problems and disagreements. It appeared that, at long last, physicians and hospitals could work together as partners.

It kinda makes you feel all warm and fuzzy, doesn't it? Well forget it! If it is warm and fuzzy you want, find a teddy bear, not a hospital!

The AMA, as part of its health system reform efforts, developed legislation that was introduced into Congress as the Hatch-Archer bill. The bill, which AHA helped to structure, changes current antitrust laws that prevent physicians from collectively forming networks and, in fact, facilitates network formation by *all* providers, including hospitals.

But, on June 16, 1994, AHA Executive Rick Pollack wrote to Senators Moynihan, Kennedy, Metzenbaum, Congressmen Gibbons and Brooks, and the entire Senate Finance Committee, strongly opposing antitrust exemptions for physicians, characterizing them as "unnecessary and potentially dangerous." He said, "Rather than advocating the adoption of statutory exemptions, AHA seeks an essential examination and clarification of antitrust policies in order to encourage and facilitate development of integrated multi-provider networks." He added that "AHA will not support legislative proposals to grant blanket immunity to providers whose activities have no or very limited potential for efficiencies...particularly where exemptions could result in increased health care costs and foster fragmentation of health care delivery."

James S. Todd, MD, executive vice president of the AMA, followed with a letter to Senator Moynihan, pointing out that AMA and AHA part company on the issue of whether reforms should facilitate the development of networks by a multitude of providers or by a single group, and that it is increasingly apparent that hospitals want to control networks without competition from physicians. An article from the June 13, 1994, edition of the *Washington Post* was quoted as saying that "hospitals are trying to get control over physicians and the physicians' revenue stream before becoming completely obsolete."

I, too, expressed my concern about AHA's position by writing, on behalf of the AMA-HMSS, to Mr. Davidson. In a July 29 reply, he reaffirmed AHA's opposition to the Hatch-Archer bill and stated that "while we have identified antitrust concerns that need to be addressed, AHA does not view broad statutory exemptions from the antitrust laws as necessary or appropriate for development of integrated delivery system." Since AHA continues to pursue antitrust reforms that would facilitate the formation of hospital networks, we can assume that the "antitrust concerns that need to be adressed" are those that only favor hospitals, *not* physicians.

What does this mean for medical staff physicians? Consider the following: 1) Virtually every hospital in the country has formed, is forming, or plans to form a physician hospital organization (PHO); 2) PHOs are business organizations; and 3) Do you want a business partner who is motivated by self-interest? Remember that hospitals need physicians more than physicians need hospitals.

If you are involved in the formation of a PHO, I offer these suggestions: Ask your hospital administrator if they support AHA's position opposing antitrust reform for physicians. If they do not agree with the position, ask if they are willing to write to AHA voicing their opposition, and send a copy of the letter to the AMA-HMSS. If they won't oppose AHA's position, draw your own conclusions.

AHA has implied that they want to be friends with physicians. With friends like these, who needs enemies?

Dr. McCormick, a Pittsburgh physician specializing in the treatment of substance abuse, is chair of the AMA's Hospital Medical Staff Section and a member of the State Society's Board of Trustees.

CONGRESS JUST CUT DOCTORS' RETIREMENT SECURITY BY $34,000 A YEAR– AND WANTS $2,700 MORE IN TAXES NOW.

Harry R. Tyler, Principal

Last year, Congress cut 36% from your retirement plan[1]. That means higher income taxes now[2], less money in your retirement fund to grow–and $34,000 less annual income when you retire[3].

The impact on your retirement will be dramatic–unless you act now. To have $100,000 a year of retirement income you will need at least $1.3 million in retirement assets[4].

Find out how you can protect your retirement security and increase your own plan contributions–without increasing contributions or costs for other employees.

Call 1-800-79-TYLER for a free copy of the Tyler Consulting Physician Retirement Security Checkup–including a 20-page booklet entitled, "Building a Secure Future." Call today.

TYLER Consulting
Incorporated

GOSHEN EXECUTIVE CENTER • SUITE 200C • 1450 EAST BOOT ROAD • WEST CHESTER, PA 19380
1-800-79-TYLER
(610) 344-0900 FAX: (610) 344-7656

The following assumptions are based on a physician age 45; earning between $140-250,000 per year; retiring at age 65; annual investment growth of 10%; and a 20 year payout (8%) at retirement.

1. Beginning 1/1/94, maximum compensation eligible for contribution to a profit-sharing plan is $150,000–36% less than $235,840 before. Instead of a $30,000 contribution, only $22,500 can be contributed–7,500 less annually.
2. $7,500 additional income is taxed at 36% (marginal tax bracket based on $140-250K of taxable income.) The annual increase in your tax is $2,700.
3. $7,500 less is invested for 20 years. Assuming 10% annual return, your retirement fund is reduced by $429,000– cutting retirement security by $34,000 every year.
4. To maintain a $100,000 income (inflation-adjusted at 4%) for 20 years requires $1,348,674 in retirement assets.

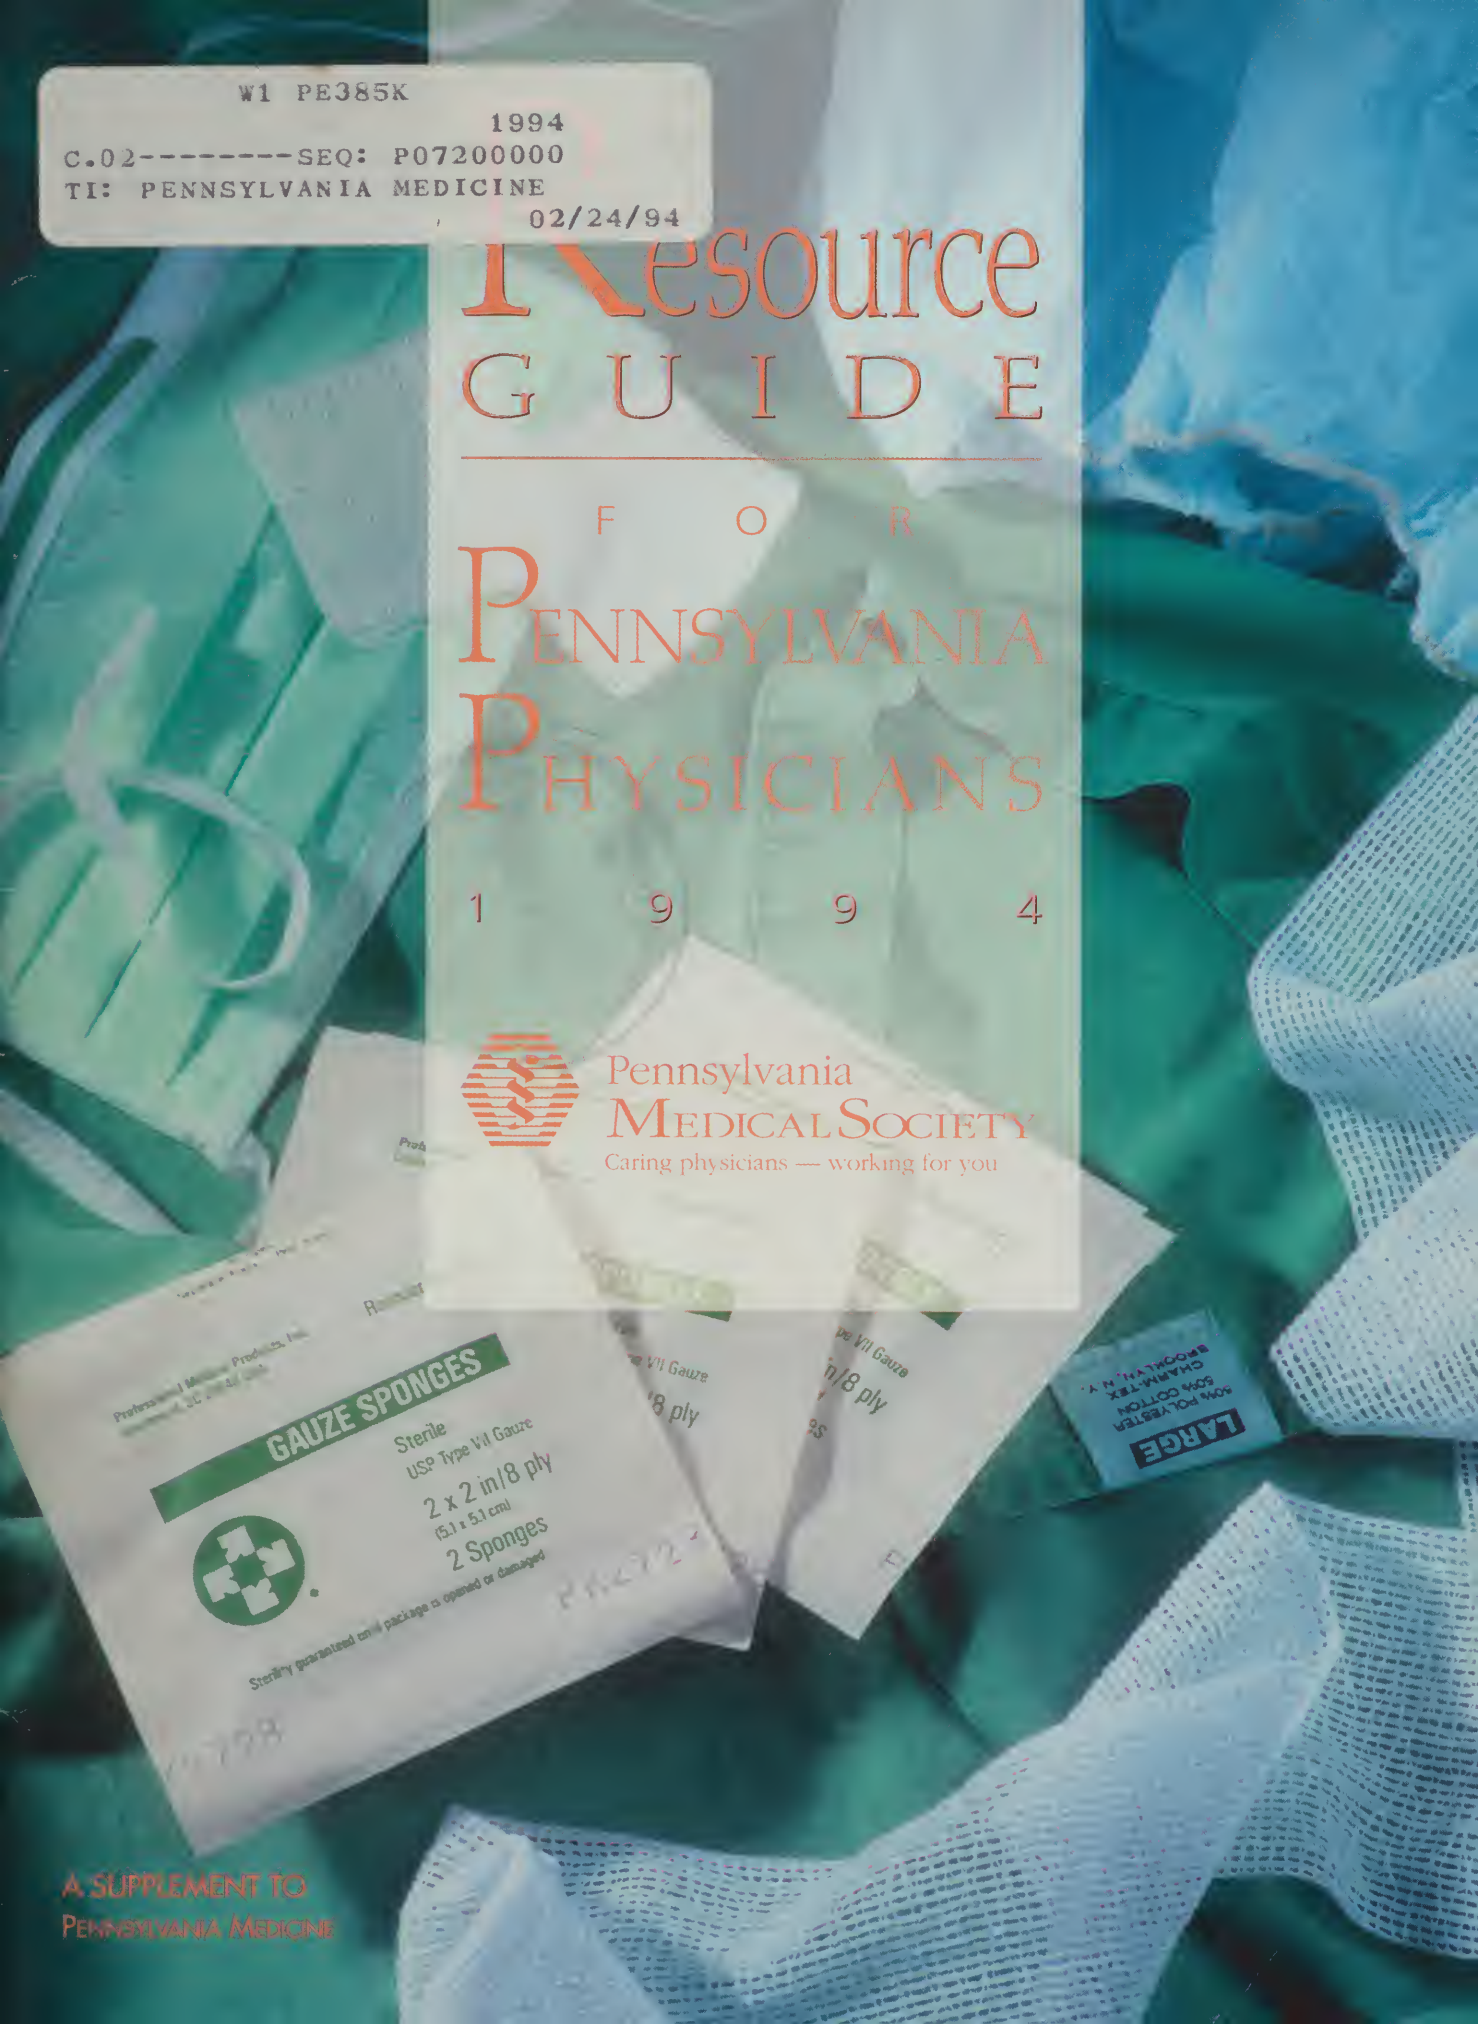
Resource GUIDE

FOR

PENNSYLVANIA PHYSICIANS

1994

Pennsylvania
MEDICAL SOCIETY
Caring physicians — working for you



A SUPPLEMENT TO
PENNSYLVANIA MEDICINE

About this guide ...

This time of change in our nation's health care delivery system is a period of critical importance to physicians and their patients. It is a time when there is a greater need than ever for two-way communication between members and the organization which seeks to represent their interests and serve their practice and personal needs.

The third annual **Resource Guide for Pennsylvania Physicians** *is one way that the Pennsylvania Medical Society is working to make it as easy as possible for member physicians to take full advantage of the many services and resources the Society offers.*

This 1994 guide is a single-source reference book provided free of charge to the Society's 21,000 members.

It includes a directory of the many physicians throughout the commonwealth who serve on the councils, committees, and special sections conducting Society business at the direction of the House of Delegates.

You also can use this guide to order Society-developed products and services available free of charge or at discounted prices to members.

The guide provides the information you need to reach the Society's subsidiaries and related organizations — the Pennsylvania Medical Society Liability Insurance Company (PMSLIC), the Keystone Peer Review Organization (KePRO), The Educational and Scientific Trust, the Pennsylvania Medical Society Alliance, and the Pennsylvania Medical Society's Political Action Committee (PAMPAC).

It also includes Society administrative departments and staff, and a handy directory of important telephone numbers.

Keep this guide as a convenient reference and reminder of the many resources available to you through your State Society. But remember that your Society is continually seeking new ways to serve your interests in this time of change and challenge.

Use the Society's toll-free number for help or for information about new resources that may not appear in this guide:

$12.75 each
Order # **EST37**

Communicating With Patients

►Pennsylvania Medicine
The monthly publication of the Pennsylvania Medical Society, free to all members, features articles exploring many aspects of today's practice of medicine: legislative news; colleagues' achievements; regulatory analysis; public health guidelines; reimbursement and medical economics advice; messages on controversial issues from physician leaders. The August issue is the official Directory of the State Society's membership.
Use of the classified and display advertising portions to contact 20,000 physicians every month with your business needs. Pennsylvania Medicine is designed to inform, as well as to serve, Pennsylvania physicians.

◄Communications
Whether communicating with your patients, speaking in your community, or contacting legislators or colleagues, the State Society's Division of Communications and Public Affairs is there to help. Contact the Division for a complete list of free materials. Some items currently available include:

- **Public Opinion Survey**—Pennsylvanians' opinions on bioethical and health care reform issues.
- **Dignity in Death/Dignity in Dying**—a complete guide to writing a "living will"; includes an actual will and wallet card. First 100 free to each member; additional by special order.
- **Seat Belt Safety**—tips for parents on use of children's car seats.
- **Youth Against Tobacco**—materials to encourage youths to avoid tobacco use and join the campaign against smoking
- **Sample speeches**—draft of texts you can use if speaking before community groups.

Products AND SERVICES

Pennsylvania Medical Society Endorsed Insurance Products

Pennsylvania Medical Society Liability Insurance company 1 (800) 445-1212

Throughout its 16-year history, PMSLIC has set its course with the guidance and the counsel of physicians. This peer governance sharply distinguishes the company from other carriers in Pennsylvania. Because of its dedication to controlling the professional liability problem, rather than reacting to it, PMSLIC has positioned itself to continue to be the leader in serving Pennsylvania physicians in their professional liability insurance needs. If you are not currently a PMSLIC insured, contact the company at 1 (800) 445-1212 and ask a Policyholders Service Representative how PMSLIC may better serve you and your practice.

Risk Management

Medical-Legal Correspondence Course
A course providing basic information on how to practice safer, more defensible medicine. Upon completion, 12 hours of continuing medical education credit are awarded.
Member price: $125 Order # **RMMLC27**

Patient Rx Newsletter
A bi-monthly newsletter on current litigation trends and risk management issues affecting medical practice.
Order # **RMPRN28**

Patient Telephone Call Record Pads
Member price: 10 pads: $12.72; 20 pads: $25.44
Order # **RMTCR29**

Consult
A two-page home-study publication distributed quarterly to all Society members that addresses a variety of medical-legal topics. *Member Price: No Charge* Order # **RMCON30**

Physician's Medical Legal Guide for the Office
A practical reference for physicians and office staff. Includes legal requirements for medical records, confidentiality, informed consent, and termination of physician-patient relationship, and more. A 30-minute audiotape on risk management for office staff is also available.
Member Price: No Charge Order # **RMMLG31**

To order by phone call: 1 (800) 445-1212

Judicial Council

Judicial power of the Society is vested in this council. Its decisions are considered final subject to the right of appeal to the Judicial Council of the American Medical Association. The council considers such matters as rights or standing of members, controversies falling under the Society's bylaws, or principles of medical ethics and controversies between two or more component societies or their members.

Finance

The Committee reviews proposed programs or projects as they occur during the year and presents the Board with cost estimates and advises on availability of funds before the Board acts on these. The Committee also regularly reviews the Pennsylvania Medical Society investment portfolio. The Committee annually reviews with the auditors the audited financial statement, internal checks and balances, and operating and accounting procedures. The Finance Committee presents the annual budget of the Society to the Board.

About your membership ...

Your membership in the Pennsylvania Medical Society supports a wide range of services and resources. These include:

- *continuous monitoring of legislation affecting the practice of medicine at the state and federal levels, experienced representation in public hearings and person-to-person meetings, and immediate action, when warranted, by physician Legislative Action Teams and Key Contacts.*
- *free help with reimbursement problems and questions through the Society's Reimbursement Resource Program, whose services include:*
  - *—advice regarding disputes with third-party payers*
  - *—Pennsylvania-specific reimbursement publications, and*
  - *—assistance in the development of medical and reimbursement policy with third-party payers.*
- *evaluation, development, and approval of Continuing Medical Education programs.*
- *two monthly publications,* Pennsylvania Medicine *and* Executive Report.
- *personal support services through the Physicians's Health Programs and through the educational, support, and student loan programs of The Educational and Scientific Trust.*
- *representation of physicians' interests in public health initiatives and activities.*
- *special publications, workshops, seminars, position papers, and other resources developed especially for Pennsylvania physicians. Topics include:*
  - *—managed care, integrated delivery systems, laws and regulations affecting medical practice, coding, federal clinical laboratory requirements, health system reform, and many other subjects of concern or interest to physicians and their staffs.*
  - *—professional public relations and media relations activities, including editorial board visits, press releases, press conferences, responses to media reports, letters to the editor, and timely response to media inquires.*
